INTRODUCTION

The City of Albuquerque – Department of Municipal Development (Traffic Engineering Design Division) has requested that Souder, Miller & Associates conduct a speed study along Las Lomas Road in northeast Albuquerque.

1.A. PROJECT PURPOSE

A speed study on Las Lomas Road from University Boulevard to Encino Place was conducted to determine the following:

- Evaluate the 85th percentile speed along Las Lomas Road at five (5) locations;
- Calculate average and daily peak hour traffic volumes along Las Lomas Road.

As part of this study, an evaluation and cataloging of existing roadway conditions, collection of historical ADT, and crash data will be completed.

1.B. PROJECT DESCRIPTION

The study area will be a 0.36 mile (1900.80 LF) section of Las Lomas Road from University Boulevard to Encino Place. Figure 1.B.1. below displays the study location and Figure 1.B.2. on page 2 displays the study limits.

1.C. BACKGROUND OF SPEED LIMITS

Speed limits are established on roadways of virtually all classifications, from interstate freeways to low volume local streets. The primary purpose of speed limits is to give motorists clear instruction as to what is a reasonable speed for them to drive at while traveling on a given roadway.

Among regulatory signage, speed limit signs arguably contain the most critical information that motorists need to be informed of while driving (next to stop signs, which are considered the highest impact regulatory sign). Drivers unfamiliar with a roadway often do not realize what characteristics the roadway has, and properly established speed limit signs give them the information they need to drive the roadway safely.

The NMDOT has guidelines for analyzing and establishing posted speed limits; the following text is based on one such example:

Realistic posted speed limits are of public importance for many reasons:

- They invite public compliance by conforming to the behavior or the driving majority
- They give clear reminders of safe and reasonable speeds to non-conforming violators
- They offer the most effective tool for law enforcement of safe driving
- They will minimize public antagonism toward law enforcement that results from unreasonable regulations

Improperly, or artificially low, posted speed limits can cause problems for state and local agencies for several reasons:

- They do not encourage voluntary compliance, since they do not reflect the behavior of the majority
- They make the behavior of the majority unlawful
- They maximize public antagonism toward law enforcement, since the perception is that the police are enforcing a “speed trap”
- They create a bad image for a community in the eyes of tourists / visitors

1.D. SETTING SPEED LIMITS

In accordance with Section 66-7-303 of the New Mexico Criminal and Traffic Law Manual, the speed limit on state highways shall be set by the Cabinet Secretary of the Department of Transportation, based on an engineering survey and traffic investigation that includes the following parameters.

- Spot speed studies (typically consisting of 100 vehicles)
- Roadway geometry/number of lanes
- Roadside environment and characteristics
- Building setbacks (if within a commercial business district)
- Driveway and intersection spacing/density
- Historical crash data for the roadway study area

Many speed limits are established using the theory of 85th percentile. Out of the (typically) 100 vehicles surveyed, beginning with the fastest vehicle speed recorded the 15th vehicle from that speed is determined to show where the 85th percentile speed is. This is assuming that most drivers (85%) drive within reasonable limits. The posted speed limit can be established and is usually the 5 – mph increment just below the 85th percentile speed. For example, if the 85th percentile speed

has been determined by an engineering survey to be 57 mph, the posted speed would be 55 mph. This method of posting speed limits allows for a reasonable posted speed limit that can be enforced by local agencies, without creating a speed trap.

