20.11.20.2 SCOPE:
A. [This part] 20.11.20 NMAC is applicable to all sources of fugitive dust in Bernalillo county, [including paved and unpaved roadways, rights-of-ways and lots] unless otherwise exempt. 
B. Exempt: [This part] 20.11.20 NMAC does not apply to sources within Bernalillo county that are:
1. located on Indian lands over which the Albuquerque- Bernalillo county air quality control board lacks jurisdiction; [and]
2. hard rock mining pits and operations contained within the mining pit and permitted pursuant to the State of New Mexico Mining Act. For the purposes of [this part] 20.11.20 NMAC, sand and gravel mining operations are not exempt; [and]
3. emergency maintenance operations that are intended to address an imminent threat to property or persons. However, reasonably available control measures must be employed once the emergency has been addressed, and a report of all activities shall be filed with the department no later than 10 days after the incident has been concluded and the department shall determine if additional action, including a permit application submittal, is required before further additional non-emergency activities occur at the site; and
4. [ongoing] stationary source operations [that require permits pursuant] subject to 20.11.41 NMAC Authority to Construct, or 20.11.42 NMAC, Operating Permits, [and] that produce fugitive dust as defined in [this part] 20.11.20 NMAC are exempt from obtaining a fugitive dust control permit and paying fees due under this part, but only if the source of fugitive dust is addressed and controlled through permit conditions required by a 20.11.41 NMAC or 20.11.42 NMAC permit. [If] However construction at a stationary source site, whether it involves new construction or a site modification, is subject to [this part] 20.11.20 NMAC.
C. [Exempt for three years] Conditionally Exempt: The following [eight] sources of fugitive dust emissions in Bernalillo county shall be conditionally exempt from the requirements of [this part] 20.11.20 NMAC for three years from the effective date of this part. Before the three-year exemption expires, the board shall hold a hearing that includes a review of an emissions inventory of the eight sources and other significant sources of fugitive dust in Bernalillo county and decide if the exemptions shall be continued. If one or more of the three-year exemptions expire, the board shall also review the fugitive dust control fees to determine if they are adequate to support the fugitive dust control program, unless the department determines that the fugitive dust emitted from a conditionally exempt source’s active operations or inactive disturbed surface area may adversely and significantly affect human health within Bernalillo county:
(1) areas zoned for agriculture and used for growing a crop; [and]
(2) bicycle trails, hiking paths and pedestrian paths, horse trails or similar paths used exclusively for purposes other than travel by motor vehicles; [and]
(3) unpaved roadways serving six residential dwellings or fewer; and
(4) unpaved roadways less than one quarter mile in length that are not short cuts; and
(5) [two] unpaved roadways on [private] privately-owned easements serving residential dwellings [uses that are in existence at the time this part becomes effective; and]
(6) unpaved roadways on United States department of agriculture forest service lands or United States department of interior park service lands, if the roadways are more than one-quarter of a mile from an occupied residence; [and]
(7) lots [occupied by dwellings used solely for residential purposes or solely for non-commercial livestock operations, smaller than three quarters of an acre, not including lots] smaller than three-quarters of an acre used for [other] any purposes; and
(8) unpaved roadways within properties used for ranching [and] or [unpaved roadways within properties owned or controlled by the United States department of energy or department of defense]. However, [this exemption only applies] if the public does not have motor vehicle access to the roadways.
20.11.20.3 STATUTORY AUTHORITY: [This part] 20.11.20 NMAC is adopted pursuant to the authority provided in the New Mexico Air Quality Control Act, NMSA 1978 Sections 74-2-4, 74-2-5; the Joint Air Quality Authority Act, NMSA 1978 76-12-22; and in consultation with the New Mexico Department of Health.
Control Board Ordinance; Bernalillo county Ordinance No. 94-5, Sections 4 and 5; and the Joint Air Quality Control
Board Ordinance, Revised Ordinances of Albuquerque 1994 Sections [9-5-1.3 and] 9-5-1-4 and 9-5-1-5.
[20.11.20.3 NMAC - Rp, 20 NMAC 11.20.1.3, 3/1/04, 3/17/08]

20.11.20.4 DURATION: Permanent.
[20.11.20.4 NMAC - Rp, 20 NMAC 11.20.1.4, 3/1/04]

20.11.20.5 EFFECTIVE DATE: March 1, 2004, unless a later date is cited at the end of a section.
[20.11.20.5 NMAC - Rp, 20 NMAC 11.20.1.5, 3/1/04, 3/17/08]

20.11.20.6 OBJECTIVE: To ensure that [all persons conducting] every person shall [active operations that
result in disturbed surface areas or involve bulk material handling uses] use reasonably available control measures or
other effective measures on an ongoing basis to prevent or abate [injury to] fugitive dust, if the fugitive dust may
with reasonable probability injure human health [and] or animal [and] or plant life [and to prevent or abate
unreasonable interference] or as may unreasonably interfere with the public welfare, visibility [and] or the
reasonable use of property, as required by 20.11.20 NMAC.
[20.11.20.6 NMAC - Rp, 20 NMAC 11.20.1.6, 3/1/04, 3/17/08]

20.11.20.7 DEFINITIONS: In addition to the definitions in [this section] 20.11.20.7 NMAC, the definitions
in 20.11.1 NMAC apply unless there is a conflict between definitions, in which case the definition in [this part]
20.11.20.7 NMAC shall govern.

A. “Active operations” means any anthropogenic activity that is capable of generating, or generates
fugitive dust, including but not limited to: bulk material storage, handling or processing; earth moving; soil or
surface disturbance (e.g. discing, trenching, blading, scraping, clearing, grubbing, topsoil removal); construction,
renovation, or demolition activities; movement of motorized vehicles on any paved or unpaved roadway or surface,
right-of-way, lot or parking area; or the tracking out or transport of bulk material onto any paved or unpaved
roadway.

B. “Anthropogenic” means human-caused changes in the natural or built condition of the
environment.

C. “Bulk material” means sand, gravel, soil, aggregate or any other inorganic or organic solid
material capable of creating fugitive dust.

D. “Business Day” means Monday through Friday, except city of Albuquerque holidays.

E. “Construction activity” means any activity preparatory to or related to building, altering,
rehabilitating, demolishing or improving property that results in a disturbed surface area, including but not limited to
grading, excavation, loading, crushing, pavement milling, cutting, clearing, grubbing, topsoil removal, blading,
shaping, dry sweeping, blasting and ground breaking.

F. “Crop” means an agricultural plant harvested for consumption, utilization or sale.

G. “Disturbed surface area” or “surface disturbance” means the natural or manmade area of the
earth’s surface that, as a result of anthropogenic activity, [results in a release of fugitive dust or serves as] may
become a source of transported material, track-out, or visible fugitive dust.

H. “Division” means the city of Albuquerque air quality division or its successor agency.

I. “Dust suppressant” means water, hygroscopic materials, or non-toxic chemical stabilizers used
to reduce or control fugitive dust emissions during suspended operations and as a long term reasonably available
control measure.

J. “Earth moving activity” means grading, cutting, filling, soil disturbance (e.g. discing, trenching,
blading, scraping, clearing, topsoil removal, grubbing), soil mulching, loading or unloading of dirt or other bulk
materials, including adding to or removing from open storage piles or stockpiles of bulk materials.

K. “Fugitive dust” or “dust” means organic or inorganic particulate matter [in quantities and of a
duration that may with reasonable likelihood injure human or animal health or plant life, reduce safe visibility, cause
property damage, or degrade visibility]. Water vapor, steam, or particulate matter emissions emanating from a duct
or stack of process equipment are not fugitive dust.

L. “Fugitive dust control construction permit” or “permit” means a fugitive dust control permit
approved by the department and issued pursuant to [this part] 20.11.20 NMAC that contains an approved fugitive
dust control plan [that allows the beginning of] and authorizes active operations to begin when the permit is signed by
[an authorized department representative] a division manager, supervisor, scientist, field operations officer or
health specialist.

M. “Fugitive dust control plan” or “plan” means the part or portion of the fugitive dust control
construction permit or programmatic permit application that details [any] the reasonably available control measures

20.11.20 NMAC Public Review Draft 12/29/07
and other effective measures the permit applicant commits to use to reduce the quantity of visible fugitive dust, and transported material, or track-out leaving the property or area under the control of the permittee, in order to prevent a violation of the national ambient air quality standards (NAAQS) and to meet the objective of this part, including, and shall include contingency fugitive dust control measures, that shall be a requirement of every fugitive dust control permit.

N. “Greenwaste” means organic matter including, grass clippings, leaves, weeds, small shrub or tree limb cuttings, brush, stumps, and soils.

M. “High wind event” means a time period of five consecutive minutes with an average wind speed of 30 miles per hour (high wind event threshold level) or higher condition announced by the department consisting of wind speeds of approximately 30 miles per hour or greater that, when accompanied by dry soil conditions, is likely to result in widespread reduced visibility due to blowing fugitive dust and that may result in elevated monitored particulate levels that may cause or contribute to an exceedance or violation of the national ambient air quality standards.

O. “High wind event threshold level” or “threshold level” means a five minute averaged wind speed level of 30 miles per hour or more that is used to determine a high wind event.

P. “Inactive disturbed surface area” means any disturbed surface area on which active operations have been suspended.

Q. “Large area disturbance” means a project or development, totaling more than 25 acres upon which active operations have been conducted, which includes areas used for storage of bulk material, building or construction materials, machinery or vehicles for which active operations have been conducted and includes areas used for storage of bulk material, building or construction materials, machinery or vehicles.

R. “Open storage pile” means the accumulation of any bulk material that is not fully enclosed, covered or chemically stabilized.

S. “Owner or operator” means any person who owns, leases, operates, controls, or supervises a source that directly or indirectly produces or is capable of producing fugitive dust.

T. “Parking lot” or “parking area” means a location where motor vehicles routinely park whether or not the area is zoned for parking or not.

U. “Paved” or “paving” or “paved roadway” means asphalt, recycled asphalt, concrete or asphaltic concrete, routinely-maintained asphalt pavements, or combinations thereof, that covers a surface traveled or used by motor vehicles.

V. “Permittee” means any person, owner or operator, and all legal heirs, successors, and assigns who has applied for and obtained an approved fugitive dust control construction or programmatic permit issued by the department pursuant to 20.11.20 NMAC.

W. “Person” means any individual, firm, partnership, corporation, association, organization, company, joint stock association, business trust, owner, or body politic, including, a municipality, local, state and or federal government agency or political subdivision, and shall include any employee, officer, operator, contractor, supplier, installer, user, leaseholder, trustee, receiver, assignee or other person acting in a similar representative capacity with the authority to control transported material or emissions of particulate matter generated at a disturbed surface area or generated by activities associated with a disturbed surface area or inactive disturbed surface area.

