RESOLUTION

FOR AN AREA OF APPROXIMATELY 519 ACRES AND BORDERED
GENERALLY BY ST. CYR ON THE NORTH, COLUMBIA AND GIRARD ON THE
EAST, GIBSON ON THE SOUTH, AND UNIVERSITY ON THE WEST; ADOPTING
THE 2008 SOUTH YALE SECTOR DEVELOPMENT PLAN (ATTACHMENT A) AS
A RANK 3 PLAN; CHANGING EXISTING ZONING FROM R-1, R-T, R-G, R-2, R-3,
C-1, C-2, O-1, P-R, SU-1/TRANSIT FACILITY, SU-1/COMMUNITY CENTER AND
PARK, SU-1/ TENNIS COURT, SU-1/TRAILER COURT, SU-1/HOUSING OFFICE,
SU-1/PRD, SU-1 PRD AND C-2 PERMISSIVE USES WITH EXCLUSIONS, SU-
1/PRD & COMMERCIAL (20000 SQ. FT.) & SELF-SERVE STORAGE FACILITY,
SU-1/PRD 600 DU MAX TO SU-1/CHURCH, YALE CORRIDOR COMMERCIAL
(YCC), RESIDENTIAL MULTI-FAMILY (RMF 1 and RMF 2), NEIGHBORHOOD
AND MIXED USE (NMX), PLANNED NEIGHBORHOOD RESIDENTIAL (PNR).

WHEREAS, on March 20, 2006, the City Council enacted R-06-53 which
called for the creation of a Sector Development Plan for the area
encompassing what is now referred to as the South Yale Sector Development
Plan ("SYSDP" or the "Plan"). That same resolution imposed a moratorium on
certain development approvals pending the development of interim design
regulations. Finally, that resolution funded the development of the Plan and
the interim design regulations; and

WHEREAS, the SYSDP area is approximately 519 acres and bordered
generally by St. Cyr on the north, Columbia and Girard on the east, Gibson on
the south, and University on the west (as shown in Attachment B); and

WHEREAS, on June 19, 2006 the City Council enacted R-06-81 that adopted
interim design regulations pending the completion of the SYSDP and
prohibited certain development approvals in the area if the interim design
standards were not met and the Council has subsequently extended the
effective period for R-06-81 and amended the interim design regulations; and
WHEREAS, the City contracted with the professional planning firm Strata
Design to produce the SYSDP; and
WHEREAS, there were five public meetings for this Plan prior to the
Environmental Planning Commission's consideration of the Plan. One of those
meetings was an all-day design workshop (July 2007) where the community
formulated the desired Goals for the Plan; and
WHEREAS, the community-formulated Goals for the Plan area are to:
1. Develop South Yale into a retail/commercial destination with local
   identity to serve local needs.
2. Develop South Yale into an enjoyable entertainment and
   hospitality destination, which is an inviting, comfortable and easy to use
   environment for tourists and sports enthusiasts as well as residents.
3. Develop South Yale as a healthy neighborhood, which is safe,
   clean, and walkable with a vibrant mixed-use economic area that promotes
   community ownership.
4. Develop South Yale with a public setting that reflects New Mexico,
   is family friendly, and an easy and attractive place to conduct business for all
   populations; and
WHEREAS, an economic study was performed by Bob Gibbs and
Associates which gave insight to the economic picture for the area and guided
the development of the SYSDP; and
WHEREAS, the SYSDP uses a form-based approach and creates five new
zones. These zones regulate land uses, building form and articulation, lot
layout, parking, and landscaping. The new zones are applied so as to achieve
the community's goals; and
WHEREAS, there are a few large parcels within the Plan area that are not
within the City's zoning jurisdiction. These parcels are owned by the
institutions of the University of New Mexico (UNM), Central New Mexico
Community College (CNM) and Albuquerque Public Schools (APS). Since
these lands surround Yale Boulevard, they are still considered part of the Plan
area. While there are no formal agreements with any of these entities,
representatives from each institution have supported the Plan's development; and

WHEREAS, the SYSDP's five new zones are the following:

1. Yale Corridor Commercial (YCC), consisting of the existing C-2 zoned properties located along Yale Boulevard from St. Cyr to Ross Avenue. This zone encourages a mixture of uses that include retail, offices, commercial services, residential and civic uses that are intended to create economic and social vitality.

2. Residential Multi-Family (RMF 1), consisting of the existing multi-family residential parcels that are scattered throughout the Clayton Heights residential area. When these properties are redeveloped, form-based code standards will apply to ensure that multi-family redevelopment is sensitive to existing single-family homes.

3. Residential Multi-Family (RMF 2), consisting of the existing multi-family residential parcels that are located on Sunshine Terrace SE and Vail SE. When these properties are redeveloped, form-based code standards will apply to ensure that multi-family redevelopment is sensitive to existing single-family homes.

4. Neighborhood Mixed Use (NMX), consisting of a mix of R-2 and C-2 zoned properties at the southern end of Yale Boulevard and Gibson Avenue extending to the west. The intent of this zone is to encourage integration of residential and commercial uses and increase opportunities for high-quality, mixed-use development.

5. Planned Neighborhood Residential (PNR), consisting of the existing SU-1/PRD parcels that are located within the Plan area. This is a primarily residential zone that allows a mix of uses to support the residential uses and the creation of complete developments.

WHEREAS, the City's Environmental Planning Commission has held two public hearings with respect to the adoption of the SYSDP. The Planning Commission voted 4-4 to recommend approval of the SYSDP to the City Council and, thus, sent the SYSDP to the City Council without recommendations, findings, or conditions.
BE IT RESOLVED BY THE COUNCIL, THE GOVERNING BODY OF THE CITY OF
ALBUQUERQUE:

SECTION 1. The City Council makes the following findings:

1. The SYSDP is within the area designated Established Urban by the
   Comprehensive Plan. The sector plan is in compliance with the applicable
   land use goal and policies for Established Urban Areas as follows:
   A. The SYSDP area contains a variety of zones that allow for both
      residential and commercial uses. These zone categories support overall
      gross densities of up to 5 du/acre (policy a).
   B. The new zones of the SYSDP are tailored to promote economic
      vitality and stable land uses while respecting the existing neighborhood
      values, natural environmental conditions and carrying capacities, scenic
      resources, and resources of other social, cultural, recreational concern (policy
      d).
   C. The SYSDP area accommodates new growth through
      development in areas where vacant land is contiguous to existing or
      programmed urban facilities and services and where the integrity of existing
      neighborhoods can be ensured (policy e).
   D. The YCC and NMX zones, which allow for employment and
      service uses, are located to complement residential areas and sited to
      minimize adverse effects of noise, lighting, pollution, and traffic on existing
      residential environment (policy i).
   E. The YCC and NMX zones, which encourage commercial
      development, are located along the Yale corridor, which provides pedestrian
      and bicycle access and is within reasonable distance of residential areas for
      walking or bicycling (policy j).
   F. The proposed design standards for the five new zones
      encourage quality and innovation in design that is appropriate to the Plan area
      (policy l).

2. The SYSDP is in compliance with the goal and policies of the Activity
   Centers section of the Land Use component of the Comprehensive Plan.
   These are met as follows:
A. There are three designated Activity Centers in and adjacent to the SYSDP area – the Albuquerque International Sunport (Major), the CNM (Major), and the UNM South Sports Complex (Community). These Activity Centers are intended to help shape the built environment in a sustainable development pattern, create mixed use concentrations of interrelated activities that promote transit and pedestrian access both to and within the Activity Center, and maximize cost-effectiveness of City services (policy a).

B. The new zones support the creation of multi-use Activity Centers and will promote ongoing public/private cooperation necessary for private market conditions that support the development and functioning of Activity Centers (policy j).

3. The SYSDP is in compliance with the goal and policies of the Air Quality portion of the Environmental Protection and Heritage Conservation section of the Comprehensive Plan.

A. The SYSDP encourages a balanced land use/transportation system that promotes the efficient placement of housing, employment and services, thus reducing automobile travel's adverse effects on air quality (policy b).

B. The SYSDP calls for the employment of traffic engineering techniques that are intended to achieve smooth traffic flow at steady, moderate speeds (policy c).

C. The SYSDP promotes a balanced circulation system that encourages mass transit use and alternative means of transportation while providing sufficient roadway capacity to meet mobility and access needs (policy d).

4. The SYSDP is in compliance with the goal and policies of the Developed Landscape portion of the Environmental Protection and Heritage Conservation section of the Comprehensive Plan. These are met as follows:

A. The SYSDP respects the natural and visual environment, particularly features unique to Albuquerque, as a significant determinant in development decisions. West of Yale Boulevard and west of the single-family homes of Clayton Heights, west of Buena Vista Avenue, the grade drops approximately 30 feet. This natural ‘bench’ provides for some of the greatest
views of the Rio Grande River Valley looking west. The Plan does not alter
this grade change and has taken it into account when determining the
placement of the NMX zone on the southwest portion of the Plan area (policy
a).

B. The SYSDP encourages landscaping and streetscape
standards within the public and private rights-of-way to control water erosion
and dust and to create a pleasing visual environment (policy d).

5. The SYSDP is in compliance with the goal and policies of the
Community Identity and Urban Design portion of the Environmental Protection
and Heritage Conservation component of the Comprehensive Plan. These are
met as follows:

A. The SYSDP relates land uses so as to effectively encourage
walking trips from one destination to another within the SYSDP area and
promotes pedestrian connectivity through its design standards for each of the
zones and the General Standards, section 5 in chapter 3. The permissible
Building and Frontage Types contained in the SYSDP are designed to be
appropriate to the community and support public transit and pedestrian
activity. Landscaping, street furniture, textured pavement for pedestrians, and
other improvements to the public realm are also an integral part of the SYSDP
(policy d).

B. Roadway corridors within the SYSDP area and that connect the
community’s Activity Centers are designed to reinforce the community’s
unique identity, and streetscape improvements are designed to facilitate
walking safety and convenience and provide shade to and comfort for
pedestrians (policy e).

6. The SYSDP is in compliance with the goal and policies of the
Transportation and Transit section of the Community Resource Management
component of the Comprehensive Plan. These are met as follows:

A. The SYSDP provides the elements to redevelop Yale Boulevard
into a corridor that is consistent with the Comprehensive Plan’s objectives of
street design as presented in this goal. The tailored zone of YCC allows for
transportation and transit to co-exist along with pedestrian and bicycle modes
of transportation (policy a).
B. The SYSDP supports reducing the frequency of curb cuts along certain sections of Yale Blvd. in order to promote increased pedestrian accessibility (policy d).

C. The SYSDP identifies and promotes opportunities to enhance pedestrian facilities for integration into developments to create safe and pleasant non-motorized travel conditions (policy g).

D. The SYSDP identifies and prioritizes transportation investments that emphasize overall mobility needs and choice among modes in the movement of people (policy q).

7. The SYSDP is in compliance with the goal and policies of the Economic Development portion of the Resource Management component of the Comprehensive Plan. These are met as follows:

A. The SYSDP encourages new employment opportunities in the SYSDP area by preserving and emphasizing commercial development opportunities, especially in the Yale Blvd. Corridor. The allowance of residential use above the commercial space on the ground floor in the YCC zone, as well as a focus on improving transit service to and in the SYSDP area, will result in local residents being able to access places of employment more easily and will serve to encourage employers to hire local residents and diversify their employment base. The proximity to the Sunport and the UNM research area also encourages companies to locate within the SYSDP area (policy a).

B. The Sunport is located directly south of the SYSDP area and is the destination for both residents and regional, national, and international visitors. UNM’s sports complex is also within the SYSDP’s area and draws many visitors to sporting events. The University of New Mexico’s main campus is also located further north on Yale Boulevard. All of these attractions promote tourism in the SYSDP area (policy d).

SECTION 2. The City Council makes the following findings as to compliance with R-270-1980 for the zone changes with respect to each of the five new zones:

1. The SYSDP contains zoning and design regulations that will promote the health, safety, morals and general welfare of the City.
2. The SYSDP establishes zoning that increases flexibility of allowable uses, promotes more development in the area, and standardizes building types and placement, all of which will promote more stability and sustainability of the area.

3. The SYSDP is in compliance with applicable goals and policies of the Comprehensive Plan as set out above.

4. The proposed zoning in the SYSDP is more advantageous to the community and to the city as a whole because it will allow mixed-use concentrations of interrelated activities that promote transit and pedestrian access both to and within the SYSDP area. Chapter Two of the SYSDP identifies specific Goals and Objectives that were developed by the community during a year-long public planning process and, when implemented, are intended to increase economic development opportunities, support revitalization efforts, and achieve the community’s vision for itself. The five new zones in the SYSDP are essential vehicles for achieving the specific Design and Policy Objectives that are to be used to implement the Goals. As described below, each of the new zones is designed to support and help carry out the Goals and Objectives of the SYSDP:

   A. YCC: The Yale Corridor Commercial zone accommodates the development of business and housing to service neighborhood and community needs. Using a form-based approach promotes development of this corridor as a pedestrian-oriented, mixed-use, transit corridor. Allowable land uses are not generally altered but, in fact, expanded in order to achieve the more urban, mixed-use setting that the community within and surrounding the SYSDP area desires. The expanded allowable uses provide greater flexibility in developing or redeveloping property and, in turn, will encourage development or redevelopment of vacant and underutilized property to occur. Development outcomes are more predictable for property owners, residents, and the City because of the design standards and regulations contained in this zone.

   The YCC zone furthers the following applicable goals and policies of the Comprehensive Plan:
II.B.5 Land Use – Developing and Established Urban Areas

Goal

- The YCC zone allows for both residential and commercial uses and supports overall gross densities of up to 5 du/acre (policy a).

- The YCC zone is tailored to promote economic vitality and stable land uses while respecting the existing neighborhood values, natural environmental conditions and carrying capacities, scenic resources, and resources of other social, cultural, recreational concern (policy d).

- The YCC zone accommodates new growth through development in areas where vacant land is contiguous to existing or programmed urban facilities and services and where the integrity of existing neighborhoods can be ensured (policy e).

- The YCC zone, which allows for employment and service uses, is located to complement residential areas and sited to minimize adverse effects of noise, lighting, pollution, and traffic on existing residential environment (policy i).

- The YCC zone, which encourages commercial development, is located along the Yale corridor, which provides pedestrian and bicycle access and is within reasonable distance of residential areas for walking or bicycling (policy j).

- The proposed design standards for the YCC zone encourage quality and innovation in design that is appropriate to the SYSDP area (II.B.5, policy l).

- The YCC zone encourages the redevelopment and rehabilitation of older neighborhoods (Clayton Heights and Victory Hills) in the Established Urban Area (policy o).

II.B.7 Land Use – Activity Centers Goal

- The YCC zone supports the creation of multi-use Activity Centers and will promote ongoing public/private cooperation necessary for private market conditions that support the development and functioning of Activity Centers (policy j).
**II.C.1 Environmental Protection and Heritage Conservation – Air Quality Goal**

- The YCC zone encourages a balanced land use/transportation system that promotes the efficient placement of housing, employment and services, thus reducing automobile travel’s adverse effects on air quality (policy b).

**II.C.8 Environmental Protection and Heritage Conservation – Developed Landscape Goal**

- The YCC zone respects the natural and visual environment, particularly features unique to Albuquerque, as a significant determinant in development decisions (policy a).

- The YCC zone encourages landscaping and streetscape standards within the public and private rights-of-way to control water erosion and dust and create a pleasing visual environment (policy d).

**II.C.9 Environmental Protection and Heritage Conservation – Community Identity and Urban Design Goal:** The Goal is to preserve and enhance the natural and built characteristics, social, cultural and historical features that identify Albuquerque and Bernalillo County sub-areas as distinct communities and collections of neighborhoods.

- The YCC zone relates land uses so as to effectively encourage walking trips from one destination to another within the SYSDP area and promotes pedestrian connectivity through its design standards (policy d).

**II.D.4 Community Resource Management – Transportation and Transit Goal**

- The YCC zone supports reducing the frequency of curb cuts along certain sections of Yale Blvd. in order to promote increased pedestrian accessibility (policy d).

- The YCC zone identifies and promotes opportunities to enhance pedestrian facilities for integration into developments to create safe and pleasant non-motorized travel conditions (policy g).

**II.D.6 Community Resource Management – Economic Development Goal**
The YCC zone encourages new employment opportunities in the SYSDP area by preserving and emphasizing commercial development opportunities. The allowance of residential above the commercial space on the ground floor in the YCC zone, as well as a focus on improving transit service to and in the SYSDP area, will result in local residents being able to access places of employment more easily and serve to encourage employers to hire local residents and diversify their employment base. The proximity to the Sunport and the UNM research area also encourages companies to locate within the SYSDP area (policy a).

The YCC zone helps achieve the following Goals and Objectives of the SYSDP:

- Goal 2.1 Develop South Yale into a retail/commercial destination with local identity to serve local needs:
  - Objective 1. Encourage more density to increase commercial services. (*Existing C-2 zoning does not allow or encourage the development of residential uses to help support commercial activity. The YCC zone is tailored to meet this need.*)
  - Objective 2. Allow mixed use, but ensure that commercial development is a priority. (*Existing C-2 zoning has not produced commercial development and activity to support the neighborhood and broader community. The YCC mixed-use zoning is needed to bring more residents to the area to create the market demand for commercial services while preserving commercial development opportunities.*)
  - Objective 3. Ensure development expresses South Yale as a unique area (utilize common urban design elements in the streetscape). (*Existing zoning pertains only to individual parcels; it fails to consider the larger development context and the Yale corridor as an entire entity. The YCC zone seeks to create an active and consistent streetscape through block organization, which is intended to manage the overall character of the block while permitting the greatest amount of design flexibility at the lot level.*)
  - Objective 4. Maintain some westerly views by providing variation in building heights, framing views along side streets. (*Existing zoning pertains only to individual parcels; it fails to consider the larger*
development context and the Yale corridor as an entire entity. The YCC zone addresses the Yale corridor as a whole and requires variation in building heights and types, thus creating the urban environment desired by the community. A key characteristic of the YCC zone is that building heights are required to be varied along each block to protect views and provide visual interest.)

