Oxygenated Fuels Program

Annual Report to the Albuquerque Bernalillo County  
Air Quality Control Board

July 8, 2015

# The Oxygenated Fuel Program

- Air pollution control strategy to reduce tailpipe emissions
  - Accomplished by blending ethanol with gasoline
  - Required minimum 2.7% oxygen content by weight during the “Winter pollution season”
  - November 1 to end of February
  - 20% retail stations are sampled and tested
- New Mexico Department of Agriculture
  - 144 retail stations out of 240 (60%)
  - Average oxygen content by weight was 8.9%