X. “Privately-owned” means real property that is not wholly or partially owned, leased or otherwise controlled by a federal, state or local government or governmental agency or political subdivision.

Y. “Programmatic permit” means a fugitive dust control permit valid for up to five years issued to a permittee that performs routine maintenance or routine ongoing active operations on real property, but does not include full depth reconstruction of a roadway or substantial removal and replacement of a manmade facility. A programmatic permit shall include an approved fugitive dust control plan and shall be effective when signed by a division manager, supervisor, scientist, field operations officer or health specialist.

Z. “Property line” means the exterior boundary of real property, as indicated by plats, plot maps or other indication of ownership limits.

AA. “Publicly-maintained” means under the jurisdiction of, or maintained by any federal, state, or local government or governmental agency or political subdivision.

BB. “Publicly-owned” means real property that is wholly or partially owned, leased or otherwise controlled by a federal, state or local government or governmental agency or political subdivision. Publicly-owned real property includes easements and rights-of-ways, streets, roadways, sidewalks, alleys and other public ways, parks, irrigation and drainage facilities, and any other publicly controlled real property that can be the source of fugitive dust.

CC. “Reasonably available control measure” or “control measures” means any device, system, process modification, apparatus, technique, work practice or control measure, or combination thereof, that
mitigates fugitive dust and [may be included] includes the measures in [this part] 20.11.20.23 NMAC [or] and any
other regulatory control program that [affords] results in equivalent protection of a disturbed surface or inactive
disturbed surface area, whether or not the purpose of the control measure is to mitigate dust or to meet [some other]
another requirement of [this part] 20.11.20 NMAC or any other statute or regulation. [Any effective control
measures, including those in 20.11.20.23 NMAC may be used].

[CC]“Responsible person” [or “responsible official”] means the person designated in a
fugitive dust control permit application or permit amendment who [is] agrees to be and shall be responsible for
complying with 20.11.20 NMAC, and with the permit, and plan [and this part] to the extent specified in the permit.

[DD]“Short cut” means a non-dedicated roadway or route used by motor vehicle drivers to
save time by avoiding use of a dedicated and authorized roadway.

[EE]“Silt” means [any] bulk material that passes through a 200-mesh screen using the
[ASTM C-126] ASTM-D 2487-93, “Classification of Soils for Engineering Purposes (United Soil Classification
System)” method, or most current ASTM (American society for testing and materials) method. Material that will
pass through a 200-mesh screen is 74 microns or less in size.

[FF]“Source” or “source of fugitive emissions” means the origin of fugitive dust emissions.

[GG]“Stabilized” or “stabilization” means [the] ongoing practices that are sufficient to
prevent [a] elevated monitored particulate levels that may cause or contribute to an exceedance or violation of the
national ambient air quality standards by meeting the objective established in [Section] 20.11.20.6 NMAC and the
requirements of the general provisions established in 20.11.20.12 NMAC [of this part].

II. “Stockpile” means the depositing of bulk material by mechanical means for the purpose of
creating a pile formation on top of an existing natural or man-made surface.

[HH]“Stop work order” means an order issued by the department pursuant to the provisions of [this
part requiring] 20.11.20 NMAC that requires a person to cease active operations.

[IJ]“Track-out” or “tracking” means bulk material deposited by a motor vehicle or vehicles upon
an unpaved or paved publicly or privately owned roadway [and that] if the bulk material can become airborne due to
mechanical or wind action.

[II]“Transfer of Permit” means an agreement approved in writing by the department that
meets the conditions outlined in subparagraphs (1) through (6) of paragraph D of 20.11.20.14 NMAC.

[JJ]“Transported material” means particulate matter transported by wind, water or other
action that, once deposited, can become airborne due to mechanical or wind action.

[KK]“Unpaved roadway” means [any] an unpaved route traveled by a motorized vehicle.

[LL]“Visible fugitive dust” means [anthropogenic] airborne particulate matter [emissions]
from a source, resulting in particulate matter emissions that can be detected by the human eye or a detection
method approved by the department. Visible fugitive dust can be an indicator of PM10.

[MM]“Visible fugitive dust detection method” means the method described in [Section
20.11.20.25 of this part] 20.11.20.26 NMAC, which is one method used to determine compliance with [this part]
20.11.20 NMAC.

[20.11.20.7 NMAC - Rp, 20 NMAC 11.20.1.7, 3/1/04, 3/17/08]

20.11.20.8 VARIANCES: Any person may request a variance from [this part] 20.11.20 NMAC in
accordance with [74-2-8 NMSA 1978, Variances] the procedures established in 20.11.7 NMAC. [The variance
procedures of 20.11.7 NMAC shall not apply to this part].

[20.11.20.8 NMAC - Rp, 20 NMAC 11.20.1.8, 3/1/04, 3/17/08]

20.11.20.9 SAVINGS CLAUSE: Any amendment to Fugitive Dust Control, 20.11.20 NMAC, which is filed
with the state records center and archives shall not affect actions pending for violation of a city or county ordinance,
or prior versions of 20 NMAC 11.20 and 20.11.20 NMAC, Airborne Particulate Matter, 20.11.20 NMAC Fugitive
Dust Control, or a permit. Prosecution for a violation of a prior statute, ordinance, part or permit shall be governed
and prosecuted under the statute, ordinance, part or permit wording in effect at the time the violation was committed.

[20.11.20.9 NMAC - Rp, 20 NMAC 11.20.1.9, 3/1/04, 3/17/08]

20.11.20.10 SEVERABILITY: If any section, subsection, sentence, phrase, clause or wording of [this part]
20.11.20 NMAC or the federal standards incorporated herein is for any reason held to be unconstitutional or
otherwise invalid by any court or the United States environmental protection agency, the decision shall not affect the
validity of remaining portions of [this part] 20.11.20 NMAC.

[20.11.20.10 NMAC - Rp, 20 NMAC 11.20.1.10, 3/1/04, 3/17/08]
20.11.20.11 DOCUMENTS: Documents incorporated and cited in [this part] 20.11.20 NMAC may be viewed at the Albuquerque environmental health department, 400 Marquette NW, Albuquerque, NM.
[20.10.20.11 NMAC - Rp, 20 NMAC 11.20.1.11, 3/1/04, 3/17/08]

20.11.20.12 GENERAL PROVISIONS:

A. Each person shall use reasonably available control measures or any other effective control measure during active operations or on inactive disturbed surface areas, as necessary to prevent the release of fugitive dust [a violation of the national ambient air quality standards and meet the objective established in 20.11.20.6 NMAC], whether or not the person has been issued] is required by 20.11.20 NMAC to obtain a fugitive dust control permit. [No person] It shall be a violation of 20.11.20 NMAC to allow fugitive dust, track out, or transported material from any active operation, open storage pile, stockpile, paved or unpaved roadway [or] disturbed surface area, or inactive disturbed surface area to cross or be carried beyond the property line, right-of-way, easement or any other area under control of the person generating or allowing the fugitive dust if the fugitive dust [will] may: [1] adversely affect the health, public welfare or safety of the residents of Bernalillo county; or 2) impair visibility or the reasonable use of property; or 3) be visible longer than a total of 15 minutes in any one hour observation period using the visible fugitive dust detection method in 20.11.20.26 NMAC or an equivalent method approved in writing by the department. To mitigate fugitive dust, all inactive disturbed surface areas must be stabilized and maintained in stable condition by the owner, operator, or person responsible for maintenance of the disturbed surface. Failure to comply with this subsection shall be a violation of this part.

(1) with reasonable probability injure human health or animal or plant life;
(2) unreasonably interfere with the public welfare, visibility or the reasonable use of property; or
(3) be visible for a total of 15 minutes or more during any consecutive one hour observation period

B. Failure to comply with 20.11.20.12 NMAC, a fugitive dust control permit, plan, term or condition shall be a violation of [this part] 20.11.20 NMAC.

C. The department may be asked to document and provide any evidence of the alleged property damage caused by fugitive dust and the department may make such documentation available to all parties involved in a property dispute. Prior to issuing a permit authorizing commencement of active operations, the department shall document the conditions of the properties that are closest to the property subject to the permit and any other properties the department believes are appropriate. The documentation may be in the form of photographs in electronic or hard copy formats or video recordings. The documentation will be maintained by the department for one year after completion of the permitted project. A condition of any permit issued shall be a requirement to remedy damage to real properties caused by a violation of the permit.

Prior to issuing a fugitive dust control construction permit authorizing commencement of active operations, the department shall:

(1) document, in the form of photographs in electronic or hard copy formats or video recordings, the conditions of the properties that are closest to the property subject to the permit and any other properties the department believes are appropriate;
(2) maintain the documentation for one year after completion of the permitted project;
(3) include in the permit a requirement that the permittee remedy damage to real properties caused by a violation of the permit; and
(4) make the documentation available as evidence, upon request, to all parties involved in a property damage dispute allegedly caused by fugitive dust.

D. A [person] permittee whose violation of [this part] 20.11.20 NMAC results in fugitive dust being deposited upon [land] real property beyond the limits of the permitted area shall take all actions necessary to remedy damage caused by a violation proven with credible evidence. Such remedies may include, but not be limited to, compensation, removal of the fugitive dust and/or repair of any damage after obtaining permission from property owners or operators before doing any remedial work on the damaged property. It shall be a separate violation of [this part] 20.11.20 NMAC to fail to remove the fugitive dust and repair the damage as specified in [the] a written schedule or any extension agreed to by the [person] permittee and the owner of the damaged property [owner]. If the parties cannot agree to a schedule, the department may establish deadlines and failure to comply with the deadlines shall be a separate violation of [this part] 20.11.20 NMAC. No violation will occur if the failure to perform the corrective action is for reasons beyond the control of the person performing the work including without limitation acts of God or government preemption in connection with a national emergency or if the owner of the allegedly damaged property [owner] refuses to grant reasonable permission and access to conduct the remediation activities.

20.11.20 NMAC Public Review Draft 12/29/07
E. [Reserved.] Stockpiles shall be no higher than 15 feet above the existing natural or man-made
grade that abuts the stockpile, unless otherwise approved in advance and in writing by the department.

F. Each person must shall comply with all applicable provisions of the Clean Air Act, the New Mexico Air Quality Control Act, joint air quality control board ordinances, regulations of the board, and permits issued by the department.