- Goal 2.2 Develop South Yale into an enjoyable entertainment and hospitality destination which is an inviting, comfortable, and easy-to-use environment for tourists and sports enthusiasts as well as residents:
  - Objective 4. Provide a pedestrian friendly environment. (Existing zoning encourages buildings to be placed back from the sidewalk with parking consuming large areas of street frontage and drivepads interrupting sidewalk connectivity, creating an unsafe and unwelcoming environment for pedestrians. The YCC zone places parking at the rear of buildings and encourages parking to be accessed from the rear so as to eliminate potential conflicts between vehicles and pedestrians on the street side of the property.)

- Goal 2.3 Develop South Yale as a healthy neighborhood which is safe, clean, and walkable with a vibrant mixed-use economic area that promotes community ownership:
  - Objective 1. Limit development of stand alone apartment buildings along the Yale corridor by requiring mixed-use. (Recent zone change requests along the Yale corridor have resulted in the loss of commercially zoned land to exclusively residential projects. In the YCC zone, residential uses are not permitted on the ground level, which will result in required mixed-use developments.)
  - Objective 2. Encourage community and pride of ownership through high quality development. (Existing zoning fails to address design standards for development. The YCC zone seeks to create a high quality urban built environment through design regulations but still provides a high level of design flexibility.)
Goal 2.4 Develop South Yale with a public setting that reflects New Mexico, is family friendly, and is an easy and attractive place to conduct business for all populations:

- Objective 4. Ensure variety in building shapes and sizes. *(Existing zoning does not provide predictability or guidelines to ensure variety in building shapes and sizes. The YCC zone regulates building shapes and sizes by limiting the number of building types per block so as to ensure variety but allow flexibility.)*

- Objective 5. Reduce conflicts between pedestrians and vehicles. *(Existing zoning is not adequate to address this objective as it allows and promotes vehicular activity in the pedestrian realm. The YCC zone restricts vehicular activity in the pedestrian realm by requiring that parking be accessed from the rear of the property and limiting street-side access where rear access does not exist.)*

- Objective 7. Create spaces that engage social interaction and commercial activity. *(Existing zoning is not adequate to address this objective. The YCC zone regulates building placement, frontage types, and the location of parking in order to create a continuous street frontage to encourage pedestrian and commercial activity.)*

B. RMF 1: The Residential Multifamily zone is intended to provide consistent guidelines for multi-family housing that are sensitive to adjacent single-family homes. Permissive uses under existing zoning (R-2, R-T, R-3, R-G and four corner lots zoned R-1) will not be restricted, and in some cases will be expanded, under the RMF 1 zone. The RMF 1 zone is more advantageous to the community because the design regulations for the RMF 1 zone, such as building placement, building frontage, and location of parking, ensure that more intense residential zoning complements adjacent R-1 single-family housing and reflects the scale of the existing neighborhood; existing zoning does not regulate these design-related issues, which can result in development that is out of context with and harmful to existing single-family residential homes.

The RMF 1 zone furthers the following applicable goals and policies of the Comprehensive Plan:
• II.B.5 Land Use – Developing and Established Urban Areas

  Goal

  o The RMF 1 zone supports overall gross densities of up to 5 du/acre (policy a).

  o The RMF 1 zone is tailored to promote stable land uses while respecting the existing neighborhood values, natural environmental conditions and carrying capacities, scenic resources, and resources of other social, cultural, recreational concern (policy d).

  o The RMF 1 zone encourages housing to be oriented towards pedestrians (policy f).

  o The proposed design standards for the RMF 1 zone encourage quality and innovation in design that is appropriate to the SYSDP area (policy l).

  o The RMF 1 zone encourages the redevelopment and rehabilitation of older neighborhoods (Clayton Heights) in the Established Urban Area (policy o).

• II.C.9 Environmental Protection and Heritage Conservation – Community Identity and Urban Design Goal

  o The RMF 1 zone relates land uses so as to effectively encourage walking trips from one destination to another within the SYSDP area and promotes pedestrian connectivity through its design standards (policy d).

  The RMF 1 zone helps achieve the following Goals and Objectives of the SYSDP:

  • Goal 2.1 Develop South Yale into a retail/commercial destination with local identity to serve local needs:

  o Objective 1. Encourage more density to increase commercial services. (Existing zoning limits a property owner's ability to more fully build out their property because of off-street parking requirements. The RMF 1 zone reduces the off-street parking requirement and increases the maximum building height from 26' to 30'; these modifications allow for increased density to be achieved through the RMF 1 zone.)
Objective 3. Ensure development expresses South Yale as a unique area (utilize common urban design elements in the streetscape). (Existing zoning does not address the relationship of buildings to the street or to adjacent R-1 zoned land. The RMF 1 zone orients buildings to the street by regulating building and parking placement and establishes design standards to create consistency in urban development patterns.)

Goal 2.3 Develop South Yale as a healthy neighborhood which is safe, clean, and walkable with a vibrant mixed-use economic area that promotes community ownership:

Objective 2. Encourage community and pride of ownership through high quality development. (Existing zoning fails to address design standards for development. The RMF 1 zone seeks to create a high quality urban built environment through design regulations but still provides a high level of design flexibility.)

C. RMF 2: The Residential Multifamily 2 zone is intended to provide consistent guidelines for multi-family housing that are sensitive to adjacent single-family homes. Permissive uses under existing zoning (R-2 and R-3) will not be restricted, and in some cases will be expanded, under the RMF 2 zone. The RMF 2 zone is more advantageous to the community because the design regulations for the RMF 2 zone, such as building placement, building frontage, and location of parking, ensure that more intense residential zoning complements single-family uses while allowing a scale and intensity appropriate to its location along University Boulevard; existing zoning does not regulate these design-related issues, which can result in development that is out of context with and harmful to existing single-family residential homes.

The RMF 2 zone further the following applicable goals and policies of the Comprehensive Plan:

- II.B.5 Land Use – Developing and Established Urban Areas

Goal

- The RMF 2 zone supports overall gross densities of up to 5 du/acre (policy a).
o The RMF 2 zone is tailored to promote stable land uses while respecting the existing neighborhood values, natural environmental conditions and carrying capacities, scenic resources, and resources of other social, cultural, recreational concern (policy d).

  o The RMF 2 zone encourages housing to be oriented towards pedestrians (policy f).

  o The proposed design standards for the RMF 2 zone encourage quality and innovation in design that is appropriate to the SYSDP area (policy l).

  o The RMF 2 zone encourages the redevelopment and rehabilitation of older neighborhoods (Clayton Heights) in the Established Urban Area (policy o).

  **II.C.9 Environmental Protection and Heritage Conservation – Community Identity and Urban Design Goal**

  o The RMF 2 zone relates land uses so as to effectively encourage walking trips from one destination to another within the SYSDP area and promotes pedestrian connectivity through its design standards (policy d).

The RMF 2 zone helps achieve the following Goals and Objectives of the SYSDP:

  * Goal 2.1 Develop South Yale into a retail/commercial destination with local identity to serve local needs:
    
    o Objective 1. Encourage more density to increase commercial services. *(Existing zoning limits a property owner’s ability to more fully build out their property because of off-street parking requirements. The RMF2 zone reduces the off-street parking requirement and increases the maximum building height from 26’ to 30’; these modifications allow for increased density to be achieved through the RMF2 zone.)*

    o Objective 3. Ensure development expresses South Yale as a unique area (utilize common urban design elements in the streetscape). *(Existing zoning does not address the relationship of buildings to the street or to adjacent R-1 zoned land. The RMF2 zone orients buildings to the street by*
regulating building and parking placement and establishes design standards to create consistency in urban development patterns.)

- Goal 2.3 Develop South Yale as a healthy neighborhood which is safe, clean, and walkable with a vibrant mixed-use economic area that promotes community ownership:

Objective 2. Encourage community and pride of ownership through high quality development. *(Existing zoning fails to address design standards for development. The RMF 2 zone seeks to create a high quality urban built environment through design regulations but still provides a high level of design flexibility.)*

D. NMX: The Neighborhood Mixed Use zone is applied to parcels of land with a mix of R-2 and C-2 existing zoning, located south of Ross between Buena Vista Dr. and Yale Blvd. The goal of the NMX zone is to encourage integration of residential and commercial uses and to connect this area to the larger South Yale community. The NMX zone expands permissive uses for all properties within this zone and is more advantageous to the community because property owners have more flexibility in tailoring development to meet the needs of the community through permissive mixed-use zoning.

The NMX zone furthers the following applicable goals and policies of the Comprehensive Plan:

- II.B.5 Land Use – Developing and Established Urban Areas Goal

  - The NMX zone allows for both residential and commercial uses and supports overall gross densities of up to 5 du/acre (policy a).

  - The NMX zone is tailored to promote economic vitality and stable land uses while respecting the existing neighborhood values, natural environmental conditions and carrying capacities, scenic resources, and resources of other social, cultural, recreational concern (policy d).

  - The NMX zone accommodates new growth through development in areas where vacant land is contiguous to existing or
programmed urban facilities and services and where the integrity of existing neighborhoods can be ensured (policy e).

- The NMX zone, which allows for employment and service uses, is located to complement residential areas and sited to minimize adverse effects of noise, lighting, pollution, and traffic on existing residential environment (policy i).

- The NMX zone provides pedestrian and bicycle access and is within reasonable distance of residential areas for walking or bicycling (policy j).

- The proposed design standards for the NMX zone encourage quality and innovation in design that is appropriate to the SYSDP area (policy l).

- The NMX zone encourages the redevelopment and rehabilitation of older neighborhoods (Clayton Heights) in the Established Urban Area (policy o).

- **II.B.7 Land Use – Activity Centers Goal**

- The NMX supports the creation of multi-use Activity Centers and will promote ongoing public/private cooperation necessary for private market conditions that support the development and functioning of Activity Centers (policy j).

- **II.C.1 Environmental Protection and Heritage Conservation – Air Quality Goal**

- The NMX zone encourages a balanced land use/transportation system that promotes the efficient placement of housing, employment and services, thus reducing automobile travel's adverse effects on air quality (policy b).

- **II.C.8 Environmental Protection and Heritage Conservation – Developed Landscape Goal**

- The NMX zone respects the natural and visual environment, particularly features unique to Albuquerque, as a significant determinant in development decisions (policy a).
1. The NMX zone encourages landscaping and streetscape standards within the public and private rights-of-way to control water erosion and dust and create a pleasing visual environment (policy d).

- II.C.9 Environmental Protection and Heritage Conservation – Community Identity and Urban Design Goal

  - The NMX zone relates land uses so as to effectively encourage walking trips from one destination to another within the SYSDP area and promotes pedestrian connectivity through its design standards (policy d).

- II.D.4 Community Resource Management – Transportation and Transit Goal

  - The NMX zone identifies and promotes opportunities to enhance pedestrian facilities for integration into developments to create safe and pleasant non-motorized travel conditions (policy g).

- II.D.6 Community Resource Management – Economic Development Goal

  - The NMX zone encourages new employment opportunities in the SYSDP area by preserving, expanding, and emphasizing commercial development opportunities. The allowance of residential above the commercial space on the ground floor in the NMX zone, as well as a focus on improving transit service to and in the SYSDP area, will result in local residents being able to access places of employment more easily and serve to encourage employers to hire local residents and diversify their employment base. The proximity to the Sunport and the UNM research area also encourages companies to locate within the SYSDP area (policy a).

The NMX zone helps achieve the following Goals and Objectives of the SYSDP:

- Goal 2.1 Develop South Yale into a retail/commercial destination with local identity to serve local needs:
  
  - Objective 1. Encourage more density to increase commercial services. *(Existing C-2 on Yale Blvd. zoning does not allow or encourage the development of residential uses to help support commercial*
The NMX zone is tailored to meet this need by introducing R-2 permissive uses.)

- Objective 2. Allow mixed use, but ensure that commercial development is a priority. (The NMX zone expands permissive commercial uses to more properties and provides opportunities for both more commercial development and the residential development needed to create the market demand to bring commercial services to the area.)

- Objective 3. Ensure development expresses South Yale as a unique area (utilize common urban design elements in the streetscape). (The existing R-2 and C-2 zoning fails to provide a cohesive development context for the area. The NMX zone seeks to create an active and consistent streetscape and development pattern that integrates with the rest of the area by regulating building placement, frontage types, and the location of parking.)

- Goal 2.3 Develop South Yale as a healthy neighborhood which is safe, clean, and walkable with a vibrant mixed-use economic area that promotes community ownership:

- Objective 1. Limit development of stand alone apartment buildings along the Yale corridor by requiring mixed-use. (Existing R-2 zoning limits developments to exclusively residential use. The NMX zone encourages mixed-use development, though it does not prohibit developments that are exclusively residential as the YCC zone does.)

- Objective 2. Encourage community and pride of ownership through high quality development. (Existing zoning fails to address design standards for development. The NMX zone seeks to create a high quality urban built environment through design regulations but still provides a high level of design flexibility.)

- Goal 2.4 Develop South Yale with a public setting that reflects New Mexico, is family friendly, and is an easy and attractive place to conduct business for all populations:

- Objective 4. Ensure variety in building shapes and sizes. (Existing zoning does not provide predictability or guidelines to ensure variety in building shapes and sizes. The NMX zone contains a wide variety of
permitt building types and frontage types that can be employed to meet the
needs of diverse developments.)

- Objective 7. Create spaces that engage social
interaction and commercial activity. (Existing zoning is not adequate to
address this objective. The NMX zone regulates building placement, frontage
types, and the location of parking in order to create a continuous street
frontage to encourage pedestrian and commercial activity.)

E. PNR: The Planned Neighborhood Residential zone identifies
large land parcels that represent a future opportunity for the creation of
mixed-use neighborhoods that increase pedestrian activity and social
interaction in an identifiable and interconnected way. Key characteristics of
the PNR zone include buildings oriented to the street, on-street parking,
outdoor gathering spaces and public open space, higher density residential,
parking located behind buildings and accessed via alleys, and efficient and
effective circulation patterns for streets and pedestrian pathways.

The PNR zone furthers the following applicable goals and policies
of the Comprehensive Plan:

- II.B.5 Land Use – Developing and Established Urban Areas

Goal

- The PNR zone supports overall gross densities of up to
5 du/acre (policy a).

- The PNR zone is tailored to promote stable land uses
while respecting the existing neighborhood values, natural environmental
conditions and carrying capacities, scenic resources, and resources of other
social, cultural, recreational concern (policy d).

- The PNR zone encourages clustering of homes to
provide larger shared open spaces and houses oriented towards pedestrians
and bikeways (policy f).

- The proposed design standards for the PNR zone
encourage quality and innovation in design that is appropriate to the SYSDP
area (policy l).
The PNR zone encourages the redevelopment and rehabilitation of older neighborhoods (Clayton Heights) in the Established Urban Area (policy o).

- II.C.9 Environmental Protection and Heritage Conservation – Community Identity and Urban Design Goal
  - The PNR zone relates land uses so as to effectively encourage walking trips from one destination to another within the SYSDP area and promotes pedestrian connectivity through its design standards (policy d).

- II.D.4 Community Resource Management – Transportation and Transit Goal
  - The PNR zone identifies and promotes opportunities to enhance pedestrian facilities for integration into developments to create safe and pleasant non-motorized travel conditions (policy g).

The PNR zone helps achieve the following Goals and Objectives of the SYSDP:

- Goal 2.1 Develop South Yale into a retail/commercial destination with local identity to serve local needs.
  - Objective 1. Encourage more density to increase commercial services. *(The PNR zone encourages compact development and provides for a range of levels of development intensity, from single- and multi-family housing to high intensity mixed-use development accommodated in buildings up to five stories in height.)*

- Objective 5. Promote a Park Once/Walk environment. *(Existing zoning does not adequately address the need to guide development that creates a park once/walk environment. The PNR zone’s intent is to create mixed-use neighborhoods that are self-sufficient and provide services in a contained, walkable setting.)*

- Goal 2.3 Develop South Yale as a healthy neighborhood which is safe, clean, and walkable with a vibrant mixed-use economic area that promotes community ownership:
  - Objective 2. Encourage community and pride of ownership through high quality development. *(Existing zoning fails to
address design standards for development. The PNR zone seeks to create a
high quality urban built environment through design regulations but still
provides a high level of design flexibility.)

5. There has been no demonstration that any of the permissive uses in
the five new zones – YCC, RMF 1, RMF 2, NMX, and PNR would be harmful to
adjacent property owners, the neighborhood or the community. The five new
zones provide certainty regarding future development by regulating
permissive uses, building types and frontage types. These regulations assure
compatibility of adjacent uses and prevent harm to adjacent properties.

6. The SYSDP includes a capital improvements list for projects that are
intended to enhance the area. These projects are public investments to be
made to increase the functionality and attractiveness of the area and to spur
private investment in the area. However, the proposed zoning is not tied to the
funding and the City is not bound to provide the capital improvements on any
special schedule.

7. Economic factors were considered in determining the proposed
zones. However, they are not the sole factor for changing zones in the area.

8. Although the new zones in the SYSDP abut major streets, this is not
the sole justification of the mixed-use zones.

9. The new zones do not constitute a “spot” or “strip” zone since the
zones involve more than one premise and one strip of land along a street.

