INTRODUCTION

The City of Albuquerque – Department of Municipal Development (Traffic Engineering Design Division) has requested that Souder, Miller & Associates conduct at speed study along Aztec Road in northeast Albuquerque.

1.A. PROJECT PURPOSE

A speed study on Aztec Road from Charleston Street to Louisiana Boulevard was conducted to determine the following:

- Evaluate the 85th percentile speed along Aztec Road at three (3) locations;
- Calculate average and daily peak hour traffic volumes along Aztec Road.

As part of this study, an evaluation and cataloging of existing roadway conditions, collection of historical ADT, and crash data will be completed.

1.B. PROJECT DESCRIPTION

The study area will be a 0.40 (2112.00 LF) mile section of Aztec Road from Charleston Street to Louisiana Boulevard. Figure 1.B.1. below displays the study location and Figure 1.B.2. on page 2 displays the project limits.

FIGURE 1.B.1. STUDY LOCATION

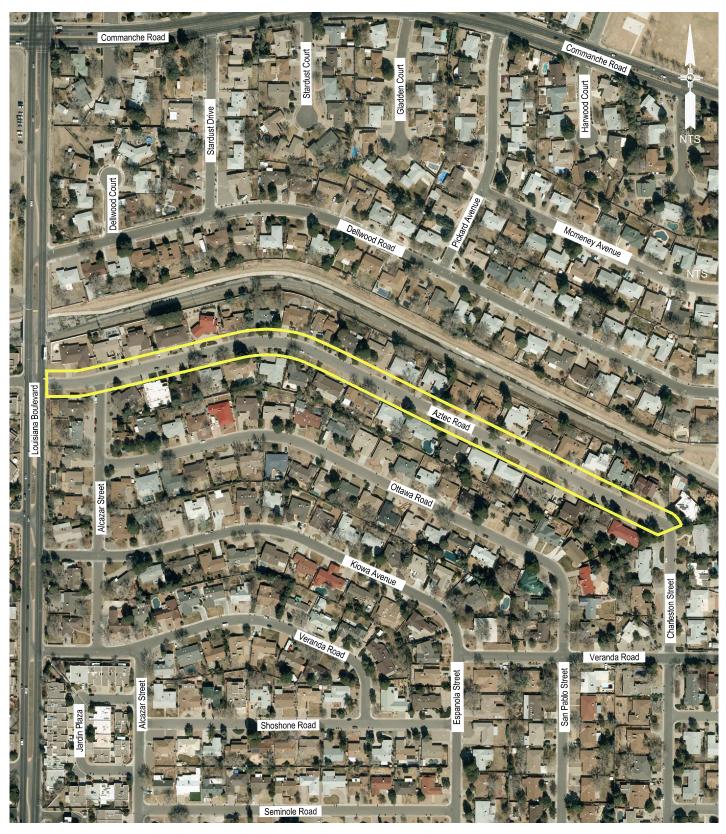

FIGURE 1.B.2. STUDY LIMITS

Engineering • Environmental • Surveying

1.C. BACKGROUND OF SPEED LIMITS

Speed limits are established on roadways of virtually all classifications, from interstate freeways to low volume local streets. The primary purpose of speed limits is to give motorists clear instruction as to what is a reasonable speed for them to drive at while traveling on a given roadway.

Among regulatory signage, speed limit signs arguably contain the most critical information that motorists need to be informed of while driving (next to stop signs, which are considered the highest impact regulatory sign). Drivers unfamiliar with a roadway often do not realize what characteristics the roadway has, and properly established speed limit signs give them the information they need to drive the roadway safely.