[20.11.20.12 NMAC - Rp, 20 NMAC 11.20.II.1, 3/1/04, 3/17/08]

20.11.20.13 [EXISTING SURFACE DISTURBANCE AREAS; FUGITIVE DUST CONTROL PLANS/PERMIT-REQUIRED; FUGITIVE DUST CONTROL PROGRAMMATIC PERMITS;

A. Surface disturbance/demolition permits valid at the time this replacement Part 20 became effective shall remain in effect until the earlier of the expiration date of the surface disturbance/demolition permit or sign-off of the surface disturbance/demolition permit by the department as “project complete.” Any renewals, extensions or modifications of existing permits that involve expansion of the disturbed area or modification of the approved plan covered by the existing permit shall comply with the requirements of Part 20, Fugitive Dust Control, including but not limited to payment of the fees required by this part.

B. Any person responsible for sloped (i.e. slopes having a steepness of three-to-one or steeper) and bottom portions of interior and riverside drains and canals used for irrigation purposes, and arroyos and public flood control facilities subject to routine maintenance or repair, sedimentation and water erosion shall apply, for a variance, a programmatic permit as authorized by Subsection C of 20.11.20.13 NMAC below, or a large scale interim status permit set out in Subsection D of 20.11.20.13 NMAC below if the person does not elect to file an application and obtain a new disturbance area permit under 20.11.20.14 NMAC.

C. Programmatic permits covering ongoing routine maintenance of any facilities that exist on the effective date of this part at single or multiple locations may be approved by the department. Programmatic permits are issued to address work activities that result in similar earth moving or surface disturbance activities and utilize similar fugitive dust abatement strategies. Programmatic permits are valid for up to five years and permittee shall pay an annual fee for each year covered by the programmatic permit. Receipt by the department of the annual fees shall result in an automatic renewal of the programmatic permit. A new permit application shall be required every five years or earlier if the surface disturbance activities or fugitive dust abatement strategies are modified. Programmatic permits shall follow the processing requirements of Subsection C or D of 20.11.20.14 NMAC of this part below, as appropriate.

D. Large scale interim status permits shall automatically be granted to all persons who are responsible for, in control of, or have a right of entry pursuant to an easement, permit, license, or right of way for 100 miles or more of unpaved roadways or easements on the effective date of this part and who file a declaration of eligibility within six months of the effective date of this part. A person may withdraw the declaration at any time and terminate all responsibilities under Subsection D of 20.11.20.13 NMAC. If a declaration is withdrawn, the person withdrawing the declaration shall comply with all other applicable requirements of 20.11.20 NMAC. The person issued a large scale interim status permit shall not be subject to enforcement under this part if the person has filed a declaration of eligibility consistent with this section and, within 90 days of filing the declaration, has paid the applicable programmatic permit fee required by 20.11.2.15 NMAC. The declaration shall include an agreement to the following conditions:

(1) within one year of the effective date of this part, the person shall undertake an inventory of all unpaved roadways and easements and shall submit that report the department and the board;
(2) within two years of the effective date of this part, the person shall develop a compliance plan with the written approval of the department that sets out a strategy (hereafter “compliance plan”) to permanently stabilize the existing unpaved roadways and easements using any reasonably available control measures identified in this part or any other effective control measure that is required under any other statute or regulation, or any other effective control measure devised by the person responsible for these disturbed surfaces;
(3) the compliance plan shall set out a mandatory schedule for permanent stabilization of existing unpaved roads and easements, which shall be completed within no more than 10 years from the effective date of this part;
(4) annual progress reports regarding implementation of the compliance plan shall be submitted to the department and the board documenting the actions taken, due diligence to pursue actions, delays, and explanations of any missed deadlines;
(5) the compliance plan shall be updated annually, and extensions to the approved schedule may be approved by the department. Extensions shall only be granted for a two-year period and only upon a showing of diligent action to achieve compliance; each two year extension must be applied for separately and only the amount of time necessary to achieve compliance shall be approved by the department if less than a two year period
required to achieve a mandatory deadline; the department shall grant only three two-year extensions. The board may
only grant additional extensions upon a request and public hearing before the board;

(6) If the person fails to comply with this section or upon review of the annual reports and
compliance plan updates, the department determines that the person has failed to achieve a reasonable rate of
progress based upon diligent actions, the enforcement provisions of 20.11.20.27 NMAC shall be pursued until
reasonable corrective actions are developed to address the failure; if the department accepts the corrective actions a
new compliance plan shall be approved by department, and a copy of the new compliance plan and full report shall
be made to the board.

A. A fugitive dust control programmatic permit is required for single or multiple facility locations to
address real property totaling three-quarters of an acre or more that is subject to routine maintenance, routine surface
disturbance activities, or routine ongoing active operations. A programmatic permit application and fugitive dust
control plan shall be submitted on forms provided by the department. Programmatic permits are valid for up to five
years. The permittee shall pay the annual programmatic permit fee required by 20.11.2 NMAC, Fees, for each year
covered by the programmatic permit. Receipt of the annual fee by the department shall result in an automatic annual
renewal of the programmatic permit. A new programmatic permit application and fugitive dust control plan shall be
submitted every five years or sooner if the surface disturbance activities or fugitive dust abatement strategies are
modified. A filing and review fee is not required for a programmatic permit.

B. A person responsible for sloped (i.e. slopes having a steepness of three-to-one or steeper) and
bottom portions of interior and riverside drains and canals used for irrigation purposes, and arroyos and public flood
control facilities subject to routine maintenance or repair, sedimentation and water erosion shall obtain either a
variance as provided by 20.11.7 NMAC or a programmatic permit as provided by Subsection A of 20.11.20.13
NMAC if the person does not elect to submit an application and obtain a fugitive dust control construction permit
pursuant to 20.11.20.14 NMAC.

No signs or photographic documentation shall be required for the permits or activities [covered in
Section] subject to 20.11.20.13 NMAC. Appropriate permit application documentation shall be determined by the
department.

[20.11.20.13 NMAC - Rp, 20 NMAC 11.20. II.2 - 9, 3/1/04, 3/17/08]

20.11.20.14 [NEW SURFACE DISTURBANCE AREAS; FUGITIVE DUST CONTROL PLANS;
PERMITS REQUIRED:] FUGITIVE DUST CONTROL CONSTRUCTION PERMITS:

A. Any person who does not elect to obtain a fugitive dust control permit pursuant to [Section
20.11.20.13 NMAC] or who does not qualify for a fugitive dust control programmatic permit [under
pursuant to [Section] 20.11.20.13 NMAC and who plans to conduct [new] active operations that will disturb three-quarters of an
denial, must shall comply with either Subsection [C or D of 20.11.20.14 NMAC] A or B of 20.11.20.18
NMAC and obtain a fugitive dust control construction permit. Any person may voluntarily apply and pay for a
permit pursuant to Subsections C and D of 20.11.20.14 NMAC and shall comply with the requirements of the permit
and this part. The application shall include a fugitive dust control plan that may utilize reasonably available control
measures to mitigate fugitive dust to meet the objectives of this part. No active operations shall commence until
[an authorized department representative] manager, supervisor, scientist, field operations officer or health
specialist signs the fugitive dust control construction permit (permit) and a copy of the signed permit is available at
the site of active operations. The permit shall consist of [the approved] a complete permit application [form,
the] a fugitive dust control plan, any appended documents, [and] any conditions attached to the permit by the
department, and a signature and effective date affixed by a department manager, supervisor, scientist, field
operations officer or health specialist.

B. The permittee shall [be responsible for complying] comply with the terms of [a] the permit unless
the department approves a transfer of the permit or issues a new permit for the active or inactive disturbed surface
area of operation to a new permittee. [In addition, the department may approve, in writing, an amendment to any
permit that adds or changes the designated responsible person who has agreed in writing to be responsible for
complying with the permit, to the extent specified in the permit. If the permittee fails to comply with the provisions
of this part, the owner or operator, if different from the responsible person or permittee, shall be responsible for
compliance with the permit.] If [a portion] three-quarters of an acre or more of the [active operations] real property
that is subject to the permit is [legally] transferred or sold [as a single occupancy residence lot,] the new owner of
that lot is responsible for [compliance] complying with [this part] either 20.11.20.13 NMAC or 20.11.20.14 NMAC
unless exempt. Upon receipt of an amended permit signed by a department manager, supervisor, scientist, field
operations officer or health specialist, [and] the permittee [is] who transferred or sold the real property no longer will
be responsible for control of fugitive dust originating from the [residential lot] real property that has been transferred
or sold. Permit amendment fees shall be paid as required by 20.11.20.14 NMAC.
C. Any person who plans to conduct active operations that will disturb at least three-quarters of an acre, or 32,670 square feet, but no greater than 25 acres of total land surface shall submit a fugitive dust control permit and fugitive dust control plan application to the department no fewer than 10 working days before beginning active operations. If different from the permittee, a person other than the permittee shall be responsible for complying with the permit and 20.11.20 NMAC, then the permittee shall designate the responsible person or persons in the permit application who shall be responsible for active operations and inactive disturbed surface areas to the extent specified in the application. Before a responsible person may be liable for violations of the permit or this part, 20.11.20 NMAC, the responsible person shall designate a responsible person for the permit application and the activities. Before a responsible party may be liable for violations of the permit or this part, the responsible person must agree in writing to accept responsibility for compliance with the permit and this part and shall be the first person contacted by the department to resolve a violation of the permit or this part.

D. Any person who plans to conduct active operations that will disturb more than 25 acres of total land surface shall submit a fugitive dust control permit application to the department regarding the proposed activity no fewer than 20 working days before beginning active operations. If different from the permittee, the permittee shall designate a responsible person for the permit application and the activities. Before a responsible party may be liable for violations of the permit or this part, the responsible person must agree in writing to accept responsibility for compliance with the permit and this part and shall be the first person contacted by the department to resolve a violation of the permit or this part.

E. A fugitive dust control permit application shall be submitted to the department by using permit application forms provided by the department along with any applicable fee. However, the fugitive dust control plan may be in any form including duplicates of programs to comply with any other statute or regulation so long as the plan provides reasonably available control measures whose purpose is to mitigate fugitive dust and meet the objectives of this part. If the plan does not specifically enumerate the control measures proposed to mitigate fugitive dust, the permit application shall be deemed incomplete. Permit applications shall be rejected if incomplete. If an incomplete application is rejected, a new application may be filed and all time limits within this part shall apply as if the initial application had not been filed.

F. When the complete permit application and fee are delivered to the department, the department shall have 10 working days to review the permit application if the area to be permitted is at least three-quarters of an acre but no greater than 25 acres, or the department shall have 20 working days to review the proposed permit if the area to be permitted is greater than 25 acres. If all requirements of this part are met, the department shall issue a permit to the permittee, which shall authorize commencement of active operations. If the department has not approved, denied, or notified the permittee of permit application deficiencies within 30 working days, the permit shall be automatically approved and operations may commence.