SECTION 3. The South Yale Sector Development Plan, Attachment A hereto
and made a part hereof, is adopted as a Rank Three Plan, as a regulatory
guide to the implementation of the Albuquerque / Bernalillo County
Comprehensive Plan.

SECTION 4. All development and redevelopment activities within the area
shall be guided and regulated by the provisions of the South Yale Sector
Development Plan.

SECTION 5. The Zone Map, adopted by Article 14-16-4-9 ROA 1994, is
hereby amended to reflect the rezoning in the map shown in Attachment B
hereto.

SECTION 6. EFFECTIVE DATE AND PUBLICATION. This legislation shall
take effect five days after publication by title and general summary.
SECTION 7. SEVERABILITY CLAUSE. If any section, paragraph, sentence, clause, word or phrase of this resolution is for any reason held to be invalid or unenforceable by any court of competent jurisdiction, such decision shall not affect the validity of the remaining provisions of this resolution. The Council hereby declares that it would have passed this resolution and each section, paragraph, sentence, clause, word or phrase thereof irrespective of any provisions being declared unconstitutional or otherwise invalid.
PASSED AND ADOPTED THIS 2nd DAY OF February, 2009
BY A VOTE OF: 7 FOR 0 AGAINST.

Excused: Cadigan, Mayer

_South Yale Sector Development Plan_
CHAPTER ONE

Introduction
CHAPTER ONE

Introduction

Figure 1: South Yale Sector Development Plan Area
1.0 Introduction
In mid-2007 the Albuquerque City Council and the City of Albuquerque Planning Department initiated a planning process for the South Yale area in recognition of the area’s unique conditions, constraints and opportunities deserving of special design and policy guidance. The goal of this planning effort was to establish a vision for the South Yale corridor, and surrounding neighborhoods, and to propose technical solutions through zoning changes, development and design guidelines, streetscape improvements and recommendations for public improvements that would implement the community vision.

1.1 Purpose of the Plan
The South Yale Sector Development Plan (“the Plan”) includes approximately 519 acres and generally covers the area north of Gibson Boulevard SE, east of University Boulevard, south of St. Cyr Avenue and generally west of Columbia Drive. The Plan’s boundary includes the Clayton Heights neighborhood on the west side of Yale Boulevard and a portion of the Victory Hills Neighborhood on the east. The area is within close proximity to UNM, Nob Hill, the Ridgecrest Neighborhoods, Downtown and the Albuquerque Sunport. The South Yale corridor is an important transportation route between the Sunport and the University of New Mexico area. Yet despite its strategic location, the area suffers from stagnant commercial development characterized by large areas of land with underutilized commercial zoning.

The purpose of the Plan is to promote and guide development in a manner that supports the area’s economic and social vitality. The Plan recognizes that South Yale Boulevard has considerable development potential as a successful transit corridor and should be improved through the control of adjacent development, and that large areas of land with underutilized commercial zoning offer significant opportunities for quality infill development and redevelopment. By fostering a balanced mix of neighborhood commercial, residential, and public uses, infilling with compact development, and adopting streetscape improvements that create an attractive, safe and comfortable pedestrian environment, the Plan seeks to make the South Yale area an important destination in and of itself, as well as a memorable, unique and attractive gateway into Albuquerque.

1.2 Area Overview
The South Yale area is a vital part of Albuquerque. Yale Boulevard is an established entryway into the City from the Albuquerque Sunport, and for many visitors, it serves as a major transportation route to the University of New Mexico, Nob Hill and the Downtown area. Yale Boulevard is also the designated route for the City’s Modern Streetcar project. Yale Boulevard today is automobile-oriented, yet it has the potential to become more pedestrian and transit-oriented. The scale of the street and parcel sizes, which are comparatively smaller here than on some of the newer, outlying corridors, allows for a potential character of development to emerge which is conducive to pedestrian activity.

The area is also home to Albuquerque’s main sports and entertainment venues, including the UNM football stadium, the City’s Isotopes Park and new Veloport, all of which attract hundreds of thousands of visitors to the area each year. Hotel occupancy rates for the over two thousand hotel rooms within a 1 mile radius is frequently 100 percent. However important the area is today, its full potential is unrealized, with large areas of vacant or underutilized land, streets that seem neglected, and large areas of unimproved parking. The goal of this plan is to develop a framework that addresses technical questions about the area while providing a vision for the future.

1.3 Planning Team
The planning process for the Plan was led by the City of Albuquerque Planning Department with support from District 3 Councilor Isaac Benton. In addition to the Planning Department, the planning team included Strata Design. The Plan-
CHAPTER ONE
Introduction

The Planning Department provided assistance with the facilitation of meetings, gathering information, direction, review and production of the plan. Strata Design evaluated data and developed recommendations for achieving the community’s vision for the area.

1.4 Public Input
Community involvement and input throughout the process was a key component of the overall planning effort. The planning team met with community members multiple times during the process to solicit input, review findings, and confirm recommendations. The process included five public meetings, including a day long visioning workshop. Throughout the process, information on the project was posted on the City’s Planning Department website.

1.5 Planning Process
The year long planning process began in late Spring, 2007. Information about the project was shared with the public at a kick-off meeting in May, 2007. Public input was solicited during a public meeting in July and at an all-day visioning workshop in September to generate initial ideas for land use policy and development, traffic and transportation, and amenities and public space recommendations. In these meetings participants defined and/or commented on physical, cultural and economic issues, assets and opportunities for the Plan area. This input helped to establish a clear vision for the South Yale Area.

A subsequent meeting was held in November 2007 to share and confirm findings from the workshop and build consensus for the regulatory recommendations to be advocated by the Plan. With feedback from City technical staff, the Planning Team then drafted a plan based on the resulting vision and regulatory strategy. The draft document was reviewed by the public in April 2008, and submitted to the Environmental Planning Commission in summer 2008.

1.6 Regulatory Tool
The South Yale Sector Development Plan is a “Rank 3” Plan which provides policy and regulatory guidance for development within its boundaries. Its adoption sets land use, design and development standards for the area to ensure development outcomes that are more predictable for the community and affected stakeholders, and supportive of the community’s goals for the area.
CHAPTER TWO
Goals and Objectives
CHAPTER TWO
Goals and Objectives

1.0 COMMUNITY GOALS AND OBJECTIVES

The community goals were developed during the year-long public planning process. The community was asked to craft statements about their ideal vision of how the South Yale area should develop in the future. From the visioning process, specific goals were generated along with the policy and design objectives necessary for achieving the goals. The visioning goals focused on four development areas: retail/commercial, entertainment/hospitality, healthy neighborhoods and the public realm.

2.0 THE GOALS

2.1 Goal for Retail and Commercial Development

In recognition of the underutilized land along Yale, the community desire for neighborhood commercial services and the significant potential for a new, vibrant mixed-use corridor, the community composed the following goal:

Develop South Yale into a retail/commercial destination with local identity to serve local needs.

Design and Policy Objectives for implementing the goal:
1. Encourage more density to increase commercial services.
2. Allow mixed use, but ensure that commercial development is a priority.
3. Ensure development expresses South Yale as a unique area (utilize common urban design elements in the streetscape).
4. Maintain some westerly views by providing variation in building heights, framing views along side streets.
5. Promote a Park Once/Walk environment.
6. Create a pedestrian friendly/transit friendly development.

2.2 Goal for Entertainment and Hospitality Development

In recognition of the significant number of visitors and venues in the area, including UNM, the airport, and City sports venues and the potential to serve this population with local businesses and services, the community composed the following goal:

Develop South Yale into an enjoyable entertainment and hospitality destination which is an inviting, comfortable and easy to use environment for tourists and sports enthusiasts as well as residents.

Design and Policy Objectives for implementing the goal:
1. Develop a signage/wayfinding system that assists visitors and supports a unique area identity.
2. Develop an Office of Tourism and other amenities for visitors.
3. Facilitate an easy to use transportation and transit system.
4. Provide a pedestrian friendly environment.
5. Reduce event parking/traffic in residential neighborhoods.
6. Develop non-commercial places for people to frequent (gym, dog park, memorials, cultural center).
2.3 Goal for Healthy Neighborhood Development
In recognition of the importance of and need for creating a community with a strong social fabric and the impact of the area event venues, the community composed the following goal:

Develop South Yale as a healthy neighborhood which is safe, clean, and walkable with a vibrant mixed-use economic area that promotes community ownership.

Design and Policy Objectives for implementing the goal:
1. Limit development of stand alone apartment buildings along the Yale corridor by requiring mixed-use.
2. Encourage community and pride of ownership through high quality development.
3. Introduce pedestrian friendly sidewalks/streetscape/landscaping.
4. Create Shared Parking and Park Once options.
5. Reduce traffic speeds/congestion.
6. Provide easy access to transit services.

2.4 Goal for Public Realm Development
In recognition of the importance of a public space, including sidewalks, streets, parks, the public face of buildings and landscape that fosters economic and social vitality and the need to address the problem infrastructure in the area, the community composed the following goal:

Develop South Yale with a public setting that reflects New Mexico, is family friendly, and an easy and attractive place to conduct business for all populations.

Design and Policy Objectives for implementing the goal:
1. Develop Yale Boulevard as an attractive gateway to Albuquerque with landscaping, street improvements, signage and public art that reflect New Mexico.
2. Create a pedestrian friendly setting where transit is easy to use.
3. Ensure development is supportive of South Yale’s transit plans.
4. Ensure variety in building shapes and sizes.
5. Reduce conflicts between pedestrians and vehicles.
6. Ensure that South Yale remains welcoming to all ages and socioeconomic backgrounds.
7. Create spaces that engage social interaction and commercial activity.

3.0 TRANSLATING GOALS INTO POLICY
From the community goals and objectives and an analysis of area character and conditions (see Chapter 6), the Plan establishes a strategy to implement the larger community vision. This strategy occurs in the form of zone changes to key parcels as identified in Chapter 3, improvements to the Plan’s area transportation network as identified in Chapter 4 and recommendations for future Capital Improvement Projects as identified in Chapter 5. The combination of improvements to the private and the public realms will contribute to the area’s redevelopment into a thriving pedestrian-oriented neighborhood with a strong social and economic fabric.
CHAPTER TWO

Goals and Objectives

This page intentionally left blank.
CHAPTER THREE
Plan Implementation: Development Regulations
Figure 2: Former Plan Area Zoning
Figure 3: Shaded areas indicate proposed zoning changes
Figure 4: Zoning established by the South Yale Sector Development Plan
1.0 Introduction
This chapter establishes the regulatory framework to create the urban neighborhood envisioned by the community. It establishes SU-2 zoning for key properties with significant redevelopment potential within the Plan boundary. For properties with SU-2 zoning, the Plan adopts a form based approach to regulate lot layout, building form and use, building articulation, parking, landscaping and signage. Not all properties are rezoned with this Plan (see Figure 3 on page 11 for parcels with SU-2 zoning). Properties zoned R-1, some properties with SU-1 zoning (the South Yale Business Park, Veloport and Cemetery) and some properties with C-3 zoning maintain their existing zoning. No zoning changes are proposed for UNM, CNM and APS owned properties, as these properties are not under City jurisdiction.

By adopting a form based approach for the SU-2 zones established by this Plan, the Plan seeks to implement the community’s vision for the area in a manner which encourages appropriate development. The intent of the form based approach is to enable development outcomes which are more predictable for the developer, property owner, the City Review authorities, and community stakeholders.

2.0 SU-2 Zone Descriptions
The following SU-2 zones are established by this Sector Development Plan. These zones define and regulate the distinct areas which make up the Plan area.

Yale Corridor Commercial (YCC)
This zone consists of properties located along Yale Boulevard from St. Cyr to Ross, including the Loma Linda Community Center and City Transit Facility. The intent is to allow a mixture of complimentary land uses that include retail, offices, commercial services, residential and civic uses, in a compact urban form to create economic and social vitality.

Residential Multi-family 1 (RMF1)
This zone consists of the multi-family residential uses scattered throughout the Clayton Heights residential area. In anticipation of the redevelopment of these properties, this plan adopts form based standards to ensure that multi-family redevelopment is sensitive to adjacent single family homes.

Residential Multi-family 2 (RMF2)
This zone consists of higher density multi-family residential uses along Sunshine Terrace and Vail, NE. In anticipation of the redevelopment of these properties, this plan adopts form based standards to ensure that multi-family redevelopment is sensitive to existing single family homes.

Neighborhood Mixed Use (NMX)
This area includes a mix of residential and commercial properties at the southern end of Yale Boulevard at Gibson, extending west to Buena Vista. This zone addresses site planning and land use issues as well as topographical constraints (severe grade changes), to better integrate properties with existing neighborhoods while increasing opportunities for high-quality, mixed-use development.

Planned Neighborhood Residential (PNR)
This zone consists of the existing SU-1 PRD zoned parcels located within the Plan area. This zone is optional. Property owners may elect to use their existing zoning for an entire lot zoned SU-1 PRD or may elect to use the SU-2 PNR zone. The PNR zone is primarily a residential zone, with limited non-residential uses, which allows for large scale site planning opportunities commensurate with a neighborhood village environment.
CHAPTER THREE
REGULATORY

3.0 General Regulatory Requirements

3.1 Development Review Process
All development occurring in the following SU-2 zones requires approval as outlined in the matrix below:

<table>
<thead>
<tr>
<th>Compliant on Use and Form</th>
<th>Yale Corridor Commercial (YCC)</th>
<th>Residential Multi-Family 1 (RMF1)</th>
<th>Residential Multi-Family 2 (RMF2)</th>
<th>Neighborhood Mixed Use (NMX)</th>

</tr>
</tbody>
</table>

(Per City Zoning Code, all cases heard by the EPC are publicly notified.)

Figure 6: Development Approval Matrix

3.2 General Development Compliance
Development shall comply with the policies and design regulations for the South Yale Sector Development Plan as follows:

A. For undeveloped sites: all new development.

B. For sites with existing structures: when there is an increase of 15% or more to a building’s existing square footage.

C. Exemptions to compliance with the zoning regulations of this Plan:
   1. Repairs, remodeling and maintenance of existing structures and/or buildings.
   2. Facade improvements.
   3. Construction of a replacement building after involuntary damage to or destruction of existing building (such as fire damage).

D. Any uses for the sale of alcohol for off-premise consumption and auto repair that are existing, legal uses at the time this plan is adopted shall be permanently allowed as permissive uses on the parcels where they now exist.

3.3 Modifications to Sector Plan Zoning Regulations
The zoning regulations in this Plan are specific and prescriptive. This level of specificity provides certainty for applicants, neighborhoods and zoning staff. However, it is not the intent of these regulations to limit design creativity or ignore unique site conditions. As such, two levels of modifications to the zoning regulations are permitted as follows:

A. Minor: The Planning Director or his/her designee may approve deviations from any dimensional standards by no more than 10%

B. Major: Any modification of a dimensional standard that is greater than 10% shall be reviewed by the EPC.
4.0 How to use this document
The regulatory section of the Yale Sector Development Plan is predicated on a form based model which emphasizes prescriptive policies to guide development in the South Yale area. The form based regulations are divided into three sections: Zones, General Standards Applicable to All SU-2 zones and Building Components. This three part system is intended to ensure predictability in building use, placement, form and character and overall lot development.

4.1 Zones
The zones are the overall regulatory structure for specific areas within the Plan. Five SU-2 zones have been established for the Plan area. Each zone provides specific regulation on not only land use, but also building placement, height, parking and landscaping requirements and lists allowable Building Components such as Building Types and Frontage Types, and specific building, parking and landscaping standards.

4.2 General Standards Applicable To All SU-2 Zones
This section includes general standards for building design, parking design and landscape design. Where these standards conflict with 4.3 Building Components, section 4.3 Building Components shall apply.

4.3 Building Components
The Building Components include Building Types and Frontage Types which describe the general shape and appearance of a building. Building Types describe the volumetric properties of a building, building access and entry, building articulation and building specific landscaping requirements. Frontage Types describe the specific requirements for building fronts or faces such as fenestration, and additional setback allowances.

5.0 The SU-2 Zones
The following pages contain the standards for the five SU-2 zones established by this Plan.

---

**Figure 7: “How To” Process**

**STEP 1.**
1. Locate property and its zone on p. 12.
2. Read zone description on p. 13.

**STEP 2.**
1. Locate appropriate Zone regulation page.
2. Select an allowable Building and Frontage Type. See p. 38-45 for descriptions.
3. Follow Zone regulations for land use, building placement, heights, parking and landscaping requirements.
4. See General Standards applicable to all SU-2 Zones on p. 36-37 for additional requirements.

**STEP 3.** Submittal and Review Process
CHAPTER THREE
REGULATORY

5.0 Zones

Yale Corridor Commercial (YCC)

The Yale Corridor Commercial zone identifies land parcels which shall develop to accommodate business and housing to service neighborhood needs. Development shall be compact in scale and contribute to a rich and active pedestrian street life.

Block Organization

Block Organization pertains to development at the block level. The intent is to manage the overall character of the block while permitting the greatest amount of design flexibility at the lot level. All development in the YCC Zone shall comply with the following standards:

A. Height Limits Per Block - YCC

(To create a variety in building height along a block)
1. Building heights are limited to percentages of the block.
2. Building heights are allowed on a first come basis.
3. For building heights above 30’, no more than 120’ continuous linear feet along the block face shall be permitted without a minimum building height change of 5’.
4. Minimum building height shall be 26’.