The NMDOT has guidelines for analyzing and establishing posted speed limits; the following text is based on one such example:

Realistic posted speed limits are of public importance for many reasons:

- They invite public compliance by conforming to the behavior or the driving majority
- They give clear reminders of safe and reasonable speeds to non-conforming violators
- They offer the most effective tool for law enforcement of safe driving
- They will minimize public antagonism toward law enforcement that results from unreasonable regulations

Improperly, or artificially low, posted speed limits can cause problems for state and local agencies for several reasons:

- They do not encourage voluntary compliance, since they do not reflect the behavior of the majority
- They make the behavior of the majority unlawful
- The maximize public antagonism toward law enforcement, since the perception is that the police are enforcing a "speed trap"
- The create a bad image for a community in the eyes of tourists / visitors

1.D. SETTING SPEED LIMITS

In accordance with Section 66-7-303 of the New Mexico Criminal and Traffic Law Manual, the speed limit on state highways shall be set by the Cabinet Secretary of the Department of Transportation, based on an engineering survey and traffic investigation that includes the following parameters.

- Spot speed studies (typically consisting of 100 vehicles)
- Roadway geometry/number of lanes
- Roadside environment and characteristics
- Building setbacks (if within a commercial business district)
- Driveway and intersection spacing/density
- Historical crash data for the roadway study area

Many speed limits are established using the theory of 85th percentile. Out of the (typically) 100 vehicles surveyed, beginning with the fasted vehicle speed recorded the 15th vehicle from that speed is determined to show where the 85th percentile speed is. This is assuming that most drivers (85%) drive within reasonable limits. The posted speed limit can be established and is usually the 5 – mph increment just below the 85th percentile speed. For example, if the 85th percentile speed

has been determined by an engineering survey to be 57 mph, the posted speed would be 55 mph. This method of posting speed limits allows for a reasonable posted speed limit that can be enforced by local agencies, without creating a speed trap.

For surveys with a different amount than 100 vehicles, the 85^{th} percentile speed is determined by the following formula: 100/15 = # of vehicles surveyed/X (where x = the vehicle at the 85^{th} percentile). For example, a 50 vehicle survey would result in:

$$\frac{100}{15} = \frac{50}{x}$$

Where x = 7.5, or the 8th vehicle in the survey

Other methods are frequently used to further analyze the posting of speed limits – these are the mode, median, and geometric mean:

- Mode is the most frequently clocked vehicle speed in a given survey. For example, in a 100 vehicle survey
 where 12 vehicles were clocked traveling 55 mph and no other speed was observed as frequently, the
 mode is 55 mph.
- Median is the numerical midpoint of a given survey. For example, in a survey of 100 vehicles, the speeds of the 50th and 51st vehicles are added and divided by 2 to obtain the median speed. If the 50th vehicle of such a survey was traveling at 56 mph and the 51st vehicle was also traveling at 56 mph, the resulting median would be (56 + 56)÷2 = 112÷2 = 56 mph
- Geometric mean is described as follows: "an average of a set of numbers that is calculated by multiplying all the numbers ("n"), and taking the nth root of the total."

Formula for Geometric Mean:

Geometric Mean =
$$((X_1)(X_2) \dots (X_n))^{1/N}$$

 $X = \text{Individual score (speed)}$
 $N = \text{Sample size (number of scores)}$

Geometric Mean Example:

Sample speeds = 51, 52, 55, 58, and 60 mph

Step 1:

N = 5, the total number of values, $\frac{1}{N} = 0.2$

Step 2:

Determine geometric mean using the formula.

Geometric Mean =
$$((51)(52)(55)(58)(60))^{0.2} = 55.09 \, mph$$

In most cases, the geometric mean of a speed study will be of similar value of the median, often within 1 to 2 mph of either side of the median. In the above example, the median speed would be the third vehicle surveyed (55 mph), and the geometric mean is 55.09 mph.

2. EXISTING CONDITIONS

2.A. COUNT LOCATIONS

The study area included three (3) volume and speed count locations which were at the following locations:

- Aztec Road East Charleston Street to mid Aztec Road;
- Aztec Road Middle Mid Aztec Road to Alcazar Street:
- Aztec Road West Alcazar Street to Louisiana Boulevard.

Figure 2.1. on page 6 displays the approximate traffic count locations.

2.B. EXISTING CONDITIONS

Figure 2.2. on page 6 displays the existing typical section of Aztec Road. Within the study limits, there are approximately 40 driveways that provide access to residential homes. Also to be noted, the posted speed limit within the study limits is 25 mph.