G. An approved fugitive dust control permit shall be valid for one year from the date of approval issuance by the department or until the project expiration date provided in the permit application, whichever is longer, but no more than five years from the date of issuance. If the project plan, expiration date, [the] total disturbed [area(s)], surface area, completion date or the proposed control measures change in any manner, [a] an amended or new permit [shall be] is required. At least 10 business days [prior to] before the expiration date, [all] a fugitive dust control [permits] permit must shall be renewed by the then-current permittee, or the permit shall expire as of the expiration date. Permit amendment or renewal fees [and programmatic permit fees shall be as described in 20.11.20 NMAC] shall be paid as required by Subsection H of 20.11.20.14 NMAC. [Fugitive dust control] Permits may be transferred to legal heirs, successors, and assigns, who shall become the new permittee. Permit transfers may [be made] qualify as an administrative amendment [provided that] if [a copy of a written agreement between the current and new permittee, containing a specific date of transfer of permit responsibility, coverage, and liability, has been submitted to the department, and either the department has determined that no change to the permit other than the administrative change is necessary, or changes to the permit deemed necessary by the department have been made, the new owners have submitted the application information required in Section 20.11.20.15 NMAC of this part, and no grounds exist for permit termination, as otherwise provided by this part.]

(1) the department has received, on a form provided by the department, a written transfer agreement signed by the current and new permittee, and, if different than the new permittee, by the owner of the real property subject to the permit;

(2) a specific date of the transfer of the permit and plan responsibility, coverage, and liability is established in the transfer agreement;
(3) the department has determined that no change to the permit and plan other than the administrative change is necessary;
(4) the new permittee and owner have submitted the application information required by 20.11.20.15 NMAC if changes have been made to the permit and plan as deemed necessary by the department;
(5) no grounds exist for permit termination, as otherwise provided by 20.11.20 NMAC; and
(6) the transfer agreement has been approved in writing by the department.

I. By accepting a permit, the permittee agrees to take all actions required by the fugitive dust control permit issued by the department to prevent a violation of this part, including stopping active operations, if necessary.
If the permittee fails to take all required actions, the owner or operator or designated responsible person, if different, shall be responsible to take all actions required to prevent or satisfactorily resolve a violation of this part, including stopping active operations, if necessary.

J. By issuing a stop work order, the department may require any person to stop all active operations at a site if that person fails to obtain a permit as required by this part.

K. For all projects with a valid permit for a total of 10 acres or more E. After a permit is issued and before the start of active operations, the permittee shall install and maintain a project sign provided by the department or [that they provide] a project sign that meets the requirement of [this part] 20.11.20.14 NMAC. The department will establish uniform design guidelines for the sign to ensure that the sign is reasonably legible to the public. If the required information is provided in an existing project sign that has been established for [any other] another purpose, an additional sign shall not be required to comply with [this part] 20.11.20 NMAC. At a minimum, the sign shall contain the following:
(1) project name; [and]
(2) permittee name; [and]
(3) phone number of designated responsible person or owner; [and]
(4) subcontractor name (optional); [and]
(5) subcontractor phone number (optional); [and]
(6) air quality division phone number; [and]
(7) fugitive dust control permit number; and
(8) [project acreage] total acres of area to be disturbed.

F. The permittee or responsible person shall make the permit available to all employees, agents, subcontractors, and other persons performing work in the area of active operations or inactive disturbed surface areas to assist in maintaining compliance with 20.11.20 NMAC. The permittee or responsible person shall explain the requirements of the permit to appropriate employees, contractors and agents working at the site. Upon request, the permittee shall provide information regarding how to obtain a copy of the permit from the department.

G. It is the responsibility of the permittee or responsible person to ensure that the permit or amended permit contains current contact information and that a copy is maintained at the work site and is provided to the department upon request. Failure to maintain and provide up-to-date contact information shall be a violation of 20.11.20 NMAC.

H. The department may amend or renew the permit if requested to do so by the permittee. No fee shall be charged for amending or renewing a permit, unless there will be an increase in the number of acres subject to surface disturbance. Both the department and the permittee must sign an amended permit before it will be effective. The department is not required to sign a renewed permit unless the renewed permit increases the number of acres subject to surface disturbance. An amended or renewed permit that involves an increase in the number of acres subject to surface disturbance shall require payment of fees as required by 20.11.2 NMAC.

20.11.20.15 FUGITIVE DUST CONTROL CONSTRUCTION PERMITS; MINIMUM PERMIT APPLICATION REQUIREMENTS: Proposed fugitive dust control construction permit applications shall be submitted on forms provided by the department. Fugitive dust control plans may be submitted in any format including [duplicates] a copy of a program [required to comply] that complies with any other statutes or regulations so long as [they conform to the information requirements of this part] the plan provides reasonably available control measures whose purpose is to mitigate fugitive dust and the plan meets the objectives of 20.11.20 NMAC. If extraneous information is supplied that does not apply to mitigation of fugitive dust [control], then the dust control measures shall be clearly identified in the plan or the permit application shall be deemed incomplete and shall be rejected. An incomplete permit application shall be processed as described in Subsection C of 20.11.20.18 NMAC.

Proposed fugitive dust control permit applications shall include the following:
A. [permittee] name, address, telephone number and fax number of permittee; [and]
B. owner’s name, address, telephone number and fax number if different from permittee; [and]
C. operator’s name, address, telephone number and fax number if different from Permittee; and
D. if different than the permittee, the name, address, telephone number and fax number of the responsible person or official designated in writing on the permit who is agreeing to, and shall be responsible for activities on-site on the permitted site. The department shall first attempt to contact the responsible person or official to resolve regarding a violation of this part, the permit; [and]
E. anticipated project start date which must be no fewer than 10 [working] business days from the department’s receipt of the permit application for areas containing greater than three quarters of an acre but no greater than 25 acres, [nor] and no fewer than 20 [working] business days from the department’s receipt of the permit application for areas containing more than 25 acres; [and]
F. anticipated project end completion date; [and]
G. project description; [and]
H. project location, including:
   (1) street address, if available; and
   (2) universal property code, latitude and longitude or universal transverse mercator (UTM) coordinates, if reasonably available; and
I. project location including, if available, street address, major cross streets or nearby intersection;
J. total area of disturbance in acres or square feet; [and]
K. a description of the sequencing of the active operations, if phasing is used to reduce the [per-acre fees due] total disturbed area at any time; [and]
L. estimated total volume of bulk material being handled [e.g. cubic yards] in cubic yards, including any bulk material being imported, exported or relocated; [and]
M. location from which bulk material is being imported to the site and a statement regarding whether the site where the imported material originates will have a separate fugitive dust control permit, or provide written information to the department as soon as known; [and]
N. location to which bulk material from the site is being exported and a statement regarding whether the site to which the material is to be exported will have a separate fugitive dust control permit, or provide written information to the department as soon as known; [and]
O. whether an approved drainage plan exists pursuant to city of Albuquerque or Bernalillo county ordinances and, upon request by the department, provide a copy of the drainage plan; [and]
P. site map (e.g. zone atlas page, aerial photograph); [and]
Q. type of work being performed and appropriate reasonably available control measures, as described in Section 20.11.20.23 NMAC, or other effective control measures proposed to be used in the fugitive dust control plan [see Section 20.11.20.23 NMAC]; and
R. a statement that effective contingency fugitive dust control measures shall be taken by the permittee if the control measures [in Subsection Q] required by Subsection P of 20.11.20.15 NMAC are not effective in maintaining compliance with [this part] 20.11.20 NMAC; [and]
S. a commitment to comply with provisions of Subsection B of 20.11.20.16 NMAC if the permittee chooses to preserve the ability to qualify for a high wind affirmative defense; [and]
T. high wind contingency measures that will be implemented when high winds occur; [and]
U. a description of the actions the permittee will take to mitigate damage caused by fugitive dust if generated by active operations or an inactive disturbed surface area on the permitted site; [and]
V. other proposed conditions [agreed to by the owner or operator and the department; and]
W. [signatures] signature of the permittee, and, if a different person, [signatures] signature of the owner, operator and/or any [designated] responsible person [or official] certifying that the information in the fugitive dust control permit application is true, accurate and complete, and certifying that [the] all actions necessary to comply with [this part] 20.11.20 NMAC will be taken, including suspending active operations if necessary to comply with the provisions of [this part] 20.11.20 NMAC; and
X. a statement regarding whether bulk material will be stockpiled at the project site, the dimension of each stockpile, and the reasonably available control measures or other effective control measures that will be used at the stockpile area to comply with 20.11.20 NMAC.

[20.11.20.15 NMAC - Rp, 20 NMAC 11.20. II.2 - 9, 3/1/04, 3/17/08]
20.11.20.16  HIGH WIND EVENT REQUIREMENTS; HIGH WIND EVENT AFFIRMATIVE

DEFENSE:

A. General requirements: [A high wind event is a time period of five consecutive minutes with an average wind speed of 30 miles per hour (high wind event threshold level) or higher.] During a high wind event, all persons responsible for fugitive dust control activities on publicly or privately-owned real property [who own or operate a fugitive dust source] where active operations have occurred or are occurring in inactive disturbed surface areas exist must use reasonably available control measures or other effective measures to prevent fugitive dust from leaving the [source] property [and] All such persons shall implement the control measure [in] required by Paragraph (5) of Subsection C, of [this section] 20.11.20.16 NMAC.

B. High wind affirmative defense: If the department initiates an administrative enforcement action against either a permittee or a [designated] responsible person, or both (respondent) alleging a violation of a permit or [this part] 20.11.20 NMAC during a high wind event, the respondent may assert an affirmative defense in the enforcement action if the respondent establishes by credible evidence that respondent complied with the requirements established in Subsection C of 20.11.20.16 NMAC [below]. In order to successfully assert the affirmative defense, during the entire duration of a permit the respondent shall utilize the applicable controls described in Subsection C of 20.11.20.16 NMAC [below], regardless of whether or not a high wind event exists, with the exception of Paragraph (5) of Subsection C of 20.11.20.16 NMAC [below], which [applies only] shall be required during a high wind event. The affirmative defense shall not be available if respondent has failed to diligently perform the control measures specified in Paragraphs (1) through (5) of Subsection C of 20.11.20.16 NMAC. The availability of the affirmative defense shall not change the respondent’s potential liability for any damage caused by fugitive dust leaving the permitted property, and the affirmative defense shall not change the permittee’s obligation to remove fugitive dust originating from the permitted source, or otherwise remedy the damage, as required by Subsection D of 20.11.20.12 NMAC. The board, its members, and employees and officials of the city of Albuquerque and the county of Bernalillo shall not incur individual liability for damage to persons or property caused by fugitive dust leaving the permitted property.