<table>
<thead>
<tr>
<th>Building Height</th>
<th>Height Limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>26’-30’</td>
<td>Up to 100% of block face</td>
</tr>
<tr>
<td>40’</td>
<td>60% Max of block face</td>
</tr>
<tr>
<td>50’</td>
<td>40% Max of block face</td>
</tr>
</tbody>
</table>

B. Building Type Limits Per Block - YCC

Some Building Types are limited per block along Yale Boulevard to preserve the pedestrian scale and to provide visual interest and variety. The following Building Types are limited in the Yale Commercial Corridor zone:

<table>
<thead>
<tr>
<th>Building Type</th>
<th>Allowable Number/ 600’ or less Block</th>
<th>Allowable Number/ Greater than 600’ Block</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Urban Garden</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>2. Courtyard</td>
<td>2</td>
<td>2</td>
</tr>
<tr>
<td>3. Lined Parking Structure</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>4. Urban Park</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>5. Live/Work</td>
<td>2</td>
<td>2</td>
</tr>
</tbody>
</table>

(Building Types which are not listed above are not limited in number.)
CHAPTER THREE
REGULATORY

YALE CORRIDOR COMMERCIAL (YCC)

C. LOT SIZE LIMITS - YCC
Lot sizes in the Yale Commercial Corridor are not limited.

D. LOT ACCESS - YCC
Service and parking access shall be via a rear access easement, mid block access points, or side drive aisles. In order to reduce the conflict between pedestrians and vehicular traffic and to provide a safe, comfortable walkable environment along Yale Boulevard, lot access shall be regulated as follows:

1. Existing curb cuts may remain until a continuous rear access easement (alley) is available. No more than one existing curb cut per parcel is permitted.

2. New curb cuts along Yale Boulevard shall be regulated as follows:
   • Upon redevelopment of a property, if a rear access easement (alley) is not available and a new drive access from Yale is required to access the property, an 18' wide access drive may be provided at the side property line. One access drive to Yale is permitted per parcel. The side drive location will allow for shared side drive opportunities.
   • For corner parcels, no new curb cuts are permitted from Yale Boulevard. Drive access shall be limited to the side street location where curb cuts shall be sited within 20' of the rear property line at the future rear access easement (alley) location.

3. All new and existing drive pads along Yale Boulevard shall be modified to ensure a 6' wide area that is level with the connecting sidewalk along Yale Boulevard.

4. All parcels shall preserve an area 20' deep, measured from the rear property line, for a future rear access easement or alley (see 5. below).

5. Rear Access Easement or Alley. The Plan proposes the development of a rear access easement or alley for properties zoned YCC. This easement would eliminate unsafe pedestrian conditions along Yale Boulevard. For lots located on the west side of Yale Boulevard, the alley would also serve as a drainage easement to mitigate the flooding of surface runoff onto adjacent residential lots. Upon City determination to proceed with the development of the rear access easement, the following standards shall apply:
   • The rear access easement or alley shall serve as the primary vehicular access to individual lots along Yale Boulevard. The rear access easement shall be engineered, fully paved and for lots located along the west side of Yale Boulevard, incorporate storm drainage.
   • Upon completion of a continuous rear access easement or alley, the City reserves the right to restrict vehicular use of the front access drives along Yale Boulevard. At that time, the front access drives may be converted to outdoor open space, patio space, or a pocket park, providing pedestrian connections to the rear area of the lot.
   • The rear access easement or alley shall have a width of 20'.
YALE CORRIDOR COMMERCIAL (YCC)

ZONE INTENT The intent of the YCC zone is to create a pedestrian-friendly setting with a mix of neighborhood commercial and residential uses. In order to prioritize pedestrian accessibility, buildings are oriented to the street, attached and aligned, providing a continuous street frontage at the sidewalk.

A. BUILDING PLACEMENT - YCC
Build-to-Line (BTL) (Measured from property line)
Front  0'
Side    0'
Side (with side drive condition)  18'
(Civic Building Type is exempt from BTL requirements)

Setback (Measured from property line)
Rear  20' min.

B. BUILDING FRONTAGE - YCC
Frontage
1. Maximum building frontage length without a change in depth, height, material or articulation: 120'
2. Required Building Frontage at BTL:
   - Frontages up to 60'  40% min.
   - Frontages greater than 60'  50% min.
3. Allowable Building Frontage setback distance: 10' max. from BTL
4. Specific Frontage Types may allow additional setbacks. See pages 44-45.
5. Frontage requirements do not apply to Courtyard and Civic Building Types.
CHAPTER THREE
REGULATORY

YALE CORRIDOR COMMERCIAL (YCC)

C. BUILDING HEIGHT - YCC
(Building height shall be measured from Yale Boulevard sidewalk elevation)
Minimum Building Height 26'
Maximum Building Height 50'
Finish Floor at sidewalk elevation
Ground Floor Clear Height 10' min.

D. BUILDING STEPBACK - YCC
In order to preserve solar access and transition building heights to adjacent to residential uses, the rear portion of the building shall stepback in order to fit within a 45 degree angle plane measured from 10' high at the rear property line.

E. BUILDING USES - YCC
(See side column specific Land Uses)
Ground Floor Commercial/Office
Upper Floor(s) Residential/Office/Commercial

F. PARKING REQUIREMENTS - YCC
1. Parking shall be accessed via existing curb cuts, side drives or rear access easements. See YCC Lot Access, page 17.
2. Parking shall be located behind buildings in rear portion of lot or along side drives.
3. Corner lots shall take access to rear parking from side street.
4. Compact Spaces are permitted as defined in the City Zoning Code.
5. Required Spaces:
   - Ground Floor up to 1000 sqft none
   - Greater than 1000 sqft 1/1000 sqft
   - Upper Floors Residential 1/unit
   - Non-Residential 1.5/unit
   - Live/work
6. Parking Lot Landscape requirements: 1 tree minimum for up to 4 spaces, plus 1 tree for every 6 additional spaces.

YCC LAND USE:
R-2 and C-2 Permissive Uses with the following additions and exceptions:

Additional Uses:
Alcohol sales for off-premise consumption in conjunction with a full service grocery store and within 500' of a residential zone.

Prohibited Uses:
1. Antenna
2. Adult Establishment
3. Drive-in Restaurant
4. Drive-up Service Window
5. Gasoline, oil and liquefied petroleum gas retailing
6. Parking lot
7. Off-premise signs
8. Vehicle sales, rental, service, repair, and storage, both indoor and outdoor
9. Vehicle washing, unless located in parking structure
10. Wireless Telecommunications Tower

Conditional Uses:
1. C-2 Conditional Uses
2. Package Liquor Stores
CHAPTER THREE
REGULATORY

5.0 Zones RMF1
Lot Organization

RMF1 KEY CHARACTERISTICS

Complement adjacent R-1, single family housing
Reflect scale of existing neighborhood
Buildings oriented to the street
Allowable uses complementary to single family uses
Minimize parking visible from the street

RMF1 PERMITTED BUILDING TYPES

Duplex/Triplex/Fourplex
Row House
Sideyard Row House
Courtyard Apartments
Patio House
Casita Courts
Single Family Residential
Accessory Building

RMF1 PERMITTED FRONTAGE TYPES

Court
Patio
Portal
Porch
Stoop

ZONE INTENT The intent of the RMF1 zone is to provide standards for multifamily development which are consistent with and sensitive to existing single and multifamily housing. In order to preserve the existing character of the Clayton Heights neighborhood, new or remodeled multi-family housing should complement existing adjacent single family or multifamily housing by reflecting the scale and proportion of the existing neighborhood. Parking and services for multi-family housing should be screened from view to protect the neighborhood character.

A. BUILDING PLACEMENT - RMF1

Build-to-Line (BTL) (Measured from property line)
Front 15’

Setback (Measured from property line)
Side 5’ min.
Rear 15’ min.
Side Street 20’ min.
Garage setback 10’ min. from BTL

B. BUILDING FRONTAGE - RMF1

Maximum Building Frontage length without a change in height, depth, material or articulation: 60’

Street Frontage Setback
Required Building Frontage at BTL* 50% min.
*Except Courtyard Apartment Type

C. BUILDING HEIGHT - RMF1

(Building height shall be measured from finished floor elevation)
Maximum Building Height 30’
D. **USABLE OPEN SPACE REQUIREMENTS - RMF1**
Open Space requirements shall be as required by the R-2 zone of the City Zoning Code. Porches, patios and balconies may count toward open space requirements.

E. **PARKING REQUIREMENTS - RMF1**
1. Parking shall be located at the side or rear of lot.
2. Corner lots may have access to parking from side street.
3. Compact spaces are permitted as defined in the City Zoning Code.
4. Required spaces per the City zoning code Section 14-16-3-1, Off-Street Parking regulations.
5. Parking Lot Landscape requirements: 1 tree minimum for up to 4 spaces, plus 1 tree for every 6 additional spaces.

F. **Landscape REQUIREMENTS - RMF1**
Landscape requirements shall be per City of Albuquerque Zoning Code Section 14-16-3-10, for Apartment and Non Residential Development.
**RESIDENTIAL MULTIFAMILY 2 (RMF2)**

**ZONE INTENT**

The intent of the RMF2 zone is to provide standards for multifamily housing which promote redevelopment that is sensitive to the neighboring single family housing while allowing a larger scale pattern of multi-family development. In order to protect the character of the existing single family development along Sunshine Terrace, new multi-family buildings shall be oriented to the street and with a scale that compliments neighboring houses. When parking is located in front of buildings, a landscape buffer shall screen parking from view of the street.

**A. LOT SIZE LIMITS - RMF2**

Lot sizes in the Residential Multi-Family Zone are not limited.

**B. BUILDING PLACEMENT - RMF2**

Setback (Measured from property line)

- Front: 15’ min.
- Side: 5’ min.
- Rear: 15’ min.
- Corner: 20’ min.
- Garage setback (from primary building facade): 10’ min.

**C. BUILDING FRONTAGE - RMF2**

Maximum building frontage length without a change in height, depth, material or articulation: 60’

**D. BUILDING HEIGHT - RMF2**

(Building height shall be measured from finished floor elevation)

Maximum Building Height: 30’
E. USABLE OPEN SPACE REQUIREMENTS - RMF2
Open Space requirements shall be regulated by the R-2 zone of the City Zoning Code. Porches, patios and balconies may count toward open space requirements.

F. PARKING REQUIREMENTS - RMF2
1. Parking is encouraged to be located behind buildings in rear portion of lot or along side drives.
2. When parking is located in front of the building, it shall be located behind a solid, three foot high wall. See Landscaping Requirements below.
3. Corner lots shall have access to parking from side street.
4. Required spaces per the City zoning code Section 14-16-3-1, Off-Street Parking regulations.
5. Parking Landscape requirements: 1 tree min. per parking area and a min. of 1 tree per 4 additional parking spaces.
6. No head in parking is permitted adjacent to a residential building.
7. No parking is permitted in the landscape buffers.

G. LANDSCAPING REQUIREMENTS - RMF2
Landcape requirements shall be per City of Albuquerque Zoning Code Section 14-16-3-10, for Apartment and Non Residential Development with the following additions:

1. Where parking is located at the front of the lot, visible from the street, the front setback shall be landscaped with a 3' high, solid wall at the 5' front setback line and 1 tree and 5 shrubs for every 200 sf of setback area.
2. A 10 foot wide landscape buffer adjacent to the front of the building is required. The landscape buffer may include a 5 foot wide concrete walkway.
**Neighborhood Mixed Use (NMX)**

**Zone Intent**
The intent of the NMX zone is to encourage integration of residential and commercial uses and to connect this area to the larger South Yale community. Mixed use development that is pedestrian friendly is encouraged in the NMX zone. Buildings will orient towards Yale Boulevard at a scale and height that is appropriate to the area’s proximity to Gibson Boulevard. Parking and service should be located behind buildings where possible in order to facilitate pedestrian access along Yale Boulevard.

**A. Lot Size Limits - NMX**
Lot sizes in the NMX Zone are not limited.

**B. Building Placement - NMX**

- **Setback (Measured from property line)**
  - Front: 5'-15'
  - Side: 0' min.
  - Rear: 15' min.
  - Garage setback (from primary building facade): 10' min.

  (If a lot spans from Yale Boulevard to Wilmoore Avenue, Yale Boulevard shall be treated as a Front property line and Wilmoore Avenue may be treated as a Rear or Front property line.)

**C. Building Frontage - NMX**
Maximum Building Frontage length without a change in height, depth material or articulation: 120'

**Frontage Setback**
Required Building Frontage at Front setback: 50% min.

**D. Building Height - NMX**
(Building height shall be measured from sidewalk elevation)
- Minimum Building Height: 26'
- Maximum Building Height: 50' (30' within 200' of R-1)
- Finish Floor: At sidewalk elevation
- Ground Floor Clear Height: 10' min.

**NMX Key Characteristics**
- Mixed Use Development
- Buildings oriented to the street
- Higher density residential
- Parking located behind buildings accessed via shared drive or alley where permissible
E. OPEN SPACE REQUIREMENTS - NMX

There are no usable open space requirements for residential uses in the Neighborhood Mixed Use zone due to the proximity of significant open space and parks in the area.

F. PARKING REQUIREMENTS - NMX

1. Parking shall be accessed via side driveways or rear access easements.
2. Parking shall be located behind buildings in rear portion of lot or along side drives.
3. Corner lots may access to parking from side street.
4. Compact Spaces are permitted as defined in the City Zoning Code.
5. Required Spaces:
   - Residential up to 1000 sqft 1/unit
   - greater than 1000 sqft 1.5/unit
   - Non Residential up to 3000 sqft none
   - greater than 3000 sqft 1/adj. 1000 sqft
   - Live/work 1.5/unit
6. Parking lot landscape requirements: 1 tree minimum for up to 4 spaces, plus 1 tree for every 6 additional spaces.

G. LANDSCAPING REQUIREMENTS - NMX

1. Front setback area shall be landscaped with a minimum of 1 tree and 3 shrubs/grasses for every 200 sf.
2. No asphalt is permitted in the front setback.

H. LOTACCESS - NMX

Service and parking access shall be from a rear access easement, alley or side drive aisle. Service and parking shall not be in front of building. In order to reduce the conflict between pedestrian and vehicular traffic, lot access shall be regulated as follows:
1. Only one curb cut is permitted per lot.
2. Side access drives are limited to 24’ wide.
3. One bay of parking is permitted within the 24’ width of side access drive.
CHAPTER THREE
REGULATORY

PLANNED NEIGHBORHOOD RESIDENTIAL (PNR)

1. OVERVIEW
The Planned Neighborhood Residential zone identifies large land parcels currently zoned SU-1 PRD (Special Use for Planned Residential Development). These parcels represent a future opportunity for the creation of mixed use neighborhoods which increase pedestrian activity and social interaction in an identifiable and interconnected way.

Development guidelines for the Planned Neighborhood Residential (PNR) zone are based on development intensity or “level”. Four development levels have been identified as appropriate for the South Yale area. Each level integrates building and lot components into a comprehensive tool for development.

The PNR section begins on page 27 with a general overview summarizing the different level characteristics. Each level is further defined and illustrated in the following pages.

2. HOW TO USE THIS SECTION
A. Determine which PNR development level(s) are appropriate for desired development intensity and character, based on the summary of levels, page 27.
B. Review the General PNR Standards, page 27.
C. Upon selection of desired development levels for the PNR area, review level specific development standards for allowable Building and Frontage Types, Building Placement, Heights, Land Uses and other Design Standards.
D. Review requirements of specific Building Types, Frontage Types and General Standards Applicable to All SU-2 Zones, located beginning on page 38.

3. GENERAL SUBMITTAL REQUIREMENTS
A. Provide for DRB review and approval, an accurate PNR Masterplan at a scale of at least 1 inch to 100 feet which covers at least one lot and specifies the site, location of proposed PNR levels, location of internal streets and alleys, and location of usable open space in excess of 3,000 sf.
B. Upon approval of the PNR Masterplan by DRB, property may proceed directly to Building Permit.

Figure 20: PNR STREET LEVEL DIAGRAM

PNR KEY CHARACTERISTICS:
Compact development in a planned community setting
Efficient and effective circulation patterns for streets and pedestrian pathways
Buildings oriented to the street
On street parking
Outdoor gathering spaces and public open space
Higher density residential
Parking located behind buildings and access via alleys
CHAPTER THREE
REGULATORY

PLANNED NEIGHBORHOOD RESIDENTIAL (PNR)

4. SUMMARY OF DEVELOPMENT LEVELS
The following classification system has been developed to facilitate development of SU-2 PNR zoned properties in the South Yale area. Should a property owner elect to follow the standards of the SU-2 PNR zone, the SU-2 PNR zoning shall be applicable to the entire lot.

Level 1: This designation is for the highest intensity development allowed in the PNR area. Level 1 development is only permitted on parcels adjacent to Gibson or University Blvd. Development is two to five stories high. Buildings may be oriented towards parking courts interior to the block, but shall also have articulated street facades and entrances oriented to streets. Development may include shopping centers, hotels, civic buildings and apartment complexes.

Level 2: This designation is intended for moderate density neighborhoods, including mixed use development. Development is two to four stories high and buildings are aligned and adjacent to the sidewalk. Development is of a neighborhood urban scale with an emphasis on walkability. Ground level uses should be retail/commercial with a mix of office and residential above. Parking and building service access shall be via an alley network.

Level 3: This designation is for a mixed-use residential development. Development is one to three stories and may include apartments, row houses, live/work, offices, hotels, and retail services supportive to household living. Buildings may be built to the street or setback to accommodate green space and patios. Parking and building service access shall be via an alley network.

Level 4: This designation is for residential development consisting of single and multifamily housing which in character reflect a urban single family residential neighborhood. Buildings are setback from the street with a minimal side yard setback. Garages and parking are accessed via an alley network.