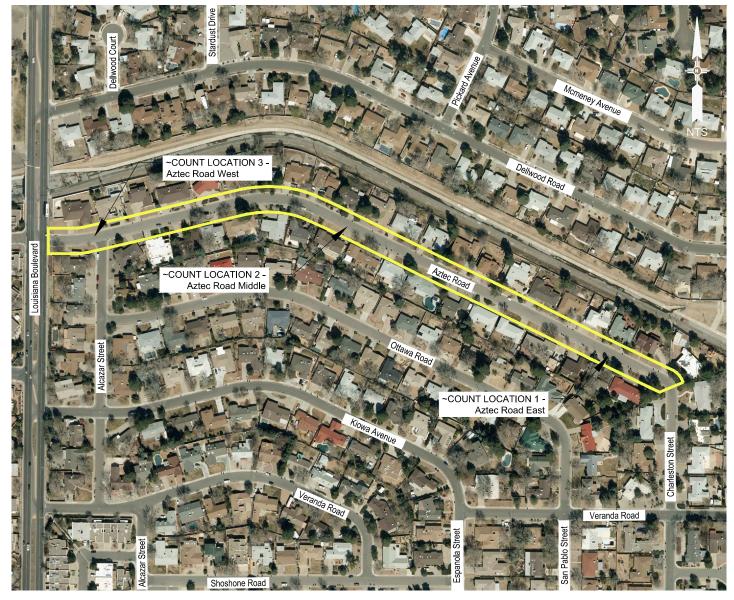

FIGURE 2.1. COUNT LOCATIONS

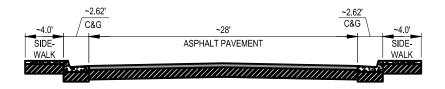

FIGURE 2.2. EXISTING AZTEC ROAD TYPICAL SECTION

3. DATA

3.A. ADT

The ADT for the three (3) count locations are listed below in Table 3.A.1.

| Table 3.A | 1. | | | | | |
|---------------------|-----|-------|-------|--|--|--|
| Aztec Road ADT | | | | | | |
| Count Location | EB | WB | ADT | | | |
| Aztec Road (East) | 116 | 120 | 236 | | | |
| Aztec Road (Middle) | 127 | 124 | 251 | | | |
| Aztec Road (West) | 159 | 156 | 315 | | | |
| Average | 134 | 133.3 | 267.3 | | | |

The Aztec Road study area directional ADT ranges from 116 to 159 vehicles per day.

3.B. PEAK HOUR TRAFFIC VOLUMES

The peak hour traffic volumes for the three (3) count locations are shown below in Table 3.B.1.

| | | Table 3.B.1. | | | |
|---------------------------|-----------------------|--|------------------------|--|--|
| | | Aztec Road Peak Hour Traffic Volumes (| (vph) | | |
| Count Location | Westbound (Peak Hour) | | | | |
| Aztec Road (East) | AM Peak | 13 (9:15 AM – 10:15 AM) | 15 (8:00 AM – 9:00 AM) | | |
| Aziec Ruau (Easi) | PM Peak | 17 (5:30 PM – 6:30 PM) | 17 (1:15 PM – 2:15 PM) | | |
| Aztec Road (Middle) | AM Peak | 12 (8:00 AM – 9:00 AM) | 14 (7:30 AM – 8:30 AM) | | |
| Aziec Roau (iviluule) | PM Peak | 19 (1:30 PM – 2:30 PM) | 16 (5:30 PM – 6:30 PM) | | |
| Aztoc Doad (West) AM Peak | | 13 (10:45 AM – 11:45 AM) | 22 (7:15 AM – 8:15 AM) | | |
| Aztec Road (West) | PM Peak | 24 (3:15 PM – 4:15 PM) | 17 (5:30 PM – 6:30 PM) | | |

The Aztec Road study area peak hour traffic volumes range from 12 to 24 vehicles per hour.