C. Mandatory control measures: To assert a high wind event affirmative defense as described in Subsection B of 20.11.20.16 NMAC [above], a permittee [must] shall utilize the applicable control measures in Paragraphs (1) and (2) of Subsection C of 20.11.20.16 NMAC on an ongoing basis. Without prior notice to the department, the permittee may use the measure in Paragraph (3) of Subsection C of 20.11.20.16 NMAC in place of the measure in Paragraph (1) of Subsection C of 20.11.20.16 NMAC. After receiving written permission from the department, the permittee may substitute the measures in Paragraph (4) for the measures in Paragraphs (1), (2), and/or (3) of Subsection C of 20.11.20.16 NMAC. All permittees, whether or not they intend to assert a high wind affirmative defense, shall implement the measure in Paragraph (5) of Subsection C of 20.11.20.16 NMAC; during a high wind event. [The mandatory control measures are described in Paragraphs (1) through (5) of this Subsection.]

(1) Use of wet suppression sufficient to provide and maintain a soil moisture content of not less than twelve percent, as used for purposes of determining the optimal compaction rating of the soil. To determine the moisture content, first, scrape away the top one-half to one inch of the soil. The soil sample shall be taken from the freshly scraped area. Soil moisture shall be determined by firmly squeezing by a small handful of sample soil to make an irregular shaped ball of soil. Upon observing the ball and the hand, there shall be credible evidence of the soil-binding together with the ball retaining shape due to moisture in the soil. The ball may exhibit some cracking, but shall not collapse due to low moisture content when the hand is opened. The respondent or the department shall test samples obtained from a minimum of three separate representative locations on the permitted property. To demonstrate compliance, at least two-thirds of the samples must exhibit the required moisture content. For additional details regarding the hand test method of determining soil moisture content, use the U.S. Department of Agriculture Natural Resources Conservation Service’s Program Aid Number 1619, Estimating Soil Moisture by Feel and Appearance published in 1998. Other similar guides have been published such as the NebGuide G84-690-A published by Norman L. Klocke et al. for the university of Nebraska in 1998. A copy of these guidelines may be obtained from the department. The respondent or the department may also use a reasonably accurate commercially-available instrument to determine soil moisture content, including analysis determined with a proctor method. The respondent or the department may contract with a public or private laboratory to perform a proctor or other method. For proctor analyses, either the standard proctor (ASTM D-698) or the modified proctor (ASTM D-1557) may be used. Where possible, methods ft test, ASTM D2922-91 (nuclear density).]

Use of wet suppression sufficient to attain and maintain eighty percent of the optimal moisture content of the soil as determined by a proctor analysis performed by a certified public or private materials testing laboratory. For proctor analyses, either the standard proctor (ASTM D-698) or the modified proctor (ASTM D-1557) may be used. Daily, representative testing of the soil moisture content shall be taken on exposed new surfaces after the top one-half to one inch of the soil is removed at the sampling area. Three times each day, at intervals that are equally spaced throughout the work day, the respondent shall test and record the soil moisture content at three separate
representative locations on the permitted property, which will result in a minimum of nine tests each day. To
demonstrate compliance, any set of three tests shall average eighty percent of the optimal moisture content of the
soil and no individual test shall be less than seventy percent of the optimal moisture content of the soil. Failure to
meet the soil moisture content standards as required by Subsection C of 20.11.20.16 NMAC for any set of three tests
shall require that the respondent immediately apply necessary control measures at the portion or portions of the
representative area where the soil moisture content tested as insufficient, and re-test the same representative
locations, as necessary, until the soil moisture content complies with the standards as required by Subsection C of
20.11.20.16 NMAC. The respondent or the department shall use a reasonably accurate commercially-available
instrument to determine soil moisture content. Where possible, methods for determining soil moisture content shall
be consistent with ASTM Standards (e.g. ASTM D-1556-90 – Sand Cone test, ASTM D2922-91 - nuclear density).
All tests for soil moisture content shall be documented and retained for the duration of the permit, and shall be made
available to the department upon request.

(2) Use of properly-maintained fabric fencing material around the perimeter of the disturbed surface
area with openings no wider than necessary to allow vehicles to enter or exit the area. The fencing material shall be
anchored approximately six inches below the surface on the bottom edge, and when installed shall be approximately
24 or more inches [high] above the existing natural or man-made surface. The fence shall be installed in a durable
manner. For example, one durable installation method involves use of steel T-posts spaced approximately eight to
10 feet apart with steel mesh wire used as a reinforcement backing to the fabric. Use of fabric fencing standards
associated with the national pollutant discharge system may be approved by the department if they are consistent
with the requirements of Paragraph (2) of Subsection C of 20.11.20.16 NMAC. The department may also approve
alternative fencing material if it provides equal or better control of fugitive dust. Alternatives may include solid
walls or sturdy fences that effectively control fugitive dust. To maintain effectiveness of the fence, fugitive dust that
accumulates on either side of the fencing must shall be removed promptly.

(3) Use of chemical dust suppressants applied in amounts, frequency and rates recommended by the
manufacturer, and maintained as recommended by the manufacturer sufficient to substantially reduce fugitive dust
leaving the fugitive dust source while active operations are idle, usually used when active operations are suspended
for more than 48 hours.

(4) A department-approved alternative dust control measure or measures that provide fugitive dust
control that is equal to or better than measures in Paragraphs (1), (2), and/or (3) of Subsection C of 20.11.20.16
NMAC. Before a permittee may substitute an alternative control measure, the department must approve the control
measure in writing as a permit amendment.

(5) Stopping active operations that are capable of producing fugitive dust.

D. [Determination of high wind event threshold level (threshold level):] The department and the
respondent shall use a reasonably accurate recording anemometer to measure the wind speeds in order to determine
whether the threshold level has been reached or exceeded. The measurement time period used to determine the
threshold level shall be five consecutive minutes. Wind velocity measurements by the department and the
respondent shall be taken on the permitted property or within 200 feet of the permitted property being evaluated.
Wind measurement results shall be documented, and shall be made available to the permittee and/or person
responsible for controlling fugitive dust at the permitted property being inspected.] Active Operations during an
announced high wind event: The department shall use National Weather Service (NWS) data, recorded at either
the Albuquerque International Airport (Sunport) or Double Eagle II Airport, in order to determine forecasted or
actual wind speeds when announcing that a high wind event may or will occur. Wind velocity measurements taken
in the field by the department, the responsible person or permittee shall be taken at a representative active operation
area on the permitted property or by the department within 200 feet of the permitted property being evaluated to
determine whether active operations can be continued, resumed or initiated. Wind measurement results shall be
documented and retained throughout the duration of the permit, and shall be made available to the department and
the permittee and/or person responsible for controlling fugitive dust at the permitted property. A continuous one-
hour wind velocity measurement with an average wind speed of less than 20 miles per hour, along with on-site
stable soil conditions and effective dust control measures, as stated in the fugitive dust control plan, shall be
sufficient to allow active operations during an announced high wind event. However, fluctuations in average wind
speed and high wind gusts may re-occur and can cause ineffective dust control during active operations, which may
result in a violation of 20.11.20 NMAC. Therefore, the responsible person or permittee shall continuously assess
wind conditions and on-site soil conditions during an announced high wind event and shall maintain the reasonably
available control measures which include stopping active operations as required by Paragraph (5) of Subsection C of
20.11.20.16 NMAC.

E. Limitations on use of affirmative defense: A respondent may not assert the affirmative defense
described in [this section] 20.11.20.16 NMAC:

(1) against an action for injunctive relief; or
A. Any person who is required to submit a fugitive dust control construction permit application and plan for active operations that will disturb at least three-quarters of an acre, but no more than 25 acres, shall submit the permit application and plan along with the applicable fees to the department no fewer than 10 working business days prior to the start of active operations. Within 10 business days of the department receiving the permit application, plan and fees, the department will approve the permit, approve the permit with conditions or deny the permit.

B. Any person who is required to submit a fugitive dust control permit application and plan for active operations that will disturb more than 25 acres shall submit the permit application and plan along with the applicable fees to the department no fewer than 20 working business days prior to the start of active operations. Within 20 business days of the department receiving the permit application, plan and fees, the department will approve the permit, approve the permit with conditions or deny the permit.

C. Within 10 working days of the department receiving the permit application and fees for active operations that will disturb three-quarters of an acre or more, but no more than 25 acres, the department will approve the permit, approve the permit with conditions or deny the permit.

D. Within 20 working days of the department receiving the permit application and fees for active operations that will disturb more than 25 acres, the department will approve the permit, approve the permit with conditions or deny the permit.

E. If the permit is not issued or denied within the requisite time frames enumerated in Subsections C and D of 20.11.20.18 NMAC, and 30 working days have elapsed from the filing of the permit application, the permit shall be automatically approved and operations may commence.

F. The permittee or designated responsible person or official shall make the permit available to all employees, agents, sub-contractors, and any other person performing work in the area of active disturbance to assist in maintaining compliance with this part. The permittee shall explain the requirements of the permit to appropriate employees, contractors and agents working at the site. The permittee shall provide information to any other interested person in the area as to where they may obtain a copy of the permit from the department.

G. It is the responsibility of the permittee or designated responsible person or official to ensure that the fugitive dust control permit or amended permit contains current contact information and that a copy is maintained at the work site and is provided to the department. Failure to maintain and provide up-to-date contact information shall be a violation of this part.

H. The department may amend the permit when requested to do so by the permittee. No fee shall be charged for amending a permit, unless the amendment increases the number of acres covered by the permit. Both the department and the permittee must sign an amended permit.

I. The department shall implement an electronic filing system using the Internet in order to expedite processing and filing of fugitive dust control permits and plan applications.

J. The fugitive dust control plan may be in any form including a copy of a program that complies with any other statute or regulation so long as the plan provides reasonably available control measures whose purpose is to mitigate fugitive dust and the plan meets the objectives of 20.11.20 NMAC. If the plan does not specifically enumerate the control measures proposed to mitigate fugitive dust, the permit application shall be deemed incomplete and shall be rejected. If an incomplete application is rejected, a new or amended application may be filed and the time limits in Subsections A or B of 20.11.20.18 NMAC shall apply as if the initial application had not been filed.

D. If all requirements of 20.11.20 NMAC have been met by the applicant, the department shall issue a permit to the permittee, which shall authorize commencement of active operations. If the department has not approved, denied, or notified the applicant regarding the permit application within 30 business days of the department’s receipt of the permit application, plan and fees, then the permit shall be automatically approved and operations may commence if the permittee uses the reasonably available control measures and fugitive dust control plan as submitted in the application. However, if the measures and plan are not effective, the department may initiate an enforcement action for violation of 20.11.20 NMAC.