Figure 21: PNR LEVELS DIAGRAM

5. GENERAL PNR STANDARDS (applicable to all PNR levels):
1. Block lengths shall be limited to 660' on north/south streets measured from center of the block to center of the block and 330' on east/west streets measured from center of the block to center of the block.
2. A minimum of 6' clear sidewalk shall be provided.
3. Street trees are required on all streets and shall be a minimum of 30' on center.
4. On street parking is recommended on all streets to provide a buffer for pedestrians and to create additional parking in the area.
5. 20' wide alleys are required behind all lots for service and loading.
6. Designated bike lanes shall be a minimum of 6' wide and clearly marked.
5.0 Zones

LEVEL 1 PERMITTED BUILDING TYPES

- Urban Standard
- Urban Garden
- Liner Building
- Lined Parking Structure
- Civic Building
- Courtyard Building
- Urban Park
- Terrace Apartments
- Stacked Flats
- Live/Work
- Courtyard Apartments
- Duplex/Triplex/Fourplex
- Row House

LEVEL 1 KEY CHARACTERISTICS:

- Located on parcels adjacent to Gibson or University Blvd.
- Buildings oriented to interior parking court and street
- Parking is located in small interior courts and behind buildings
- Continuous sidewalk network through site

LEVEL 1 PERMITTED FRONTAGE TYPES

- Department Store
- Hotel
- Store Front
- Office
- Lobby
- Cafe
- Portal
- Patio
- Court
- Stoop
- Porch

INTENT - LEVEL 1

The intent of PNR Level 1 is to enable the highest intensity development allowed in the PNR area. Level 1 development is only permitted on parcels adjacent to Gibson or University Blvd. Development is two to five stories high. Buildings may be oriented parking courts interior to the block, but shall also have articulated street facades and entrance oriented to interior streets. Development may include shopping centers, hotels, civic buildings and apartment complexes.

A. LOT SIZE LIMITS - LEVEL 1

Lot sizes in Level 1 are not limited.

B. BUILDING PLACEMENT - LEVEL 1

Build-to-Line (Measured from property line)
Fronting on Gibson or University Boulevards 15'

Setback (Measured from property line)
- Side 0’ min.
- Rear (alley condition) 0’ min.
- Rear (non-alley condition) 20’ min.

C. BUILDING FRONTAGE - LEVEL 1

Maximum Building Frontage length without a change in height, depth, material or articulation: 100'

Frontage Setback
- Required Building Frontage at BTL: 75% min.
- Allowable Building Frontage setback from BTL: 10’ max.

Specific Frontage Types may allow for additional Frontage setback.

D. BUILDING HEIGHT - LEVEL 1

(Building height shall be measured from sidewalk elevation)
- Minimum Building Height 26’
- Maximum Building Height 50’ (30’ within 100’ of R-1)
- Finish Floor at sidewalk
- Ground Floor Clear Height 10’ min.
E. OPEN SPACE REQUIREMENTS - LEVEL 1

Usable open space shall be calculated as follows:
- 50 sf for 1 bedroom
- 100 sf for 2 bedrooms
- 150 sf for 3 or more bedrooms

Required open space shall be apportioned as follows:
1. For the first 6,000 sf of open space: balconies, patios, courts or portals, may count towards required open space.
2. Open space in excess of 6,000 sf shall be aggregated into parks or plazas with an area of at least 2,500 sf.
3. Upon satisfaction of a park or plaza of at least 2,500 sf, the remainder of required open space may be provided in parks, plazas, balconies, patios, porches, portals, rooftop gardens or terraces.

F. PARKING REQUIREMENTS - LEVEL 1

1. Parking shall be divided into separate modules, as follows:
   - A module is defined as no more than 100 parking spaces.
   - Modules must be separated by either buildings, open space areas or pedestrian paths with landscaping areas not less than 20' wide.
   - Landscaping within a module shall be a minimum of 1 canopy tree and 2 shrubs per 8 spaces.
2. Pavement in parking areas shall be limited to areas required for travel and parking.
3. Compact spaces are permitted as defined in the City Zoning Code.
4. Required spaces:
   - Residential:
     - up to 1000 sqft: 1/unit
     - greater than 1000 sqft: 1.5/unit
   - Non Residential:
     - less than 2000 sqft: none
     - greater than 2000 sqft: 1/add. 1000
   - Live/Work: 1.5/unit

PNR - LEVEL 1 LAND USE:
R-2 and C-2 Permissive Uses with the following additions and exceptions:

Additional Permitted Uses:
- Alcohol sales for off-premise consumption in conjunction with a full service grocery store.

Prohibited Uses:
- Antenna
- Adult Establishment
- Drive-in Restaurant
- Drive-up Service Window
- Gasoline, oil and liquefied petroleum gas retailing
- Parking lot
- Off-premise signs
- Vehicle sales, rental, service, repair, and storage, both indoor and outdoor
- Vehicle washing, unless located in parking structure
- Wireless Telecommunications Tower

Conditional Uses:
- C-2 Conditional Uses
- Package Liquor Stores
LEVEL 2 KEY CHARACTERISTICS:

Buildings are oriented to the street.

Buildings are attached and aligned, providing continuous street frontage on the sidewalk.

Awnings and balconies articulate the front facade and provide shade for pedestrians along the sidewalk.

No residential uses are permitted on ground level.

LEVEL 2 PERMITTED BUILDING TYPES

Urban Standard
Urban Garden
Liner Building
Lined Parking Structure
Civic Building
Courtyard Building
Urban Park
Terrace Apartments
Stacked Flats
Live/Work
Courtyard Apartments
Duplex/Triplex/Fourplex
Row House
Sideyard Row
Casita Courts

LEVEL 2 PERMITTED FRONTAGE TYPES

Department Store
Hotel
Store Front
Office
Lobby
Cafe
Portal
Patio
Court
Stoop

INTENT - LEVEL 2 The intent of PNR Level 2 is to create an urban, mixed use pedestrian environment with moderate density housing. Buildings are attached, aligned and oriented to the street to provide a continuous street frontage at the sidewalk. Awnings and balconies shall articulate the front facades and provide shade for pedestrians along the sidewalk. Residential uses on the ground floor of the street façade should be limited in this zone.

A. LOT SIZE LIMITS - LEVEL 2

Lot sizes in Level 2 are not limited.

B. BUILDING PLACEMENT - LEVEL 2

Build-to-Line (Measured from property line)

Front
Setback (Measured from property line)
Side or Side Street
Rear

15’ min.

C. BUILDING FRONTAGE - LEVEL 2

Maximum Building Frontage length with out a change in height, depth, material or articulation: 100’

Frontage Setback

Required Building Frontage at BTL:

to 60 LF

Greater than 60 LF

Allowable Building Frontage setback from BTL:

10’ max.

Specific Frontage Types may allow for additional Frontage setback.

D. BUILDING HEIGHT - LEVEL 2

(Building height shall be measured from sidewalk elevation)

Minimum Building Height 26’

Maximum Building Height 50’ (30’ within 200’ of R-1)

Finish Floor at sidewalk elevation

Ground Floor Clear Height 10’ min.
E. BUILDING USE - LEVEL 2
(See side column for specific Land Uses)
- Ground Floor: Commercial, Office
- Upper Floor(s): Residential, Commercial, Office

F. OPEN SPACE REQUIREMENTS - LEVEL 2
Usable open space shall be calculated as follows:
- 50 sf for 1 bedroom
- 100 sf for 2 bedrooms
- 150 sf for 3 or more bedrooms

Required open space shall be apportioned as follows:
1. For the first 4,000 sf of open space: balconies, patios, courts or portals may count towards required open space.
2. Open space in excess of 4,000 sf shall be aggregated into parks or plazas with an area of at least 2,500 sf. Parks or plazas shall be located in an Urban Park Building, a Courtyard building or behind a building.
3. Upon satisfaction of a park or plaza of at least 2,500 sf, the remainder of required open space may be provided in parks, plazas, balconies, patios, porches, portals, rooftop gardens or terraces.

G. PARKING REQUIREMENTS - LEVEL 2
1. Parking shall be accessed via side drives where alleys are prohibitive.
2. Parking shall be located behind buildings in rear portion of lot.
3. Corner lots may have access to parking from side street.
4. Pavement in parking areas shall be limited to areas required for travel and parking.
5. Compact Spaces are permitted as defined in the City Zoning Code
6. Required Spaces:
   - Residential: up to 1000 sqft 1/unit
   - Non Residential: less than 2000 sqft none
   - greater than 2000 sqft 1/adj. 1000
   - Live/Work 1.5/unit
7. Parking Landscape requirements: 1 tree minimum for up to 4 spaces, plus 1 tree for every 6 additional spaces.

PNR - LEVEL 2 LAND USE:
- R-2 and C-2 Permissive Uses with the following additions and exceptions:
  - Additional Permitted Uses: Alcohol sales for off-premise consumption in conjunction with a full service grocery store.
  - Prohibited Uses:
    1. Antenna
    2. Adult Establishment
    3. Drive-in Restaurant
    4. Drive-up Service Window
    5. Gasoline, oil and liquefied petroleum gas retailing
    6. Parking lot
    7. Off-premise signs
    8. Vehicle sales, rental, service, repair, and storage, both indoor and outdoor
    9. Vehicle washing, unless located in parking structure
    10. Wireless Telecommunications Tower
  - Conditional Uses
    - C-2 Conditional Uses
    - Package Liquor Stores

LEVEL 3 PERMITTED FRONTAGE TYPES
Store Front
Hotel
Office
Lobby
Cafe
Portal
Patio
Stoop
Porch
Court

INTENT - LEVEL 3
The intent of PNR Level 3 is to create a mixed use pedestrian environment of medium density which maintains some of the traditional development patterns of New Mexico. Buildings are oriented to the street and may have porches, portals and courtyards in the front setback. Front areas which are not hardscaped shall be landscaped. Building uses may be mixed use, residential or commercial.

A. LOT SIZE LIMITS - LEVEL 3
Lot sizes in Level 3 are not limited.

B. BUILDING PLACEMENT - LEVEL 3
Build-to-Line (Measured from property line)
Front 0’-10’
Side Street 0’-10’

Setback (Measured from property line)
Side 0’ min.
Rear 15’ min.

C. BUILDING FRONTAGE - LEVEL 3
Maximum Building Frontage length with out a change in height, depth, material or articulation: 100’

Street Frontage Setback
Required Building Frontage at BTL:
up to 60 LF 40%
greater than 60 LF 50%
Allowable Building Frontage setback distance from BTL: 10’ max.
Specific Frontage Types may allow for additional Frontage setback.

D. BUILDING HEIGHT - LEVEL 3
(Building height shall be measured from sidewalk elevation)
Minimum Building Height 26’
Maximum Building Height 40’
Finish Floor at sidewalk elevation
Ground Floor Clear Height 10’ min.
CHAPTER THREE
REGULATORY

South Yale Sector Development Plan

E. OPEN SPACE REQUIREMENTS - LEVEL 3

Usable open space shall be calculated as follows:
- 200 sf for 1 bedroom
- 300 sf for 2 bedrooms
- 400 sf for 3 or more bedrooms

Required open space shall be apportioned as follows:
1. For the first 4,000 sf of open space: balconies, patios, courts or portals, may count towards required open space.
2. Open space in excess of 4,000 sf shall be aggregated into parks or plazas with an area of at least 2,500 sf.
3. Upon satisfaction of a park or plaza of at least 2,500 sf, the remainder of required open space may be provided in parks, plazas, balconies, patios, porches, portals, rooftop gardens or terraces.

F. PARKING REQUIREMENTS - LEVEL 3

1. Parking shall be accessed via shared side access easements where alleys are prohibitive.
2. Parking shall be located behind buildings in rear portion of lot.
3. Corner lots may have access to parking from side street.
4. Pavement in parking areas shall be limited to areas required for travel and parking.
5. Compact Spaces are permitted as defined in the City Zoning Code.
6. Required Spaces:
   - Residential Uses: up to 1000 sf 1/unit
   - Residential Uses: greater than 1000 sf 1.5/unit
   - Non-residential Uses: 1/1000 sqft
   - Live/work: 1.5/unit
7. Parking Landscape requirements: 1 tree minimum for up to 4 spaces, plus 1 tree for every 6 additional spaces.

PNR - LEVEL 3 LAND USE

R-2 and C-2 Permissive Uses with the following additions and exceptions:

Additional Uses:
- Alcohol sales for off-premise consumption in conjunction with a full service grocery store.

Prohibited Uses:
- Antenna
- Adult Establishment
- Drive-in Restaurant
- Drive-up Service Window
- Gasoline, oil and liquefied petroleum gas retailing
- Parking lot
- Off-premise signs
- Vehicle sales, rental, service, repair, and storage, both indoor and outdoor
- Vehicle washing, unless located in parking structure
- Wireless Telecommunications Tower

Conditional Uses:
- C-2 Conditional Uses
- Package Liquor Stores
CHAPTER THREE
REGULATORY

LEVEL 4 KEY CHARACTERISTICS:
Buildings oriented to the street
Buildings are residential
Multi-family buildings respect single family scale
Building Fronts are set back from the street, stoops, porches and patios are permitted in setback area.

LEVEL 4 KEY CHARACTERISTICS:
Buildings oriented to the street
Buildings are residential
Multi-family buildings respect single family scale
Building Fronts are set back from the street, stoops, porches and patios are permitted in setback area.

LEVEL 4 PERMITTED BUILDING TYPES
Row House
Sideyard Row
Duplex/Triplex/Fourplex
Casta Court
Patio House
Single Family House
Accessory Building

LEVEL 4 PERMITTED FRONTAGE TYPES
Portal
Patio
Stoop
Porch

INTENT - LEVEL 4 The intent of PNR Level 4 is to create a residential neighborhood which includes a variety of semi-urban housing types. Buildings are primarily residential and may be single family or multi-family with front yard setbacks. Stoops, porches and patios are permitted in the front yard setback.

A. LOT SIZE LIMITS - LEVEL 4
Level 4 lot sizes are limited to the following:

<table>
<thead>
<tr>
<th>Lot Width</th>
<th>Lot Depth</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum</td>
<td>50'</td>
</tr>
<tr>
<td>Minimum</td>
<td>25'</td>
</tr>
</tbody>
</table>

B. BUILDING PLACEMENT - LEVEL 4
Build-to-Line (Measured from property line)
Front 15'
Setback (Measured from property line)
Side Street setback 10’ min.
Side 5’ min.
Rear 15’ min.
Front Garage or Accessory Bldg. setback 10’ min. from Front BTL
Rear Garage or Accessory Bldg. setback 5’ min.

C. BUILDING FRONTAGE - LEVEL 4
Frontage Setback
Required Building Frontage at BTL 40%

D. BUILDING HEIGHT - LEVEL 4
(Building height shall be measured from finished floor elevation)
Maximum Building Height 30’
E. BUILDING USES - LEVEL 4
(See side column for specific Land Uses)
Residential Only

F. USABLE OPEN SPACE REQUIREMENTS - LEVEL 4
Open Space requirements shall be as defined by the R-2 zone of the City Zoning Code.

G. PARKING REQUIREMENTS - LEVEL 4
1. Parking shall be accessed via shared side access easements where alleys are prohibitive.
2. Parking shall be located behind buildings in rear portion of lot.
3. Corner lots may have access to parking from side street.
4. Pavement in parking areas shall be limited to areas required for travel and parking.
5. Compact Spaces are permitted as defined in the City Zoning Code.
6. Required Spaces:
   - less than 1000 sqft: 1/unit
   - greater than 1000 sqft: 2/unit
6.0 General Standards

6.0 General Standards Applicable To All SU-2 Zones

6.1 The General Building and Site Design Regulations for Non-Residential Uses of the Zoning Code, Sections 14-16-3-18 (C)(2) and 14-16-3-18 (D) shall apply with the following exceptions:

1. Two or more Pedestrian Features (Section 1-16-3-18 (C)(2)) are required.
2. Glass height shall be a minimum of 8 feet, above finished floor.
3. Sill height shall not exceed 36 inches measured from sidewalk elevation.
4. Outdoor seating requirement for buildings over 100 feet in length shall be provided as street furniture except buildings with a restaurant, cafe or similar use.
5. A primary entrance for every building shall directly face a street, except courtyard buildings where primary entrances may face a central courtyard.
6. Ground-mounted mechanical and electrical equipment, including transformers shall not be located adjacent to a major facade.
7. Art murals shall not require coordination with the City Arts Program.
8. No exceptions are permitted for pedestrian amenities to Section 14-16-3-18 (D) Design Standards.
9. Loading areas shall not be visible from a public right of way or residentially zoned property.

6.2 The Supplementary Height, Area and Use Regulations of the City Zoning Code, Section 14-16-3-3, shall apply with the following exceptions:

1. Wall heights within 20 feet of the public street right of way and 40 feet of the front property line shall meet Street Walls requirements of this document (See also requirements for Street Walls, 6.7.5).
2. Accessory structures shall follow setback requirement of the zones established in this plan.

6.3 Exterior Facade Treatment:

1. Large buildings over 30,000 square feet shall be located to minimize the impact of windowless walls and service areas on public streets.
2. In addition to applicable design standards of 14-16-3-18 (D), upper floors on street facades shall have a minimum of 20% glazing.

6.4 Corner Lots:

1. Buildings on corner lots shall address the corner in one of the following ways: 1) Location of main entrance at corner, 2) Articulation at corner of building relating to corner, e.g. curve, angle, step back or projection, 3) Tower element or 4) as approved by Planning Director.