For surveys with a different amount than 100 vehicles, the 85th percentile speed is determined by the following formula: $100/15 = \# \text{ of vehicles surveyed}/X$ (where $x =$ the vehicle at the 85th percentile). For example, a 50 vehicle survey would result in:

$$\frac{100}{15} = \frac{50}{x}$$

Where $x = 7.5$, or the 8th vehicle in the survey

Other methods are frequently used to further analyze the posting of speed limits – these are the mode, median, and geometric mean:

- Mode is the most frequently clocked vehicle speed in a given survey. For example, in a 100 vehicle survey where 12 vehicles were clocked traveling 55 mph and no other speed was observed as frequently, the mode is 55 mph.
- Median is the numerical midpoint of a given survey. For example, in a survey of 100 vehicles, the speeds of the 50th and 51st vehicles are added and divided by 2 to obtain the median speed. If the 50th vehicle of such a survey was traveling at 56 mph and the 51st vehicle was also traveling at 56 mph, the resulting median would be $(56 + 56) \div 2 = 112 \div 2 = 56$ mph
- Geometric mean is described as follows: “an average of a set of numbers that is calculated by multiplying all the numbers (“n”), and taking the nth root of the total.”

Formula for Geometric Mean:

$$\text{Geometric Mean} = ((X_1)(X_2) \dots \dots (X_n))^{1/N}$$

$X =$ Individual score (speed)
 $N =$ Sample size (number of scores)

Geometric Mean Example:

Sample speeds = 51, 52, 55, 58, and 60 mph

Step 1:

$N = 5$, the total number of values, $\frac{1}{N} = 0.2$

Step 2:

Determine geometric mean using the formula.

$$\text{Geometric Mean} = ((51)(52)(55)(58)(60))^{0.2} = 55.09 \text{ mph}$$

In most cases, the geometric mean of a speed study will be of similar value of the median, often within 1 to 2 mph of either side of the median. In the above example, the median speed would be the third vehicle surveyed (55 mph), and the geometric mean is 55.09 mph.

2. EXISTING CONDITIONS

2.A. COUNT LOCATIONS

The study area included five (5) volume and speed count locations which were at the following locations:

- Segment 1 – Las Lomas Road from University Boulevard to Sycamore Street;
- Segment 2 – Las Lomas Road from Sycamore Street to Spruce Street;
- Segment 3 – Las Lomas Road from Spruce Street to Ridge Place;
- Segment 4 – Las Lomas Road from Ridge Place to Cedar Street;
- Segment 5 – Las Lomas Road from Cedar street to Encino Place.

Figure 2.1. on page 6 displays the segment locations.

2.B. EXISTING CONDITIONS

Figure 2.2. on page 6 displays the existing typical section of Las Lomas Road from Cedar Street to University Boulevard and Figure 2.3. on the same page displays the existing typical section of Las Lomas Road from Encino Place to Cedar Street. Within the study limits, there are 4 intersections and approximately 35 driveways that provide access to residential homes. Also to be noted, the speed limit within the study limits is 25 mph and Segment 5 between Cedar Street and Encino Place is a one-way westbound street.

3. DATA

3.A. ADT

The ADT for the five (5) count locations are listed below in Table 3.A.1.

Table 3.A.1.			
Las Lomas Road ADT			
Count Location	Westbound	Eastbound	ADT
Segment 1	841	430	1271
Segment 2	636	288	924
Segment 3	552	143	695
Segment 4	503	126	629
Segment 5	393	-	393
Average	585.0	246.8	782.4

The Las Lomas Road study area directional ADT ranges from 126 to 841 vehicles per day.

3.B. PEAK HOUR TRAFFIC VOLUMES

The peak hour traffic volumes for the five (5) count locations are shown below from Table 3.B.1.

Table 3.B.1.

	PM Peak	100 (4:15 PM - 5:15 PM)	42 (2:30 PM - 3:30 PM)
Segment 2	AM Peak	54 (8:45 AM - 9:45 AM)	34 (9:15 AM - 10:15 AM)
	PM Peak	78 (4:15 PM - 5:15 PM)	33 (3:30 PM - 4:30 PM)
Segment 3	AM Peak	52 (8:45 AM - 9:45 AM)	21 (9:00 AM - 10:00 AM)
	PM Peak	59 (4:30 PM - 5:30 PM)	16 (5:30 PM - 6:30 PM)
Segment 4	AM Peak	50 (8:45 AM - 9:45 AM)	17 (9:00 AM - 10:00 AM)
	PM Peak	54 (5:00 PM - 6:00 PM)	14 (4:15 AM - 5:15 AM)
Segment 5	AM Peak	44 (7:30 AM - 8:30 AM)	-
	PM Peak	44 (12:45 PM - 1:45 PM)	-

The Las Lomas Road study area peak hour traffic volumes range from 14 to 100 vehicles per hour.