20.11.20 NMAC  Public Review Draft  12/29/07
20.11.20.19 PUBLIC AND PRIVATE UNPAVED ROADWAYS, SHORT-CUTS AND UNPAVED PARKING AREAS:

A. [Beginning one year after the effective date of this part.] No unpaved roadways greater than one-quarter mile in length and no unpaved parking areas may be constructed or allowed to be constructed or reconstructed on any publicly-owned land or privately-owned land real property, unless the roadway or parking area is stabilized and maintained consistent with good engineering and maintenance practices, the owner has applied for and received a permit pursuant to 20.11.20.13 NMAC or 20.11.20.14 NMAC. Owners in possession of a valid fugitive dust control permit that wish to construct additional unpaved roadways shall apply for an amendment to their permit which shall include payment of any fees required by 20.11.2 NMAC. In addition, [beginning one year after the effective date of this part] no privately or publicly owned unpaved short-cut of any length on private or public property may be constructed or be allowed to remain usable when it is evident the short cut is being used by motor vehicle drivers to save time by avoiding use of a dedicated and authorized roadway. A variance from [this] Subsection A of 20.11.20.19 NMAC may be granted by the board in a manner consistent with the variance procedures provided in [24-2-8 NMSA] 20.11.7 NMAC.

B. Owners or operators shall use reasonably available control measures on all unpaved roadways and unpaved parking areas so visible fugitive dust leaving the property is not visible longer than a total of 15 minutes in any 60 minute observation period using visible fugitive dust detection method described in Section 20.11.20.26 NMAC of this part, or an equivalent method approved in writing by the department and shall comply with the general provisions established in 20.11.20.12 NMAC.

C. [Existing] Public unpaved roadway; complaints. If the department receives a [written] fugitive dust complaint regarding an [existing] unpaved public roadway, [including any roadways regulated pursuant to Subsection B of 20.11.20.13 NMAC,] the department will forward the complaint by hand delivery, inter-office mail delivery or certified mail, return receipt requested, to the governmental agency responsible for maintenance of the roadway. Within 45 calendar days from the date the complaint was received by the responsible agency, the responsible agency shall make a reasonable effort to address the complaint, and the governmental agency shall provide the department with a written report of the actions taken to resolve the complaint. Failure of the responsible agency to submit a timely report shall be a violation of [this part] 20.11.20 NMAC.

20.11.20.20 ABRASIVE PRESSURE BLASTING OPERATIONS: [All persons performing] A person who performs abrasive pressure blasting operations shall employ reasonably available control measures or other effective control measures at all times to comply with 20.11.20.12 NMAC and shall substantially reduce fugitive dust emissions that are leaving the property where the abrasive pressure blasting operations are taking place. [Any person] A person who is conducting abrasive pressure blasting operations is not required to obtain a fugitive dust control permit from the department. [Note that] However, stationary source permitting regulations, such as [Part 41] 20.11.41 NMAC and [Part 42] 20.11.42 NMAC, may apply to pressure blasting operations.

20.11.20.21 [MECHANICAL (LEAF) BLOWERS; PROPER USE REQUIRED:] Any person using a mechanical blower (e.g. leaf blower) or other device designed to use forced air to move dust or organic material and debris shall take all reasonable efforts to ensure that leaves, dust and other debris do not remain deposited upon publicly-owned property as the result of the use of the leaf blower or other device. The intent of this requirement is to prevent the dust, material and debris from becoming ground up by abrasive action of tires and then being entrained into the atmosphere as particulate matter.] CONTROL OF GREENWASTE MATERIAL: To prevent greenwaste from becoming ground up by the abrasive action of tires, which may then be entrained into the atmosphere as particulate matter, all persons causing, directing or authorizing greenwaste to be deposited on publicly-owned real property shall promptly remove or cause the removal of the greenwaste.

20.11.20.22 DEMOLITION AND RENOVATION ACTIVITIES; [PERMIT REQUIRED;] FUGITIVE DUST CONTROL CONSTRUCTION PERMIT AND ASBESTOS NOTIFICATION [REQUIRED]

REQUIREMENTS: No person shall demolish any building containing over 75,000 cubic feet of space without first obtaining delivering to the department a fugitive dust control construction permit application and fugitive dust control plan with the fee required by 20.11.2 NMAC. No active operations shall commence until a department manager, supervisor, scientist, field operations officer or health specialist signs a fugitive dust control construction permit and a copy of the signed permit is available at the site of active operations. Failure to obtain a fugitive dust
control construction permit prior to commencement of demolition activities as described in 20.11.20.22 NMAC shall be a violation of 20.11.20 NMAC. All demolition and renovation activities shall employ reasonably available control measures at all times, and, when removing asbestos containing materials (ACM), shall also comply with the federal standards incorporated in 20.11.64 NMAC, Emission Standards for Hazardous Air Pollutants for Stationary Sources.  

A. Unpaved roadways:

(1) paving using recycled asphalt, asphaltic concrete, concrete, or petroleum products legal for such use;

(2) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

(3) using wet suppression; or

(4) using traffic controls, including decreased speed limits with appropriate enforcement; other traffic calming methods, vehicle access restrictions and controls; road closures or barricades; and off-road vehicle access controls and closures.

B. Paved roadways:

(1) cleaning up spillage and track out as necessary to prevent pulverized particulates from being entrained into the atmosphere;

(2) using paved or gravel entry/exit aprons with devices, such as steel grates, capable of knocking mud and bulk material off vehicle tires;

(3) using on-site wheel washes; or

(4) performing regularly scheduled vacuum street cleaning or wet sweeping with a sweeper certified by the manufacturer to be efficient at removing particulate matter having an aerodynamic diameter of less than 10 microns (i.e. PM10).

C. Trucks hauling bulk materials on public and private roadways:

(1) using properly secured tarps or cargo covering that covers the entire surface area of the load;

(2) preventing leakage from the truck bed, sideboards, tailgate, or bottom dump gate;

(3) using wet suppression to increase moisture content of the bulk materials being hauled;

(4) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer; or

(5) maintaining a minimum of six inches of freeboard from the rim of the truck bed. Freeboard means the vertical distance from the highest portion of the load abutting the bed and the lowest part of the top rim of the truck bed.

D. Active operations in construction areas and other [land] surface disturbances:

(1) Short term control measures may include:

(a) wet suppression;
(b) dust suppressants applied in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

c) temporary upwind windbreaks, including fabric fences where the top [is] at least four feet above grade, and with the bottom of the fence sufficiently anchored to the ground to prevent material from blowing underneath the fence; all windbreaks and fabric fences should be maintained in an upright and functional condition at all times until no longer needed to prevent or abate fugitive dust; all accumulated material on the windward side of the windbreak should be periodically removed to prevent failure of the windbreak;

d) watering the site at the end of each workday sufficiently to stabilize the work area;

e) applying dust suppressants in amounts, frequency and rates recommended by the manufacturer on the worksite at the end of each workweek if no active operations are going to take place over the weekend or if active operations stop for more than two consecutive days;

(f) starting construction at the location that is upwind from the prevailing wind direction and stabilizing disturbed areas before disturbing additional areas;

(g) stopping active operations during high wind; or

(h) clean up and removal of track-out material.

(2) Long term control measures may include:

(a) site stabilization using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

(b) reseeding using native grasses as specified in Section 20.11.20.24 NMAC;

(c) xeriscaping;

(d) installing parallel rows of fabric fencing or other windbreaks set perpendicular to the prevailing wind direction either onsite or on a nearby property with the permission of the nearby property owner;

(e) surfacing with gravel or other mulch material with a size and density sufficient to prevent surface material from becoming airborne;

(f) mulching and crimping of straw or hay as specified in Section 20.11.20.27 NMAC of this part Subsection D of 20.11.20.24 NMAC;

(g) installing permanent perimeter and interior walls;

(h) using conventional landscaping techniques; or

(i) clean up and removal of track-out material.

E. Bulk material handling:

(1) using spray bars;

(2) applying wetting agents (surfactants) to bulk material;

(3) using wet suppression through manual or mechanical application;

(4) adding dust suppressants to bulk materials in amounts, frequency and rates recommended by the manufacturer and maintained as recommended by the manufacturer;

(5) stopping bulk material handling, processing, loading or unloading during high wind conditions;

(6) reducing process speeds; or

(7) reducing drop heights.

F. Industrial sites:

(1) paving roadways and parking area with recycled asphalt, asphaltic concrete, concrete, or petroleum products legal for use;

(2) performing regularly scheduled vacuum street cleaning or wet sweeping;

(3) regularly using wet suppression on unpaved areas;

(4) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by the manufacturer;

(5) installing wind breaks;

(6) installing enclosures;

(7) installing on-site anemometers to measure wind speed; the anemometer should trigger a suitable warning mechanism such as a strobe light or an audible alarm (that will not violate any applicable noise ordinance) to notify on-site personnel of high wind conditions;

(8) increasing wet suppression applications before and during high wind conditions; or

(9) stopping active operations during high wind conditions.

G. Demolition and renovation activities when asbestos-containing materials are not present:

(1) using constant wet suppression on the debris piles during demolition;

(2) using water or dust suppressants on the debris pile, applied in amounts, frequency and rates recommended by the manufacturer;

(3) using enclosures;
(4) using curtains or shrouds;
(5) using negative pressure dust collectors; or
(6) stopping demolition during high wind conditions.

**H. Milling, grinding or cutting of paved or concrete surfaces:**

(1) constantly using wet suppression;
(2) [ongoing clean up of milled, ground or cut material by using wet sweeping] continuous wet sweeping during milling, grinding, or cutting operations;
(3) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by the manufacturer;
(4) using enclosures; or
(5) using curtains or shrouds.

**I. Pressure blasting operations:**

(1) using non-friable abrasive material;
(2) using curtains, enclosures or shrouds;
(3) using negative pressure dust collectors;
(4) using constant wet suppression;
(5) maintaining ongoing clean up of abrasive material; or
(6) stopping active operations during high wind conditions.

**J. Spray painting and other coatings:**

(1) using enclosures that comply with applicable fire codes; or
(2) using curtains, enclosures or shrouds.

**K. High wind contingency measures:**

(1) installing and using on-site anemometers to measure wind speed; the anemometer should trigger a suitable warning mechanism such as a strobe light or an audible alarm that will not violate any applicable noise ordinance to notify on-site personnel of high wind conditions;
(2) using constant wet suppression;
(3) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer;
(4) using wetting agents or surfactants on disturbed areas, bulk materials or stockpiles;
(5) slowing down process; or
(6) shutting down active operations.

**L. Stockpile Formation:**

(1) Active stockpiles:
   (a) applying wet suppression on a regular basis;
   (b) utilizing wind breaks (fabric fencing or other materials);
   (c) reducing vehicle speeds or using other traffic calming measures (e.g. sculpted piles); or
   (d) restricting access to stockpile areas during non-work hours.
(2) Inactive stockpiles:
   (a) maintaining a stable outer crust over stockpile area;
   (b) using dust suppressants applied in amounts, frequency and rates recommended by the manufacturer, and maintained as recommended by the manufacturer;
   (c) restricting access to stockpile areas; or
   (d) utilizing wind breaks (fabric fencing or other materials).

