

APD update 22-04

January 27, 2023

Currently when similar situations described in the recommendation present themselves, APD is fortunate to have Albuquerque fire Rescue on scene shortly before or just after arrival.

Albuquerque Fire Rescue comes not only equipped, but also trained to use the appropriate tools for any extrication needs. Often when APD is also present, the officer will take on the role of life savings measures first, then once more equipped personnel arrive (AFR), APD will take on the role of scene safety. Scene safety would include ensuring the safety of other first responders on scene., bystanders and traffic control. APD officers will also take on a role of p preserving the scene for potential further investigation.

Denied

Given the above update it is believed the recommendation is a positive one, however with the personnel available who are equipped with proper tools, this will be denied at this time.