3.C. SPEED STUDY RESULTS

The results of the speed study are displayed below in Table 3.C.1. through 3.C.3.

| Table 3.C.1. | | | | | | | | | |
|-------------------------------|---------------------|---------------------|---------------------|--|--|--|--|--|--|
| Aztec Road (East) Speed Study | | | | | | | | | |

| Table 3.C.3. | | | | | | | | | |
|-------------------------------|--------------------------------|---------------------|---------------------|--|--|--|--|--|--|
| Aztec Road (West) Speed Study | | | | | | | | | |
| Speed EB WB Total | | | | | | | | | |
| Average | 21.3 | 22.6 | 21.9 | | | | | | |
| 10 mph Pace | 20.1 – 30.0 (60.3%) | 20.1 – 30.0 (65.6%) | 20.1 – 30.0 (62.9%) | | | | | | |
| 50th Percentile | 22.9 | 23.8 | 23.5 | | | | | | |
| 67th Percentile | 67th Percentile 25.7 27.0 26.4 | | | | | | | | |
| 85th Percentile | 29.1 | 29.3 | 29.2 | | | | | | |

When considering whether to establish a new posted speed limit or not, surveying the existing traffic speeds is crucial to determining a reasonable posted speed limit.

Before a posted speed limit can be adjusted, an analysis must be conducted to ascertain whether or not the speed limit can be adjusted without resulting in further increases of motorists' travel speeds. Motorists usually drive at speeds which they perceive as safe, based on the observable roadway conditions. A flat and straight roadway may result in a different travel speed than the posted speed limit due to the driver's observation of the roadway condition.

In relation to Aztec Road, the posted speed limit is 25 mph; roadway conditions are consistent; on the eastern end of Aztec Road, the roadway curves southward and turns into Charleston Street; controlled access; satisfactory pavement conditions; two travel lanes; and on-street parking. Table 3.C.4. displays that 37 percent of the total ADT of the three (3) count locations recorded speeds greater than the posted speed limit of 25 mph.

| | | Ţ | able 3.C.4 | | | | |
|---------------------|--------|----------|------------|---------|------|-------|----------|
| | | Aztec Ro | oad ADT ≥ | 25 mph | | | |
| Speed (mph) | 0 - 19 | .9 MPH | 20 - 24 | 4.9 MPH | ≥ 2 | 5 MPH | Avg. ADT |
| Aztec Road (East) | 72.5 | 31% | 77.5 | 33% | 85.5 | 36% | 236 |
| Aztec Road (Middle) | 84 | 33% | 83.5 | 33% | 83.5 | 33% | 251 |
| Aztec Road (West) | 81.5 | 26% | 106.5 | 34% | 126 | 40% | 314 |
| Average | 79.3 | 30% | 89.2 | 33% | 98.3 | 37% | 267 |

3.D. CRASH DATA

Crash data was requested from the Albuquerque Police Department for the most recent three (3) years. The crash data requested showed there were no recorded crashes within the study area.

4. CONCLUSION

After evaluating the volume and speed data within the project area, it is concluded that 37 percent of the traffic is exceeding the posted speed limit of 25 mph and the 85th percentile speed of traffic is exceeding the posted speed limit by 5 mph or more at the count locations. In order to meet criteria for traffic calming measures as outlined in the City of Albuquerque's Neighborhood Traffic Management Program, at least two (2) of the following threshold criteria must be met:

| Table 4.1. | |
|---|-------------|
| COA NTMP (Neighborhood Traffic Management Program) Traffic Calming Measu | ires |
| Description | Warranted? |
| Reported crashes in the past 3 years that could be corrected with traffic calming | No |
| Peak-hour traffic volume greater than 400 vehicles in one direction | No |
| 25% of peak-hour traffic is non-local cut-through traffic | Not Studied |
| 85th percentile speeds exceeds the posted speed limit by 5 mph or more | No |

Based upon the data collected, Aztec Road DOES NOT meet any of the criteria outlined to warrant traffic calming.

Appendix B

CASE 10 6450

NEIGHBORHOOD TRAFFIC MANAGEMENT PROGRAM NTMP

This document includes the petition that must be completed by at least two-thirds of the affected households for the street segment. The map above is what the COA has determined to be the affected area. This must be filled out and sent back to Traffic Engineering within 2-3 weeks to be considered for traffic calming.