[20.11.20.23 NMAC - Rp, 20 NMAC 11.20. II.2 - 9, 3/1/04, 3/17/08]

**20.11.20.24 NATIVE GRASS SEEDING AND MULCH SPECIFICATIONS:**

**A.** If the fugitive dust control permit includes provisions to revegetate a disturbed area, the permittee may use the following specifications described in 20.11.20.24 NMAC. When properly applied and maintained, these specifications have provided reasonably successful results in the past in Bernalillo county. They are included here as a reference for permittees and others who choose to use native revegetation as a long-term reasonably available control measure. However, use of these specifications does not guarantee success. Failure of any revegetation method as a long-term reasonably available control measure requires re-application or other control method approved by the department. The disturbed area shall maintain compliance with 20.11.20 NMAC.

(1) The native seed species used and rate of application should be as shown provided in Subsection F of Section 20.11.20.24 NMAC.
(a) If the area to be seeded is along a recreational trail of any type, the seed mixes for either
type of soil listed in Subsection F of [this section] 20.11.20.24 NMAC should not include four-wing saltbush and the
seeding rate should be reduced by one pound per acre.
(b) **Seeds may be pre-mixed by a seed dealer.** Each pre-mixed bag of seed should be sealed
and labeled by the seed dealer in accordance with federal seed laws and New Mexico department of agriculture
labeling laws. The label should include: variety, kind of seed, lot number, purity, germination, percent crop, percent
inert, percent weed (including noxious weeds), origin, test data and net weight. Federal seed laws require that
analysis shall be no older than five months for seed shipped interstate and no older than nine months for seed
shipped intra-state.

(c) **48 hours before seeding,** the owner or operator should give written notice to the
department by hand delivery or facsimile, requesting inspection of the sealed seed bags to be used. The department
may inspect the sealed seed bags and labels.

(2) **Fertilizer and soil amendments:** Unless otherwise specified in the fugitive dust control permit,
no fertilizer or other soil amendments are required on areas to be reseeded.

(3) **Mulch:** Areas to be reseeded should be mulched as described below unless otherwise specified in
the permit.

(a) **Hay mulch:** Perennial native or introduced grasses of fine-stemmed varieties should be
used unless otherwise specified in the plan. At least 65 percent of the herbage by weight of each bale of hay should
be 10 inches in length or longer. Hay with noxious seed or plants should not be used. Rotted, brittle, or moldy hay
are not considered acceptable. Marsh grass or prairie hay composed of native grass of species to be seeded is
considered acceptable. Tall wheat grass, intermediate wheat grass, switch grass, or orchard hay will be acceptable if
cut prior to seed formation. Marsh grass hay should be composed of mid and tall native, usually tough and wiry
grass and grass-like plants found in the lowland areas within the Rocky Mountain region. Hay should be properly
cured prior to use. Hay that is brittle, short fibered or improperly cured is not considered acceptable. Hay mulch
should be crosshatched crimped to minimum depth of two inches.

(b) **Straw mulch:** Small grain plants such as wheat, barley, rye, or oats should not be used.

Alfalfa or the stalks of corn, maize or sorghum are not considered acceptable. Material which is brittle, shorter than
10 inches or which breaks or fragments during the crimping operation are not considered acceptable. Straw mulch
should be crosshatched crimped to minimum depth of two inches.

(c) **Gravel mulch:** Gravel mulch should be a maximum of three-quarter to one inch in
diameter and must have been crushed or screened with a minimum of one angular face. Experience has
demonstrated that gravel mulch provides very successful results on steep slopes and other areas that may be difficult
to stabilize.

(d) **Erosion control mats, fabric or blankets:** The type of erosion control mats, fabric or
blankets used should be specified in the fugitive dust control permit.

**B. Seed bed preparation:**

(1) Prior to starting seed bed preparation, the final grades of all earthwork should be inspected and
certified by a New Mexico licensed engineer, and a copy of the certification should be delivered to the department:

   (a) no soil preparation should be performed when the surface is wet or muddy or when the soil
is so moist that the soil is not fully loosened by the discing operation;

   (b) if erosion, crusting or re-compaction occurs in an area before seeding, mulching and
crimping are successfully completed, the area should be reworked, beginning with seedbed preparation.

(2) **Mechanical preparation:** The seedbed should be loosened to a minimum depth of six inches by
disc or harrow. Areas of heavy or compacted soil may require additional preparation by chiseling or ripping if
discing alone does not result in preparation to the full minimum depth of six inches. The soil should be worked to a
smooth surface and should be free of clods, stones four inches in diameter and larger, and debris or foreign material
that could interfere with seeding or crimping operations.

(3) **Hand preparation:** Areas which cannot be prepared with mechanized equipment because of
small size, irregular shape or slope may be prepared to a minimum depth of two inches using hand tools or a
rototiller, as specified in the permit.

**C. Seeding:**

(1) Should not start until the seed bed preparation has been inspected and certified by a New Mexico
licensed engineer, a New Mexico licensed landscape architect, or other professional approved by the department
(e.g. a department certified erosion control specialist). Notice in writing or by facsimile providing certification
pertaining to the seed bed preparation should be given to the department at least 48 hours prior to beginning seeding
operations so that the department has an opportunity to inspect the site. No seeding operations should be conducted
when steady wind speeds exceed 10 miles per hour.

(2) **Seed application:**
Upon completion of the reseeding project, the permittee should deliver written notice to the department in a timely manner, certifying completion of seeding project.

Consistent with the manufacturer's recommendations, erosion control materials should be used. Anchoring of the erosion control materials should be as specified in the fugitive dust control permit. Cross-hatch pattern should be used when mulching.

If small grain straw mulch is used, the mulch should be crimped in two directions in a cross-hatch pattern. It is strongly recommended that any area being seeded or mulched be adequately fenced and posted to prevent trespass traffic.

All seeded areas should be mulched unless otherwise specified in the fugitive dust control permit. Mulching should stop when wind speeds exceed 15 miles per hour.

(a) Drill seeding: Drill seeding is highly recommended. Seed should be applied with a "rangeland" type seed drill equipped with packer wheels. Seed should be drilled to a maximum depth of one-half inch. Direction of seeding should be across slopes and on the contour whenever possible.

(b) Broadcast seeding: Seed may be applied using the broadcast method when size, irregular shape, or slope exceeding three to one, prevents the use of a seed drill. Seed may be broadcast by hand or by a mechanical seeder provided that the seed is evenly distributed over the seeding area. Areas that are broadcast seeded should be seeded at a rate that is double the rate used for drill seeding. Areas of broadcast seeding should be hand raked to cover seed.

(c) Seeding with gravel mulch: Areas to be gravel mulched should be seeded at double the standard seed rate with one-half the seed applied prior to application of gravel and one-half of the seed applied on the surface of the gravel. Water should be applied in a quantity sufficient to wash seed from the surface and into the gravel.

(d) Hydro seeding: Hydro seeding with native grass will normally only be successful on areas that will be irrigated.

D. Hay or straw mulching:

(1) All seeded areas should be mulched unless otherwise specified in the fugitive dust control permit. On seeded areas that are level or have slopes that are a ratio of three to one or less, any of the four types of mulching below may be used. On erosion control areas or slopes steeper than a ratio of three to one, only gravel mulch or erosion control materials should be used.

(2) Hay mulch should be applied at a minimum rate of one and one-half tons per acre of air dry hay.

(3) Straw mulch should be applied at a minimum rate of two and one-half tons per acre of air dry straw.

(4) Hay or straw mulch should be crosshatched crimped into the soil to a minimum depth of two inches.

(a) The mulch should be spread uniformly over the area either by hand or with a mechanical mulch spreader.

(b) When spread by hand, the bales of mulch should be torn apart and fluffed before spreading.

(c) Mulching should stop when wind speeds exceed 15 miles per hour.

(d) The mulch should be wetted down and allowed to soften for approximately 15 to 20 minutes prior to crimping.

(e) A heavy disc should be used to crimp or anchor the mulch into the soil to a minimum depth of two inches. A mulch-tiller with flat serrated discs at least one-quarter of an inch in thickness, having dull edges with discs spaced six inches to eight inches apart or similar equipment should be used. The discs should be of sufficient diameter to prevent the frame of the equipment from dragging the mulch.

(f) The crimping operations should be across the slope where practical, but not parallel to prevailing winds. In general, crimping should be in a north-south direction or in tight interlocking "S" curves to avoid straight east-west crimp lines.

(g) If small grain straw mulch is used, the mulch should be crimped in two directions in a cross-hatch pattern.

(5) Gravel mulch: Gravel mulch should be laid evenly by hand or by equipment to a thickness of two inches.

(6) Erosion control mats, fabric or blankets: The type of erosion control mats, fabric or blankets used should be as specified in the fugitive dust control permit. Anchoring of the erosion control materials should be consistent with the manufacturer's recommendations.

(7) Upon completion of the reseeding project, the permittee should deliver written notice to the department in a timely manner, certifying completion of seeding project.

E. Protection of native grass seeded area: [44] The person, owner or operator who has elected to use native seeding as a control measure [they] shall be responsible for protecting and caring for the seeded area until plants are fully established. After project completion, the owner or operator [may need to] shall repair any damage to seeded areas caused by pedestrian or vehicular traffic or vandalism. During periods of low rainfall, supplemental watering may be [a way to improve success in establishing] required to successfully establish the native grass seed. Because the owner is responsible for the fugitive emissions leaving the property, failure of the reseeding project shall not be a defense to enforcement of [this part] 20.11.20 NMAC. The owner or operator may find it necessary to reseed or use other reasonably available control measures to bring the property into compliance. The department strongly recommends that any area being seeded or mulched be adequately fenced and posted to prevent trespass traffic.
F. Seed specifications and rates should be used as established by the most recent edition of “City of Albuquerque Standard Specifications for Public Works Construction” as updated by the city or as approved in writing by the department.

G. Variations in seeding due to special environmental conditions: The owner or operator may use a different seeding mixture in order to address special environmental conditions that make it unlikely for success of the reseeding effort. Use of an annual rye (Lolium sp.) or cool season grasses (e.g. barley at 10 pounds per acre) may be added to the seed specification in order to help stabilize soils, especially for disturbed areas comprising 25 acres or more when a significant amount of the [land area] publicly-owned land or privately-owned real property is not expected to be built upon within one year.