When considering whether to establish a new posted speed limit or not, surveying the existing traffic speeds is crucial to determining a reasonable posted speed limit.

Before a posted speed limit can be adjusted, an analysis must be conducted to ascertain whether or not the speed limit can be adjusted without resulting in further increases of motorists' travel speeds. Motorists usually drive at speeds which they perceive as safe, based on the observable roadway conditions. A flat and straight roadway may result in a different travel speed than the posted speed limit due to the driver's observation of the roadway condition.

In relation to Las Lomas Road, the posted speed limit is 25 mph, roadway conditions are consistent; controlled access, satisfactory pavement conditions, two travel lanes, and on-street parking. Table 3.C.6 displays that 13 percent of the total ADT of the five count locations recorded speeds greater than the posted speed limit of 25 mph.

4. U.S. LIMITS SPEED LIMITS PROGRAM

U.S. Limits is an FHWA sponsored program used to analyze speed limits. This program calculates a recommended speed limit based on the criteria given, which is listed on the website as follows:

- Density of surrounding development (e.g. high density, low density, or rural);
- Frequency of roadside access (e.g. number of residential driveways, commercial, industrial, shopping, and special activity properties, and the number and type of intersection roads);
- Road function (e.g. traffic movement vs. access to abutting properties);
- Road characteristics (e.g. paved width, divided or undivided, lane width, number and lanes, and sight restrictions);
- Road conditions and important high speed road characteristics (e.g. interchange spacing, AADT, and shoulders);
- Existing vehicle operating speeds;
- Adjoining speed limits and;
- Any special conditions that may exist on the road section (e.g. adverse alignment, pedestrian and roadside activities, high crash rates, etc.).

This analysis was used for Las Lomas Road from University Boulevard to Cedar Street and based on the data entered into <http://www.uslimits.com> for the above-listed categories. The output sheet is shown in Appendix A – U.S. Limits Output. The U.S. Limits Output recommended a speed limit of 20 mph that should only be reduced as a last measure after other treatments have been tried or ruled out.

5. CONCLUSION

After evaluating the volume and speed data within the project area, it is concluded that only 13% of the traffic is exceeding 25 mph and the 85th percentile speed of traffic is not exceeding the posted speed limit by 5 mph or more at the count locations. In order to meet criteria for traffic calming measures as outlined in the City of Albuquerque’s Neighborhood Traffic Management Program, at least two (2) of the following threshold criteria must be met:

Figure 5.1. COA NMTP Traffic Calming Measures	
Description	Warranted?
Reported crashes in the past 3 years that could be corrected with traffic calming	Yes
Peak-hour traffic volume greater than 400 vehicles in one direction	No
25% of peak-hour traffic is non-local cut-through traffic	Not Studied
85th percentile speeds exceeds the posted speed limit by 5 mph or more	No

Based on the data collected, Las Lomas Road meets only 1 of the 4 warrants and therefore DOES NOT meet the minimum COA NTMP traffic calming measures threshold.

Project Description: Los Lomas Road Speed Study from University Boulevard to Cedar Street.

Recommended Speed Limit:

Note: The section crash rate of 3348 per 100 MVM is above the critical rate (1195). The injury crash rate for the section of 1674 per 100 MVM is above the critical rate (621). A comprehensive crash study should be undertaken to identify engineering and traffic control deficiencies and appropriate corrective actions. The speed limit should only be reduced as a last measure after all other treatments have either been tried or ruled out.