6.5 Service, loading and outdoor storage locations/screening:

1. Service, loading and storage areas shall not front onto public streets and open spaces.
2. Service and loading areas shall be visually screened from view of public streets or open space.
3. Service, loading and emergency service lanes shall be designed as part of the site circulation and shall not use dedicated lanes that add impervious surface.
4. Outdoor storage areas shall be screened.
5. The Recycling Bin Regulations of the City’s Zoning Code, Section 14-16-3-15, shall apply.

6.6 Encroachments:

1. Encroachments shall comply with the City’s review and approval process for Encroachment Agreements.
2. Awnings shall not be back-lit, high gloss, or plasticized fabrics.

6.7 Fences and Walls:

1. Screen or perimeter walls and fences shall comply with the intent of the City’s design manual for subdivision access and perimeter walls.
2. Chain link fencing is not permitted.
3. Walls and fences exceeding 3’ feet in height that are located within the setback area adjoining a public street shall provide variety and articulation at intervals not exceeding 30 feet through either changes in plane or expression of structure, such as a post, column, or pilaster.
4. Temporary construction fences are permitted.
5. Street Walls shall comply with Section 14-16-3-19 of the City’s Zoning Code, with the following exceptions:
   • Walls within 20 feet of the public street right-of-way shall not exceed three feet in height above the
     abutting grade on the street side.
   • For Courtyard Buildings and Courtyard Apartments, see specific Building Type for additional street wall
     allowances.

6.8 Lighting:
   Lighting shall comply with Section 14-16-3-9 of the City’s Zoning Code with the following additions:
   1. Exterior building lights shall be mounted between 7 feet and 14 feet above grade.
   2. Alley and side drive aisle lighting shall be within 5 feet of the edge of alley or drive aisle pavement and not
      cause glare into adjacent lots. Where possible alley lighting shall be attached to a building.

6.9 Signage:
   Signage standards of the City’s Zoning Code, Section 14-16-3-5, shall apply with the following exceptions:
   1. Off-premise signs are not permitted.
   2. LED signs are not permitted.
   3. Signage may be placed on awnings, canopies and shade structures.
   4. Signs advertising alcoholic beverages shall be located inside buildings and may not be greater than 4
      square feet in area.
   5. Free standing monument signs shall be regulated as follows:
      • Heights shall be limited to 6’ feet
      • Monument signs are not permitted in YCC or NMX zones.

6.10 General Parking Standards:
   Parking standards of City’s Zoning Code shall apply, with the following exceptions:
   1. Parking calculations shall be established by SU-2 zone.
   2. Pavement in parking areas shall be limited to required areas for parking, drive aisles and accessible access.
      All other areas shall be landscaped.
   3. Parking shall be screened by buildings or a combination of a 3’ high wall and a 4’ wide landscape strip.
   4. Bicycle spaces shall be required per City of Albuquerque Zoning Code with the exception that bicycle
      spaces may be provided at back or front of building.
   5. A 5’ clear paved path shall be maintained between building and parking areas for pedestrian access.

6.11 General Landscaping Standards:
   Landscape Standards of the City’s Zoning Code, Section 14-16-3-10, shall apply with the following exceptions:
   1. Landscaping Area Requirements. Due to the compact urban character of the area, the total landscape
      area required for each development shall be a minimum 10% of the net lot area.
   2. Usable open space in such forms as patios, plazas and courtyards shall have a minimum landscape area of
      15%.
   3. Standard Landscape Buffers:
      • Front Landscape Buffers: Where parking areas front on a public or private street, a minimum 4’ wide
        landscaped area with a 3’ high screen wall adjacent to the parking area shall be maintained between
        the parking area and the street, unless specified differently by zone.
      • Side/Rear: A minimum landscaped buffer 4’ wide with a minimum 3’ high screen wall adjacent to the
        parking area shall be required between parking areas and abutting R-1 zones. The landscape buffer
        shall be planted primarily with evergreen trees or tall shrubs capable of screening the parking area
        from the abutting residential zone, unless specified differently by zone.

6.12 Water Harvesting Areas:
   1. Surface runoff shall be directed into depressed, water collection areas located in parking lot landscape
      areas, landscape setback areas and patio or plaza areas where possible. The burden is on the applicant
      to demonstrate why water harvesting is not possible if water harvesting areas are not utilized.
7.0 Building Components

This section includes the permissible Building and Frontage Types. Building Types define the general spatial parameters of a building, while Building Frontages provide the requirements for a building’s “face.” Several Frontage Types may be used on the same Building Type where appropriate. Multiple Frontage Types may be used together such as a Patio and Cafe.

The Plan consists of five SU-2 zones which permit allowable Building and Frontage Types specific to each zone. Each new or modified structure within the Plan area shall comply with the standards of the Building Types and Frontage Types in this section.

Permissible Building and Frontage Types from this section shall comply with the requirements and guidelines specified by the regulating zones with regard to building envelope and placement, parking, landscaping and access.

### A. Urban Standard

**Description**  
The Urban Standard building type is a standard rectangular building found in urban areas. It has no side yard setbacks and meets the front build-to-line requirements. Building may have light wells or atriums. Light wells are permitted in the sideyard setback.

**Access and Entry**  
Units on street facade shall have their primary entry to the street. Interior units shall have direct access to the street at sidewalk elevation. Second story units shall not be accessed from an exterior balcony on a street facade.

**Landscaping**  
A minimum 1 tree and 3 shrubs per side court.

### B. Urban Garden

**Description**  
The Urban Garden building type allows access to individual units along the side(s) of a building via side entry courts. Each entry court shall have access to the street.

**Access and Entry**  
Units on street facade shall have their primary entry to the street. Other units may be accessed from interior courts. Side courts shall be accessed from street and shall be no wider than 12'. Side courts may also access rear parking. Second story units shall not be accessed from an exterior balcony.

### C. Urban Park

**Description**  
The Urban Park building type allows access to individual units along the front and side(s) of a building via an open park area the depth of the building. Park area shall be open to the public and screening shall be provided in front of any parking areas.

**Access and Entry**  
Units on street facade shall have their primary entry to the street. Other access to ground level units may be from park. Second story units shall not be accessed from an exterior balcony.

**Landscaping**  
Open space provided in the park shall be landscaped with trees. One tree shall be required for every 200 sf of park space. Areas not dedicated to pedestrian activity shall be landscaped with shrubs and groundcover capable of achieving 50% living vegetative cover.

### D. Civic

**Description**  
The Civic building type allows for unique architectural expression for large public buildings such as museums, theaters, libraries, churches, schools, and convention centers with outdoor spaces for public gathering. Civic buildings shall have public open space consisting of a minimum of 10% of lot area for public gathering.

**Access and Entry**  
Civic building types shall have at least one primary entry on a street or a public open space along a street.

**Landscaping**  
Open areas surrounding Civic building type shall be landscaped to provide for pedestrian comfort. 50% of areas dedicated to open space shall be shaded. Landscaping with shrubs and groundcovers shall be provided in open areas not dedicated to pedestrian activity.
### 7.1 Building Types

**E. Courtyard**
- **Description:** The Courtyard building type is a building which has an interior court(s) that opens to the street. Court depth shall not exceed court width.
- **Access and Entry:** The primary entry to each individual unit on the ground floor shall be on a street facade or Courtyard facade and shall have direct access to the street or Court from the sidewalk elevation. Second story units may not be accessed from an exterior balcony.
- **Articulation:** Street walls up to 5’ high are permitted at court. Views into court shall be provided.
- **Landscaping:** A minimum of 1 tree and 3 shrubs or groundcovers per 250 sqft.

**F. Liner**
- **Description:** The Liner building type has the specific purpose of screening or wrapping a parking area, a big box structure or an existing building. A liner building shall wrap at least 75% of the structure it is screening.
- **Access and Entry:** The primary entry to each individual unit on the ground floor shall have direct access to the street from the sidewalk elevation. Second story units may not be accessed from an exterior balcony.

**G. Lined Parking Structure**
- **Description:** The Lined Parking Structure is a multi-level parking structure in which at least the ground level street frontage consists of commercial or residential units. Vehicle parking on upper levels shall be screened from the street.
- **Access and Entry:** Units on street facade shall have their primary entry to the street. Vehicular access to parking is permitted.

**H. Live/Work**
- **Description:** Live/Work building types are low rise multi-story buildings that can be used flexibly for work/live, work/work purposes. A variety of uses in the buildings is encouraged. Dwelling units can be located above the ground floor or attached to the rear of a Store Front. At least the front third of the ground level of the building shall be dedicated to commercial/office activity.
- **Access and Entry:** Each Live/Work unit shall have a primary entry to the street.
- **Articulation:** Live/Work shall have Store Fronts or Portals.
- **Building Width:** Live/Work buildings facing a public street shall not be wider than forty feet (40’).
CHAPTER THREE
REGULATORY

7.1 BUILDING TYPES

I. Terrace Apartments

Description:
Terrace Apartments are a multiple unit building type of at least two stories in which each unit has an exterior primary entry. Access may consist of common or individual exterior stairs.

Access and Entry:
Each individual unit shall have its own entry to the outdoors.

Articulation:
Each unit shall include a covered Stoop, Porch or Portal.

J. Stacked Flats

Description:
Stacked Flats are a multiple unit building type of at least two stories in which the primary entry to all units is common. Access to individual units is via interior circulation.

Access and Entry:
The primary entry to the building shall be via covered Stoop or Porch and shall face the street.

Articulation:
Each building shall include a covered Stoop, Porch or Patio or Portal on the entry facade.

K. Courtyard Apartments

Description:
Courtyard Apartments are a multiple unit type consisting of units that are arrayed to form a shared courtyard that is partly or wholly open to the street.

Access and Entry:
The primary entry to each unit shall have direct access from a Porch, Portal or Stoop facing the Court or street.

Articulation:
The courtyard shall have a common street entrance.

Articulation:
Each entry shall include a covered Stoop, Porch, Patio or Portal. Porches, Patios, Portals and covered Stoops may protrude into the Courtyard space.

Landscaping:
Courtyards shall be landscaped with at least one tree for every 500 sf of courtyard area.

Street walls up to 5’ high are permitted at court. Views into court shall be provided.

L. Row House

Description:
A Row House building type consists of at least four attached units divided from each other by common walls. Each unit shall have a separate entrance.

Access and Entry:
Access to each unit shall be via Stoop, Porch or Patio fronting the street.

Articulation:
Each unit shall include a Stoop, Porch or Patio on the street facade.

Articulation:
Each unit shall be individually articulated.
## 7.1 Building Types

<table>
<thead>
<tr>
<th>Type</th>

<th>Articulation</th>
<th>Landscaping</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>M. Sideyard Row</strong></td>
<td>Sideyard Row is a multiple unit building type which consists of one or two story attached units divided from each other by common walls that front a side yard. Each unit shall have a separate entrance leading directly to the outdoors at ground level. Sideyard width shall be equal to at least 10’</td>
<td>A primary entry to each unit shall have direct access via a Stoop, Porch, Portal or Patio.</td>
<td>Each unit shall include a Stoop, Porch, Portal or Patio on the entry facade.</td>
<td>Courts shall have a min. landscape area of 1 tree and 5 shrubs per 200 sqft net lot area.</td>
</tr>
<tr>
<td><strong>N. Duplex, Triplex, Fourplex</strong></td>
<td>Duplex, Triplex, Fourplex are multiple unit building type that are architecturally presented as a single family house or duplex consistent with their typical neighborhood setting.</td>
<td>A primary entry to each unit shall have direct access from a Porch, Portal or Stoop or Patio. At least one primary entry shall front the street.</td>
<td>Each unit shall include a Stoop, Porch, Portal or Patio on the entry facade.</td>
<td></td>
</tr>
<tr>
<td><strong>O. Casita Courts</strong></td>
<td>Casita Courts are small detached units which share a common lot and interior court.</td>
<td>The primary entry to each unit shall have direct access from a Porch, Portal, Patio or Stoop. The common court shall be visible from the street.</td>
<td>Each unit shall include a covered Stoop, Porch, Portal or Patio on the entry facade.</td>
<td></td>
</tr>
</tbody>
</table>
P. Patio House

**Description:**
A Patio House building type is a small unit which may share a wall with another Patio House. Each Patio House has access to outdoor patios which do not extend beyond the building walls.

**Access and Entry:**
Access to each Patio House shall be via a Patio, Portal, or Porch.

**Articulation:**
Each dwelling shall include at least two patios: a Porch or Patio on the entry facade and a secondary patio/court with a minimum area of 100 sqft. Each Patio House shall be articulated as an individual unit.

Q. Single Family House

**Description:**
A Single Family House building type is an independent dwelling unit with a usable front yard and rear yard.

**Access and Entry:**
Access to a single family type shall be via a Patio, Portal, Porch or Stoop from a street.

**Articulation:**
Each unit shall include a Stoop, Porch or Patio on the entry facade. A Stoop, Porch or Patio may encroach into front yard setback. A garage shall be set back at least 10' from the front of the dwelling.

R. Accessory Building

**Description:**
An Accessory Building type is a secondary structure at the rear of a lot. It may consist of a garage, a garage with a residence or office above, an apartment, or separate office/shop.

**Access and Entry:**
Access to an Accessory Building type shall be via the alley or side drive.

**Articulation:**
No specific Frontage Type is required for an Accessory Building.
A. Cafe:
A Cafe frontage may be set back an additional 10’ from the build-to-line to accommodate outdoor seating. This frontage is appropriate for cafes, bars, and restaurants. A minimum of 50% of the ground floor street facade width shall have transparent glazing, to a height of at least eight feet (8’) above finish floor level. Cafe frontages may include garage doors and bi-fold doors which are not required to meet minimum sill heights. 75% of a Cafe frontage shall include a shading element or portal. A primary entry shall front a public street.

B. Department Store:
A Department Store frontage is appropriate for a large scale retail environment which occupies two or more floors of a building. At least one primary entry has access to the street. Glazing may be continuous or in a series of display windows on the ground level. 40% of the ground level street facade shall have transparent glazing up to a height of at least 8’ above finished floor. 75% of building frontage shall include a shading device or portal.

C. Lobby:
A Lobby is a ground level vestibule and waiting area for upper story uses, either commercial or residential. A Lobby frontage is required to have a primary entry to the street at street level. It is recommended, but not required to have fenestration on the street facade. 75% of the Lobby frontage shall include a shading device or portal. A Lobby frontage is limited to 40 LF.

D. Office:
An Office frontage has a primary entry at sidewalk level. A minimum of 40% of the ground facade width shall be glazed to a height of at least eight feet (8’) above finish floor level. 75% of an Office frontage shall include a shading device or portal.

E. Hotel:
A Hotel frontage provides primary entry access to a hotel lobby from a street. If on a secondary street, the frontage may consist of a Forecourt for pedestrian loading. A minimum of 40% of the ground facade shall include clear glazing. Sill height shall be between 8” and 36”. A Hotel frontage shall be used in conjunction with a Porch, covered Stoop, Portal or Patio and may include Store Front frontages.
F. **Patio:**
A Patio is an outdoor space generally used for dining or recreation that often adjoins a residence and is typically paved. It may refer to a paved area between a residence and the garden. A patio shall be a minimum of 50 sqft. Walls enclosing a patio on a street façade shall be limited to 48” high.

G. **Porch:**
A Porch is a covered structure attached to a building, forming a covered entrance to a vestibule or doorway. It is external to the walls of the main building proper, but may be enclosed by screen. A porch shall be at least 5’ deep.

H. **Portal:**
A Portal (arcade) is a passage or walkway covered over by a succession of arches or vaults supported by columns. A balcony may sit above the portal.

I. **Store Front:**
A Store Front is placed at or close to the build to line, with a primary entry at sidewalk grade. It may be set back up to 10’ in areas to create an entrance for outdoor sales or for building articulation. An awning or building overhang which encroaches over the sidewalk to provide pedestrian shade is required. A minimum of 75% of the ground facade width shall have clear glazing to a height of at least eight feet (8’) above finish floor level. Sills shall be between eight (8”) and thirty inches (30”) above the fronting sidewalk elevation. Window screens (including security devices) shall be located on the interior of the window.

J. **Stoop:**
A Stoop is a frontage with the first story elevated from the sidewalk sufficiently to secure privacy for the windows. The entrance is an exterior stair and landing and may be covered by an overhang, awning or canopy. The stair may be perpendicular or parallel to the sidewalk. This type is recommended for ground-floor residential and shall be accompanied by a ramp for commercial uses.

K. **Court:**
An uncovered area partly or wholly enclosed by buildings or walls.
CHAPTER FOUR

Plan Implementation: Transportation
Figure 32: Plan of Overall Transportation Improvements
1.0 INTRODUCTION
This chapter adopts changes to the South Yale Sector Plan area transportation system in order to address the needs of the changing community, including new commercial/mixed-use development along Yale Boulevard and the growing traffic and pedestrian conflicts along Cesar Chavez and Gibson, and within the residential neighborhoods.

1.1 Great Streets
While many factors contribute to the success of urban areas, great streets are often the primary building block for that success. Creating a great street requires integrating many elements, including:

Enhanced Streetscape
A well designed streetscape unifies an area by using urban and landscape elements such as street furniture and lighting, street trees and landscaping to create a street environment that provides pedestrian comfort and supports a thriving urban neighborhood.

Public Amenities
Public amenities provide opportunities for public art, shade and pedestrian oriented furnishings while wide sidewalks allow for ease of pedestrian movement and suggest the importance of the pedestrian experience.

On-street Parking
On-street parking supports sidewalk activity and buffers pedestrians from vehicular traffic.

Transit
Street design concepts anticipate the modern street car route along Yale and provides for future park and ride facilities. Existing transit stops are enhanced so that they are more noticeable, comfortable and integrated into the area’s overall community identity and wayfinding system.