[20.11.20.24 NMAC - Rp, 20 NMAC 11.20. II.2 - 9, 3/1/04, 3/17/08]
disagreements. Within two business days after the informal review meeting, a division representative shall mail, hand deliver or deliver by facsimile a statement to the requestor stating whether the department has changed its decision regarding the permit application, and, if so, specifying the change and the reason for the change. A person who participated in a 20.11.20 NMAC permitting action before the department and who is adversely affected by the decision made by the department, may follow the procedures described in 20.11.81 NMAC to petition for a hearing before the board.

[20.11.20.25 NMAC - Rp, 20 NMAC 11.20. II.2 - 9, 3/1/04, 3/17/08]

20.11.20.26 VISUAL DETERMINATION OF FUGITIVE DUST EMISSIONS [VIOLATIONS]: The following method, hereafter called the “visible fugitive dust detection method”, is used to visually determine the total amount of time that fugitive dust emissions are visible during a continuous one-hour observation period. If a trained department observer records visible fugitive dust leaving the property line for the source being evaluated, the observer shall document that the visible fugitive dust is not originating from an upwind source other than the source being evaluated. The observer must be certified by the department as a trained observer. Training shall consist of attendance at and completion of the lecture portion of a Method 9 certification course and familiarity with the written materials provided during the course. The method described in Subsections A through D of 20.11.20.26 NMAC does not require the opacity of emissions to be determined during the observation period, but determines the total amount of time that visible dust emissions are observed leaving a property line.

A. To correctly perform this method, the observer shall use two stopwatches. One stopwatch shall be used to record the continuous one-hour period during which the observations are conducted. This period shall be known as the “observation period.” The second stopwatch shall be used to record the total accumulated amount of time that visible dust emissions are visible during the observation period. The second stopwatch shall establish the “visible fugitive dust emission time”.

B. [Prior to the observation, the observer shall determine the location of potential fugitive dust source(s) and the location of the downwind property line for the source. The observer shall sketch the location of the fugitive dust source(s), and when feasible, record the observer’s location on a copy of the fugitive dust control permit map or aerial photograph; and sketch or photograph the location of the downwind property line and physical features that help define the property line; and sketch or photograph the observer’s location during the observations; and sketch the position of the sun relative to the observer. The observer shall document that the observed fugitive dust is not originating from an upwind source other than the source being evaluated. The observer must be at least 15 feet away from the visible fugitive dust emissions, and not more than one-quarter mile away.] Prior to the observation, the observer shall:

(1) determine the location of potential fugitive dust source(s) and the location of the downwind property line for the source;
(2) sketch the location of the fugitive dust source(s), and, when available during the observation, record the observer’s location on a copy of the fugitive dust control permit map or aerial photograph;
(3) sketch or photograph the location of the downwind property line and physical features that help define the property line;
(4) sketch or photograph the observer’s location during the observations;
(5) sketch the position of the sun relative to the observer;
(6) document that the visible fugitive dust is not originating from an upwind source other than the source being evaluated; and
(7) maintain a minimum distance of at least 15 feet from the visible fugitive dust being observed, and a maximum distance of no more than one-quarter mile away.

C. The observer shall record:

(1) observer’s name and affiliation; and
(2) date of observation; and
(3) company name, property owner or operators, if known; and
(4) description of the fugitive dust sources; and
(5) wind speed and direction (explain method of determining the wind speed, i.e., hand-held anemometer); and
(6) sky conditions.
D. [At the beginning of the observation period.] The observer shall record the time of day when the observation begins. The observer shall start the first stopwatch to begin recording the observation period and shall observe along the property line. With the second stopwatch, the observer shall record the length of time [dust emissions are visible leaving] visible fugitive dust is crossing the property line. The observer shall stop the second stopwatch when the visible [dust emissions stop] fugitive dust is no longer detected crossing the property line. The observer shall continue this procedure during the continuous one-hour observation period or until the [dust] visible fugitive dust emission time [establishes] totals 15 minutes or greater during the continuous one-hour observation period, which is a violation of [this part] 20.11.20 NMAC. The observer shall record the [actual] time of day when the observations [ended] ends. If the observer determines that the visible fugitive dust being observed is of an intensity that may cause immediate danger to human health or safety, then, before the observation period is completed, the observer shall attempt to immediately contact the responsible person, permittee or owner.

E. [Observer breaks: The observer may take a break periodically, but for no more than 15 minutes. During the break, the observer shall stop the both stopwatches and shall record the actual time of day from the start to the end of the break.]

20.11.20.27 ENFORCEMENT:

A. [It is the responsibility of all persons to whom this part applies to] All persons shall use control measures that are effective in maintaining compliance with [this part] 20.11.20 NMAC. Violation of a fugitive dust control permit or fugitive dust control plan approved by the department is a violation of 20.11.20 NMAC. If a violation occurs or is occurring, the department may issue a verbal warning, issue a written warning, [require a violator to pay] initiate an administrative enforcement action and assess an administrative civil penalty, and [may] take all other actions authorized by law and equity, including issuing a stop work order as authorized by [this part] 20.11.20.27 NMAC.

B. If the department determines a person has violated or is violating a requirement or prohibition of [this part] 20.11.20 NMAC, the department may initiate an administrative enforcement action and assess an administrative civil penalty for a past or current violation, or both, as authorized by 74-2-12.A.(1) NMSA. As also authorized by [74-2-12.NMSA] 74-2-12.A(2) NMSA and 74-2-12.1 NMSA, the department may commence a civil action in New Mexico district court for appropriate relief, including a temporary or permanent injunction. In addition, as authorized by 74-2-14 NMSA, the department also may commence or cause a criminal action to be commenced. [Violation of a fugitive dust control permit or fugitive dust control plan approved by the department is a violation of this part.]

C. As authorized by [74-2-12.NMSA] 74-2-12.H NMSA, in connection with an administrative enforcement action, the Director may issue subpoenas for attendance and testimony of witnesses and the production of relevant papers, books and documents and may adopt rules for discovery procedures.

D. If a person (requestor) asks the department for an informal review meeting to consider the department’s decision regarding an administrative compliance order in the manner provided by 20.11.20.27 NMAC, the process shall not extend the 30-day deadline for submitting a written request to the department director requesting a public hearing as provided by 74-2-12.C NMSA. If a person receives [a notice of a proposed] an administrative [enforcement action] compliance order from the [division] department, that person (“requestor”) may request an informal review meeting to discuss the [division’s proposed] administrative [enforcement action] compliance order. The request shall be in writing or on a form provided by the [division] department. [Within five working days after the requestor has received the proposed administrative enforcement action,] The requestor shall deliver the written request for an informal review meeting to the director and [the] a division manager within five business days after the requestor has received the administrative compliance order. Within five [working] business days of receiving the request, [the] a division manager or designee shall hold an informal review meeting with the requestor and a division representative (e.g. division manager, compliance officer, or person issuing the [action] order) in an attempt to resolve the administrative [enforcement action] compliance order. Within two [working] business days after the informal review meeting, [the] a division representative shall [issue a] mail, hand deliver or deliver by facsimile a statement to the requestor with the department’s final decision regarding the [action] administrative compliance order and the reasons for the decision. If the requestor is adversely affected by the final decision made by the [division representative] department, the requestor may follow the procedures described in [the following] Subsection E of 20.11.20.27 NMAC.

E. A person who receives [a proposed] an administrative [enforcement action] compliance order and chooses not to sign the compliance [agreement] order or similar document [proposed] as requested by the [division] department, and comply with its terms, may request a hearing consistent with [74-2-9.NMSA] 74-2-9.A NMSA. The decision following the hearing may be appealed consistent with [74-2-9.NMSA], 74-2-9.A NMSA.
F. Payment of an administrative civil penalty [authorized by this part] shall not prevent the department from taking additional enforcement actions, [including suspension or revocation of a permit] if the violation is repeated or an additional violation occurs. Payment of an administrative civil penalty for a prior or [another] additional violation shall not be a defense to [any additional] a subsequent action taken by the department to resolve an additional violation. Actions by the department may include suspension or revocation of a permit, as provided by [22-2-12 NMSA] 74-2-12.B NMSA, and issuance of a stop work order.

G. [The department may issue a stop work order, which shall be effective 24 hours after the person, permittee, owner, operator, or responsible person or official named in a valid permit receives the stop work order, unless an earlier deadline for stopping work or other activities is imposed by the department for good reason. The stop work order shall remain in effect until the person, permittee, owner, operator, or responsible person or official named in a valid permit demonstrates to the satisfaction of the department that the property and activities of the person, permittee, owner, operator or responsible person or official named in a valid permit shall comply with the provisions of this part.] The permittee or responsible person as identified in the permit shall take all actions required by the permit to prevent a violation of 20.11.20 NMAC, including stopping active operations, if necessary. If the permittee or responsible person as identified in the permit fails to take all required actions, the owner or operator, if different, shall take all actions required to prevent or satisfactorily resolve a violation of 20.11.20 NMAC, including stopping active operations, if necessary.

H. The department may issue a stop work order, which shall suspend all active operations except for the required application of reasonably available control measures. The department also may revoke a permit issued by the department if the permittee fails to implement the reasonably available control measures required by the fugitive dust control permit.

I. If a person fails to obtain a permit as required by 20.11.20 NMAC, the department may issue a stop work order which shall require all active operations at a site to stop except for application of reasonably available control measures.

J. The stop work order, which shall be effective 24 hours after the person, permittee, owner, operator, or responsible person named in a permit receives the stop work order, unless an earlier deadline for stopping work or other activities is imposed by the department for good reason. The stop work order shall remain in effect until the person, permittee, owner, operator, or responsible person named in the permit demonstrates to the satisfaction of the department that the activities of the person, permittee, owner, operator or responsible person named in the permit comply with the provisions of 20.11.20 NMAC.

20.11.20.28 PUBLIC OUTREACH AND TRAINING: [The department shall provide or approve public education regarding reducing fugitive dust, and the department shall implement a program to provide training at no cost to individuals who are or may in the future be required to comply with provisions of this part. Approximately twice per year, the department shall provide or approve training workshops on fugitive dust and its control to persons who conduct or participate in projects involving active operations or any other interested person. When a person attends the training and successfully passes a test, the department or approved trainer shall certify that the person has successfully completed the training and provide documentation that the person is certified. Certifications shall be valid for two years.]

A. The department shall provide or approve public education regarding reducing fugitive dust. The department shall maintain an electronic information system using the Internet in order to provide access to the general public and regulated business community regarding fugitive dust control programs, activities, regulations, regulatory requirements, forms and information.

B. The department shall implement a program to provide training at no cost to individuals who are or may be required to comply with provisions of 20.11.20 NMAC. Approximately twice per year, the department shall provide or approve training workshops on fugitive dust and its control to persons who conduct or participate in projects involving active operations and to other interested persons. When a person attends the training and successfully passes a test, the department or approved trainer shall issue a certificate stating that the person has successfully completed the training.
