

# APD update 16-03

January 27, 2023

Currently when similar situation described in the recommendation present themselves, APD is fortunate to have Albuquerque Fire Rescue on scene shortly before or just after arrival.

Albuquerque Fire Rescue comes not only equipped, but also trained to use the appropriate tools for any extrication needs. Often when APD is also present, the officer will take on the role of life saving measures first, then once more equipped personnel arrive (AFR), APD will take on the role of scene safety, Scene safety would included ensuring the safety of other first responders on scene, bystanders and traffic control. APD officers will also take on a role of preserving the scene for potential further investigation.