Wayfinding/Signage
The distinct destinations both within and nearby the South Yale Area require a comprehensive wayfinding program to convey directional and informational assistance to area visitors, workers, residents and thru-travelers. Wayfinding elements provide for clear and easy area orientation and support a cohesive and unified South Yale identity.
2.0 STREET DESIGN: PUBLIC REALM

The transformation into a Great Street occurs through improvements to the two zones which form the public realm of the street: The Pedestrian Realm and the Roadway Realm.

2.1 The Pedestrian Realm

The area of the street dedicated to pedestrian use which may contain the following areas:

1. Building Amenity Zone
   This is the area adjacent to the Build-to-Line that may be used to provide pedestrian amenities that stimulate street activity such as restaurant service, retail, seating, fountains and art.

2. Pedestrian Walk
   This zone describes the area dedicated to pedestrian circulation that must remain clear at all times.

3. Street Amenity Zone
   This zone is the area adjacent to the back of curb dedicated to street furnishings, bike racks, landscaping, telephones, information centers, lighting, signage and transit facilities.

2.2 The Roadway Realm

The area of the street dedicated to vehicular use which may contain the following areas:

1. On-Street Parking
   This area allows for parallel parking along the street frontage to provide convenience parking to serve retail, office and residential uses and buffer pedestrians from traffic. This area also provides locations for bulbouts for future Modern Street Car transit stops, and landscape to enhance the Pedestrian Zone and calm traffic by reducing overall street width and pedestrian crossing distances at intersections.

2. Travel Lanes
   This zone describes the design and function of the vehicular travel lanes. This Plan establishes narrower street widths on some streets to reduce speeds and to allow space within the ROW for on-street parking. Corner curb radii may be reduced in bulbouts in order to assure safe pedestrian crossings and reduce pedestrian crossing distances. Bicycle lanes may not be permitted in travel lanes on some streets.
3.0 STREET DESIGN: YALE BOULEVARD
The following standards for Yale Boulevard are organized into two categories: 1) general standards for the length of Yale Boulevard from St. Cyr to Gibson Boulevard, and 2) specific standards for the three distinct sections that characterize south Yale Boulevard between St. Cyr and Gibson. The standards guide and modify the design of Yale Boulevard in order to support abutting pedestrian-friendly commercial redevelopment while continuing to accommodate area transportation needs, including the introduction of the modern streetcar. All proposed improvements preserve existing curb locations and existing right of way dimensions.

3.1 General Street Design Standards for Yale Boulevard (St. Cyr to Gibson)
The following standards apply to the length of Yale Boulevard within the Sector Plan area.

3.1.1 General Yale Pedestrian Realm Standards (St. Cyr to Gibson)
The intent of the Pedestrian Realm guidelines is to create an attractive neighborhood retail setting which provides shade and comfort, buffers the pedestrian zone from the roadway realm and supports a unique South Yale identity through landscape, wayfinding and public art.

A. Sidewalk Widths
Intent: To ensure a safe, comfortable and attractive pedestrian walk.

Standards
Sidewalk width shall be dictated by street section. A clear pedestrian path of 6 feet shall be maintained at all times. Sidewalks shall be a hard surface which may include concrete, brick, or pavers. Sidewalk material shall be slip resistant and of a permanent nature. Sidewalks are required to maintain ADA standards and have a 2% cross slope for drainage.

B. Streetscape Landscaping
Intent: To create an attractive streetscape which provides shade and comfort, and supports a unique South Yale identity through plant selection.

Standards
Location: Street trees shall be located 25’-30’ on center on Yale Boulevard and side streets. Street trees shall be located in tree wells of a minimum 32 sf. Tree grates shall be required along Yale Boulevard due to limited sidewalk widths.

Species variation: A single or alternating species of tree shall be provided along Yale Boulevard within the pedestrian zone. Along side streets, alternating species distinct from those selected for Yale Boulevard shall be provided. All street trees shall be of a non-coniferous species. See Appendix for plant list.

Plant palette: A high desert plant palette that is water conservative, provides for shade and year-round visual interest shall be installed. See Appendix for plant list.

Plant size:
Trees
Single trunk trees shall have a minimum caliper of 2”
Multi-trunk trees shall have a minimum container size of 24” box

Shrubs and Accents
Native shrubs shall have a minimum container size of 1 gallon
Non-native shrubs shall have a minimum container size of 2 gallons

Perennials/Grasses
All grasses shall have a minimum container size of 1 gallon.
C. **Lighting**

**Intent:** To provide streetscape lighting that provides for a safe, comfortable and attractive environment that encourages nighttime use.

**Standards**
- **Location:** Pedestrian street lights shall be located in the street amenity zone.
- **Height:** Street lights shall be 13-16 feet in height.
- **Spacing:** Streetlights shall be located every 50-60 feet.
- **Dark Skies:** Light fixtures will be selected for conformity with the State’s Dark Skies ordinance.

D. **Street Furniture**

**Intent:** Street furniture consists of seating, bus shelters, trash receptacles, kiosks, and other pedestrian amenities which are located within the pedestrian zone. They provide comfort for the pedestrian and through the repetition of similar elements, an order to the street.

**Standards**
- Street furniture shall be located at landscape bulbouts or within the street amenity zone, and include benches, waste receptacles, transit shelters and bike racks.
- Street furniture should have a simple, contemporary design.
- Street furniture shall be consistent in design and material.

3.1.2 **General Yale Roadway Realm Standards (St. Cyr to Gibson)**

The intent of the Yale Boulevard vehicular zone standards is to allow travel similar to conventional street design and maintain existing capacity, while placing an emphasis on pedestrian safety and comfort. Drivers will be expected to proceed carefully with an occasional stop to allow for pedestrian crossings at designated crosswalks, or to allow another car to park or a bus to stop. The character of the street should make drivers uncomfortable exceeding design speeds due to the presence of parked cars, transit stops, tighter turning radii, and other design elements. These standards supersede any conflicting standards in the DPM or other land development or engineering regulations of CABQ or Bernalillo County.

A. **Articulated Crosswalks**

**Intent:** To provide safe crossings for pedestrians at intersections and at mid-block crossings.

**Standards**
- Crosswalks shall be clearly delineated and legible to pedestrians and motorists. Use of alternative paving or imprinting material is recommended.

B. **Posted Travel Speed**

**Intent:** To slow traffic and consolidate varying posted speeds.

**Standards**
- Posted speed shall be reduced to 25 mph between Cesar Chavez and Ross.
- Posted speed shall be reduced to 30 mph between Ross and Gibson.
3.2 Section Specific Standards for Yale Street Design

The following standards address the three distinct sections which make up the length of Yale Boulevard within the Plan area: St. Cyr to Cesar Chavez, Cesar Chavez to Ross, and Ross to Gibson. These sections are characterized by their distinct development patterns and varying rights of way, from 60' at St. Cyr to over 100' at Gibson.

3.2.1 Yale Street Design: St. Cyr to Cesar Chavez

This length of Yale Boulevard represents the transition area from the mixed-use residential neighborhoods to the north to the proposed neighborhood retail redevelopment of South Yale. The right of way varies in this length of Yale, from 60' at St. Cyr with a 40' curb to curb width, to 81' with a 60' curb to curb width at Cesar Chavez. No changes to the street section are proposed between Bell and St. Cyr due to the long term plans of the Transit Center and its need for safe and efficient bus movements on and off the street. From north of Cesar Chavez to Bell Street the Plan proposes introducing on-street parking and landscape improvements in order to enhance pedestrian connectivity and to unify the length of the Yale Boulevard streetscape.

A. Street Section

Intent: To enhance connectivity from the mixed-use residential and University areas to the north to the neighborhood commercial area beginning at Cesar Chavez, to unify the length of the commercial corridor and provide additional on-street parking.

Standards

The following street section shall be adopted between Bell and Cesar Chavez:

Figure 35: South Yale Section
3.2.2 Yale Street Design: Avenida Cesar Chavez to Ross
This length of Yale Boulevard is located in the center of South Yale’s neighborhood commercial node. The right of way varies in this section between 81 and 83 feet. The curb to curb width throughout this section is 60'. It is the purpose of the following street design modifications, including curb extensions, landscaped parking lane bulbouts, reduced vehicular travel lane widths and transit bulbouts to establish the building blocks for a pedestrian friendly neighborhood retail environment.

A. Street Section
Intent: To provide street design that buffers pedestrians from traffic and allows for increased landscaping and streetscape improvements commensurate with a thriving pedestrian environment.

Standards
Adopt the following street section between Cesar Chavez and Ross:

B. Parking Lane Bulbouts
Intent: To narrow the sense of street width, increase pedestrian realm, calm traffic and create additional opportunities for landscape improvements.

Standards
An 8 foot wide by 18-20' long bulbout shall be provided every four or five parking spaces in the parking lane. These bulbouts shall be landscaped and may contain street furniture.

Parking lane bulbouts and bulbouts at intersections shall be modified to accommodate transit stops where necessary.

Bus and future modern street car stops should be consolidated into the same stop location so as not to lose precious on-street parking.

C. Curb extensions at all intersections
Intent: To reduce pedestrian crossing distances at intersections, calm traffic at intersections and create outdoor plaza space.

Standards
An 8’ wide by a minimum 20’ long curb extension with landscape area shall be provided at all intersections along Yale Blvd.

Corner radii of curb extensions shall be set to 15’-20’.
D. Lot Access Restrictions
Intent: To provide a safe, comfortable walking experience and to limit pedestrian and vehicular conflicts.

**Standards**
Lot access shall be regulated as follows:

1. Existing curb cuts may remain until a continuous rear access easement (alley) is available. No more than one curb cut per parcel is permitted.

2. New curb cuts along Yale Boulevard shall be regulated as follows:
   - Upon redevelopment of a property, if a rear access easement (alley) is not available and new drive access from Yale is required to access the property, an 18’ wide access lane may be provided at the side property line. One access drive to Yale is permitted per parcel. The side drive location will allow for shared side drive opportunities.
   - For corner parcels, no new curb cuts are permitted from Yale Boulevard. Drive access shall be limited to the side street location where curb cuts shall be sited within 20’ of the rear property line at the future rear drive aisle location.

3. All new and existing drive pads along Yale Boulevard shall be modified to ensure a 6’ wide area that is level with the connecting sidewalk along Yale.

4. All parcels shall preserve an area 20’ deep, measured from the rear property line, for a future rear access drive easement (see YCC Zone, Lot Access).

E. Mid-block Access Drive
Intent: Due to the long length of blocks along Yale (600’) a mid-block access drive is encouraged to access the rear alley or rear of lots.

**Guideline**
Timing of Construction: A mid-block access drive should be provided 250-300 feet from either end of the block. If there are potentially multiple parcels affected by this requirement, developers of affected parcels may elect or refuse to build access aisle on a first-come basis. However, the last parcel affected by this requirement should be required to build the aisle if it has not been constructed previously.

The mid-block access drive shall be 18’ wide. A 5’ sidewalk shall be provided on either side of the drive aisle.

F. Intersection Design: Yale at Kathryn
Intent: To improve pedestrian and vehicular safety by clarifying vehicular stops, and reduce neighborhood impact of UNM Shuttle and event traffic.

**Standards**
Relocate southbound signal and crosswalk location to the north side of Kathryn.

G. Yale side street on-street parking
Intent: To provide additional parking and activate side streets up to alley.

**Standards**
On-street parking shall be provided with the following improvements:

1. On-street parking on Kathryn, Ross, Anderson and Southern.
2. Street trees shall be provided every 25’.
3.2.3 Yale Street Design: Ross to Gibson
This section of Yale Boulevard represents a transition area from the urban neighborhood between Cesar Chavez and Ross to the more vehicular-oriented environment at Gibson. The intent of the following standards is to provide a pleasant pedestrian experience and orient visitors in a hotel/office park environment.

A. Street Section: Ross to International
Intent: To provide street design that supports a visual transition from the vehicular-oriented boulevard to a pedestrian-oriented boulevard north of Ross.

Standards
Adopt the following street section between Ross and International.

B. Gateway at Ross and Yale
Intent: To mitigate off-set intersection, facilitate pedestrian and vehicular crossing and provide a gateway opportunity/identity piece/visual node while slowing northbound traffic.

Standards
Create gateway experience through the introduction of a gateway element in the median south of Ross and at the curb bulb-outs at the intersection.

C. Street Section: International to Gibson
Intent: To provide a transition from the vehicular-oriented Gibson intersection to the pedestrian-oriented south Yale, provide aesthetic improvements which tie the Yale corridor together, create a visually pleasant driving and walking environment and reduce traffic speeds through narrow lane widths.

Standards
Adopt the following street section between International and Gibson:
4.0 OTHER PLAN AREA STREET IMPROVEMENTS
In addition to streetscape improvements prescribed for the south Yale Boulevard, the following improvements are also identified to enhance pedestrian connectivity and overall streetscape aesthetics in the area.

4.1 Avenida Cesar Chavez Improvements
Avenida Cesar Chavez between University and Yale Boulevard is the primary street connecting the City’s and UNM’s sports and entertainment venues to the South Yale Corridor. Despite the street’s status as a gateway to the these venues and its popular use as a pedestrian corridor during game day events, Cesar Chavez is lacking in the basic streetscape improvements that create not only a visually pleasing, comfortable and safe walking and driving environment, but an overall sense of the area’s destinations.

A. Streetscape Landscape
Intent: To introduce landscape improvements which unify the area, create a sense of place and foster a more pleasant walking experience, with shade and buffering from vehicular traffic.

Standards
Introduce street trees and understory plantings in landscape strips along curb side of sidewalk along the length of both sides of Cesar Chavez.

Adopt the median landscape design utilized on University at Cesar Chavez in the medians on Cesar Chavez.

B. Pedestrian Safety
Intent: To reduce the vehicular/pedestrian conflicts by providing clear and safe pedestrian circulation routes by further controlling vehicular traffic and consolidating pedestrian movement.

Standards
Incorporate barriers in medians to control pedestrian crossings by limiting them to designated points. Barrier design shall enhance the streetscape, contribute to area identity and provide opportunities for public art.

Create four distinct pedestrian crossing areas to serve venues. (See plan below.) Widths and paving materials of crosswalks shall suggest the importance of pedestrian over vehicular movement.

Provide pedestrian refuges at medians to enhance pedestrian safety and slow turning traffic.

Provide a signalized intersection at Buena Vista and Cesar Chavez to slow traffic and improve north-south pedestrian connectivity and vehicular crossing.

Provide pedestrian scale lighting along Cesar Chavez.

Complete the sidewalk and landscaping along the north side of Cesar Chavez.

Figure 38: Cesar Chavez Improvements
4.2 Gibson Boulevard Improvements

Gibson Boulevard is a six to eight lane limited access principal arterial. While it may move vehicles efficiently, the width of its right-of-way and the excessive speeds of vehicular traffic, make for extremely difficult and uncomfortable pedestrian crossings. Aesthetically and physically connecting the Yale corridor across Gibson is an important component of the area’s redevelopment. To encourage pedestrian crossings and to develop a more pedestrian accessible and visually pleasing environment, this Plan recommends streetscape and pedestrian safety improvements at the Gibson intersections to reduce the massive scale of the roadway and enhance pedestrian connectivity.

A. Pedestrian Refuges at University, Yale and Girard

Intent: To improve pedestrian connectivity and pedestrian safety across Gibson Boulevard and reduce pedestrian/vehicular conflicts. Refuges enable pedestrians to focus on crossing each direction of traffic separately and provide a safe place in the middle of the street to wait. Refuges provide for a better view of oncoming traffic and allow motorists to clearly see pedestrians.

Standards
Where possible, triangular refuge islands shall be placed adjacent to free-right turn lanes to separate right-turning vehicles from through lanes and to provide a refuge for pedestrians to cross the free-right lane before crossing the through lanes.

Median refuges shall be provided to lessen the crossing distance and provide islands to physically separate the pedestrian from traffic.

B. Median Improvements

Intent: To create an intersection environment that is visually pleasing and inviting to the crossing pedestrian and motorists, and which provides sense of place.

Standards
Provide landscape improvements in unimproved Gibson medians.

4.3 Girard Avenue Improvements

Girard Boulevard is a designated collector street whose primary function is to serve the residential neighborhoods which border it. It is a two lane street which widens to accommodate four lanes between Thaxton and Gibson.

A. Streetscape Improvements

Intent: To enhance commercial node at Gibson and provide for an attractive gateway into the residential neighborhoods.

Standards
Widen and landscape existing median.
Provide street trees along Girard, from Gibson to Vail.

B. Posted Speed

Intent: To reduce vehicular speed into residential neighborhood.

Standards
Reduce posted travel speeds along Girard to 30 mph.

C. Reduced Travel Lane Width

Intent: To reduce vehicular speed into residential neighborhood.

Standards
Reduce travel lane width to 10 feet wide.

Where a lane incorporates a bike lane, stripe bike lane.
4.4 Wilmoore and Buena Vista Improvements
Wilmoore and Buena Vista are residential streets which extend from Gibson to Cesar Chavez. Due to their location in close proximity to UNM and City’s venues, these streets are frequently used by significant numbers of thru-travelers. Through improvements which tighten vehicular lane widths at intersections, much of this thru-traffic, as well as future traffic generated by the Yale corridor redevelopment, will be deterred from using these residential streets.

A. Intersections along Wilmoore and Buena Vista
Intent: To reduce speed and discourage through traffic in residential areas and facilitate pedestrian access to Yale.

Standards
Enhance four-way stops with landscaped curb extensions at all intersections (between Cesar Chavez and Gibson)

Introduce four-way stops at all intersections along Wilmore and Buena Vista.

Align striping on Wilmoore and provide curb and gutter on entire length of Wilmoore.

4.5 Area Street Signage/Wayfinding
The South Yale area’s unique location -- along a major transportation corridor, between the airport, UNM, Nob Hill and Downtown -- warrants a comprehensive wayfinding program which will clearly and easily guide visitors, residents, pass-through travelers and airport hotel guest to significant area destinations.

A. Wayfinding Program
A wayfinding program should be developed for the area as part of the area’s overall redevelopment strategy. Wayfinding signage should present information in a logical sequence, and should have an appropriate level of detail at appropriate locations. It should be distinct, uniform in graphic design and materials and in scale to a pedestrian friendly environment. Signage should enhance the local community identity without adding unnecessary visual clutter.

The Wayfinding program should incorporate the following signage for the area:

Directional signage
Directional signage shall be used to identify connections to important destinations and to signify arrival and include:

- Smaller, more frequent signs to provide directions to facilities, schools, parking, UNM, Parks, CNM Library, etc.
- Larger and more prominent signs to signify arrival/proximity to a place (UNM, Veloport, South Yale Corridor).

Regulatory Signs
Street signs that regulate traffic and parking, including parking hours and transit locations.

Informational Signs
Pedestrian oriented signs that include interpretive signs and location directories. Content can include, images, maps and text.
5.0 TRANSIT
Transit plays a vital role in the South Yale area. Yale, Gibson, University, Cesar Chavez and Kathryn are currently designated transit routes. In addition, the UNM Shuttle services the area sports facilities, housing and south campus parking. Improving transit service to the area and providing services and housing with easy access to transit is vital to the redevelopment of the area.

5.1 Transit Network
The following recommendations have been made to enhance the existing transit network:

1. Increase bus frequency along Yale to 15 minute intervals.
2. Increase length of bus service during the day.
3. Increase bus service on Sunday.
4. Increase evening and early morning service to the Sunport.

5.2 Transit Stops
Transit stops should be designed to provide comfort and safety to riders and contribute aesthetically to the streetscape. The following recommendations have been made to improve the existing transit stops:

1. Lighted shelters with seating should be provided at all stops.
2. Transit stops shall be ADA accessible.
3. Transit stops should incorporate area wayfinding signage where possible.
4. The design of transit shelters should contribute to the area’s local identity.

5.3 Long Range Transit Plan: The Modern Streetcar
The City’s Modern Streetcar project has been in planning since 1999, when it was initially envisioned as a light rail system. Unlike light rail, streetcar systems cost substantially less and are designed for local, shorter trips with slower speeds and more frequent stations. Streetcars are able to share a lane with automobiles, allowing them to fit into a lane of traffic without altering traffic flow. Because the streetcar flows with the traffic, like a bus, and is subject to the same traffic signals as other vehicles, it operates safely in high-pedestrian areas.

University Boulevard, Cesar Chavez Boulevard, and Yale Boulevard have been designated as part of the future modern streetcar routing. The routing was selected because of its proximity to multiple sports related venues, the availability of underutilized land along Yale Boulevard with significant redevelopment potential, and for the nearby park and ride facilities including the UNM student parking lots and the Loma Linda Community Center.

Within the Plan area, proposed stops identified in a 2006 Stop Study Report are located approximately ¼ mile apart and occur along Cesar Chavez at University, at the UNM Football stadium and at the Veloport. Along Yale Boulevard, stops are located at Cesar Chavez, Kathryn and north of Gibson. A potential stop was also identified at Ross. Streetcar stops will occur at bulbouts equal in length to about 2-3 parking spaces. Stops are programmed to include: benches, shelter/canopy, platforms, bike racks, trash cans, landscaping, and public art.

The Yale Boulevard design improvements proposed by the Plan take into consideration the improvements required to support the Modern Street Car including maintaining usable lane widths, turning radii and designated loading platforms at bulbouts.

After further study of streetscape and proposed development patterns, as well as the proximity to the potential shared parking facilities at Loma Linda Com-
munity Center, the following modifications to the Stop Study Report are proposed:

1. Consolidate proposed Ross and Kathryn northbound stops at Loma Linda Community Center.
2. Consolidate proposed Ross and Kathryn southbound stops at Anderson.

5.4 Shared Parking Opportunities/Park and Ride
The City-owned Loma Linda Community Center and the BMX/Veloport facility provide opportunities for shared parking. They can absorb overflow parking in the area as it redevelops, providing relief to area residents and ease of parking access for area visitors. Future parking structures can also provide joint-parking opportunities for area events and daily commuter parking needs as well as provide parking for local area businesses.

6.0 BICYCLE AND PEDESTRIAN TRAIL NETWORK
Intent: To increase connectivity in the South Yale area through the development of a comprehensive bicycle and pedestrian trail network.

The Bicycle and Pedestrian Trail Network Plan (see Page 76 for map) depicts a network of on-street bicycle lanes and routes combined with an off-street walking/bicycle trail system which utilizes existing area alleys, arroyos, pedestrian paths and access easements. Trail Network recommendations include:

1. Preserve existing area Bike Routes on Buena Vista, Columbia and Stanford and a Bike Lane along Gibson.
2. Development of existing access easements to Sunport Pool.
3. Development of pedestrian and bicycle connections for Ash and Mesa.
4. Development of pedestrian and bicycle connections along Geneva’s Arroyo.
5. Development of East-West pedestrian connections through UNM South Campus.
This page intentionally left blank.
CHAPTER FIVE

Plan Implementation: Projects
CHAPTER FIVE
Projects

1.0 INTRODUCTION
This section identifies key projects whose implementation would significantly advance the redevelopment of the area as envisioned by this Plan. The following project recommendations range from those which create the necessary impetus for redevelopment investment to those which improve the overall quality of life in the area by enhancing existing amenities. The projects are divided into two categories: those which are prioritized for City CIP funding and those which are general recommendations to be implemented by the community.

2.0 CIP PROJECTS
The following is a list of potential City CIP projects identified as part of the South Yale public planning process.

2.1 South Yale Streetscape Improvements
In order to create an environment that is pedestrian-friendly, attractive to retailers and visitors, and generally improves the aesthetic characteristics of the area, it is important to upgrade existing pedestrian infrastructure on south Yale Boulevard. The following improvements are recommended:

- **Streetscape Landscape** - Streetscape Landscape should provide shade, interest and definition to the pedestrian realm. Introduction of street trees in grates along the sidewalk spaced a minimum of 25 feet on center. New bulbouts and curb extensions should be landscaped. Plant materials should follow recommended plant palette for this plan.

- **Street Furnishings** - Street Furnishings should add comfort for the pedestrian and character to the street. Street furnishing should be durable, consistent in material and design and secured permanently. Street furnishings should include trash containers, kiosks, transit shelters and public art.

- **Street Lights** - Street lights should add a comfortable level of light for pedestrians for safety and visibility. Street lights should be pedestrian in scale and oriented to light the sidewalk. Pedestrian lighting should follow lighting standards in this plan.

- **Curb extensions and bulbouts** - Curb extensions and bulbouts should reduce crossing times for pedestrians at intersections, provide refuges for transit stops, define street parking and create additional usable space in the pedestrian realm for street furnishings and landscaping. Curb extensions and bulbouts should be landscaped in an attractive manner.

- **Crosswalk articulation** - Crosswalks should be clearly legible by vehicular traffic as a defined space for the pedestrian.

- **Median and Streetscape Improvements south of Ross** - In order to improve the pedestrian and vehicular safety, improve area character and provide opportunities for gateway elements, a landscaped median should be introduced south of Ross on Yale. The median should be utilized for a linear public art piece which acts as a gateway to the South Yale area.

- **Street trees in grates** - Street trees in grates should be introduced in existing sidewalk areas along Yale Blvd. south of Ross.

2.2 Gateway at Yale and Ross and Gateway at Cesar Chavez
In order to define the pedestrian zone of South Yale, the intersections on Yale at Ross and Cesar Chavez should be improved as north and south gateways. Four way traffic signals should be introduced at both intersections to reduce traffic speed, improve pedestrian crossing safety and to provide a visual cue to the entrance to a pedestrian zone. Intersections should include bulb-outs to increase pedestrian safety and reduce crossing times and should include public art elements which act as a gateway to the South Yale area.

2.3 Loma Linda Master Plan Update
Loma Linda Community Center is a valuable community asset located in the heart of the south Yale Commercial Corridor. The existing master plan should be revisited and updated to assess the needs of the current community and to complete the original program of the community center to include a library, gym, and community garden, as well as the completion of the existing veterans' memorial. New program elements should be considered such as a dog park, skate park, and police substation which have been requested by the community. In addition, the existing alley should be incorporated as part of a larger community trail system connecting the community center to Sunport Pool to the south and the open space of Geneva's Arroyo.

A master plan update for Loma Linda Community Center should evaluate the potential of the community center as the heart of a pedestrian commercial corridor and its relationship to the street. Opportunities exist for community center land to be utilized for a Park and Ride facility or shared parking for community businesses and services. In addition, the community center land located adjacent to Yale could be developed at the street to mask parking areas, provide a
street wall and to create additional opportunities for area services. These structures could be used for community center program or leased as café and retail space to the public at a prime location adjacent to a park setting.

2.4 Cesar Chavez Improvements

Cesar Chavez between University Boulevard and Yale Boulevard is the site of heavy pedestrian traffic during area events and daily student traffic. Several designated crossing points should be introduced between major intersections in order to improve pedestrian safety and to reduce vehicular speed in the area. Existing medians should be improved to accommodate pedestrian refuges and should have well designed pedestrian barriers to controlling crossing points to designated areas. Pedestrian areas should be aesthetic and are opportunities for public art. Pedestrian street crossings should be well articulated and clearly visible to vehicular traffic.

In addition, to improve pedestrian mobility in the area, sidewalk areas along the north side of Cesar Chavez should be completed. New sidewalk area should include street trees and street furniture such as benches, kiosks and trash receptacles. Street trees should be introduced along existing sidewalks on Cesar Chavez to provide a buffer for pedestrians and improve the character of the street.

A new Intersection at Cesar Chavez and Buena Vista should be provided. Buena Vista is a designated north/south bike route and is heavily utilized by student and local traffic. In addition, the UNM south parking area is located on the south side of Cesar Chavez and thousands of students parking here daily to attend the University to the north. In addition to pedestrian and bicycle crossing needs, vehicular egress from the UNM south lot is forced to migrate through the south Yale residential areas due to difficulty crossing Cesar Chavez at Buena Vista. A Four way light is needed at this intersection to improve traffic flow, increase pedestrian safety and reduce impact of event traffic on area residents.

2.5 Gibson Improvements

Gibson Boulevard is a designated limited access roadway traffic travelling at high speeds and in high volumes. However, opportunities exist for improving pedestrian safety and comfort, making the south Yale area accessible to residents south of Gibson as well as airport hotel visitors. Pedestrian refuges are recommended in Gibson medians and at triangles adjacent to the right turns lanes, for the intersections at Yale and Girard. Refuges should be at minimum, large enough to accommodate a wheelchair or stroller with an accompanying pedestrian.

2.6 Wrapping the BMX facility

The community has expressed concern with the noise, air-quality, smell and visual impact of the BMX facility. In order to address these concerns, this plan recommends that the BMX facility be wrapped along Cesar Chavez and Buena Vista with pedestrian scale retail and residential buildings. The introduction of the new structures will provide additional opportunities for much needed housing and services in the area, provide a comfortable pedestrian street edge, and mask the scale of the structure.

2.7 Yale Rear Drive Aisle (alley) and Drainage Improvements

Should the City require rear drive aisles along the properties adjacent to Yale in order to improve area drainage and facilitate vehicular movement in the area, the standards in Chapter 4 are recommended as CIP projects. See also CIP project 2.12 Drainage Study.

2.8 Traffic Study

South Yale neighborhoods are heavily impacted by area event traffic and vehicular circulation moving through the area to access the freeway and airport. A study of traffic and parking problems is recommended as well as improved traffic coordination and security on event days.

2.9 Area Trail Improvements

In order to improve area pedestrian and bicycle connectivity in an area with limited access, the existing arroyo, alley east of Yale and the dead-end streets such as Mesa and Ash should be developed as part of a greater comprehensive pedestrian and bicycle trail system. In addition, pedestrian linkages should be developed to Centre Ave and to Loma Linda Community Center via the existing alley and dedicated easements between Kathryn and Ross. This path has the potential to be developed as an exercise trail or art trail which would provide much needed linking elements between Loma Linda Community Center and Sunport Pool.

2.10 Sunport Pool Improvements

The community has expressed a desire to see the existing infrastructure at Sunport pool improved to include rehabilitation of the existing tennis and basketball courts and improvements which would make the facility usable year rounds. In addition, access to and from the community should be improved through development of neighboring alleys and access easements.
CHAPTER FIVE
Projects

2.11 Residential Traffic Calming Projects
Event traffic heavily impacts the Clayton Heights neighborhood. Speeding and parking problems impact the daily lives of the residents with event parking on game days block access to driveways. This plan recommends the introduction of four-way stops at all intersection in the Clayton Heights neighborhood with bulbouts to slow vehicular movement and increase pedestrian safety. In addition, area residents have expressed concerns with the traffic circle at Santa Clara and Columbia which due to its small size frequently fails in calming traffic.

2.12 Drainage Study
There currently exists significant east-west grade changes on the commercial lots running along the west side of Yale Boulevard. These grade changes cause surface water to flow down onto adjacent residential properties, often flooding basements and yards. The lack of a comprehensive drainage solution will require individual commercial lot owners along Yale Boulevard to pond on-site, significantly limiting the development potential of these lots. A master drainage study should be conducted to facilitate the most cost effective and developmentally efficient drainage solution for the commercial parcels.

3.0 Non-CIP Projects
The following is a list of projects identified as part of the South Yale public planning process for the community to pursue with the appropriate City agency.

3.1 Permit Parking
Permit parking is recommended for the Clayton Heights neighborhood on an as needed basis to mitigate impact of event and UNM parking.

3.2 Transit Improvements
In order to improve access to transit in the south Yale area, this plan recommends an increase in the frequency of area transit service to 15 minute intervals and provides later service and Sunday service as the area develops. Extended service should be implemented to the airport and sporting venues.

The introduction of the Modern Streetcar would be an important component of the area’s redevelopment and should be pursued vigorously.
CHAPTER SIX
Area Character and Conditions
Figure 43: South Yale Sector Development Plan Area
1.0 Area Overview
The South Yale Sector Development Plan includes approximately 519 acres and generally covers the area north of Gibson Boulevard SE, east of University Boulevard, south of St. Cyr Ave. and generally west of Columbia Drive. The Plan’s boundary includes the Clayton Heights neighborhood on the west side of Yale Boulevard and a portion of the Victory Hills Neighborhood on the east. The area is within close proximity to UNM, Nob Hill, the Ridgecrest Neighborhoods, Downtown and the Albuquerque Sunport. The South Yale corridor is an important transportation route between the Sunport and the University of New Mexico area. Yet despite its strategic location, the area suffers from stagnant commercial development characterized by large areas of land with underutilized commercial zoning.

2.0 Public and Institutionally Held Land
The Plan area is unique in that it encompasses large areas of land held by public institutions and local government. Of the 519 acres contained within the Sector Plan, a combined 180 acres (35%) are held by the City of Albuquerque, the University of New Mexico, CNM and Albuquerque Public Schools.

2.1 University of New Mexico, South Campus
The University of New Mexico holds approximately 98 acres within the Plan area, which includes Family-Student housing on Buena Vista, the football stadium, soccer fields, indoor practice fields and associated parking lots. According to UNM’s South Campus Masterplan (See page 82 for more details on the masterplan) the University has plans to grow the existing football stadium, create a more campus-like atmosphere within the stadium and adjacent practice area and work to increase the safety for pedestrian circulation in the South Campus area.

2.2 Central New Mexico Community College (CNM)
A large portion, 15 acres, of CNM’s (formerly TVI) main campus also lies within the plan boundary. Approximately 20,000 students attend the main campus which has over 1,000 employees. CNM is in the process of expanding its campus and enrollment in the area. They recently acquired a portion of the City of Albuquerque Veloport property which has improved for student parking. The main campus will be undergoing a major master planning effort beginning in 2009.

2.3 City of Albuquerque
City of Albuquerque properties cover approximately 50 acres and include: Isotopes Park, home to the City’s Triple A Baseball team; the City Veloport which includes the new BMX facility and vacant land for a proposed Velodrome; the Yale Transit Facility; the Sunport Pool; and, the Loma Linda Community Center and Korean War Veteran Memorial Park located on the site of the former Cactus drive-in. The 14 acre site is also home to the City’s first 100% ADA accessible playground structure, the Korean War memorial and a community garden. Large portions of the community center land remain undeveloped with no proposed plans currently under consideration. The eastern portion of the site has environmental issues and an abandoned alley. Sunport Pool, located off Gibson and Columbia, was the City’s first public pool. In addition to an outdoor pool, the facility is in possession of tennis courts and basketball courts which are in need of renovation.

2.4 Albuquerque Public Schools
APS holds several parcels covering roughly 14 acres of land within the Plan area, including Lowell Elementary School which is currently close to capacity. In the next few years, Lowell will also be receiving children from the new Mesa del Sol development until their population warrants a new school on the Mesa.
Adjacent APS land is used for administrative use, storage, and parking. APS has plans to develop much of its vacant land in the area in order to expand the school. In addition, three APS charter schools are located at Ross and Yale: the Cesar Chavez Community School, a high school, provides afternoon & evening classes for non-traditional working students; La Resolana Leadership Academy, a junior high school, provides a mix of traditional and computer-assisted instruction; and, the Ralph J. Bunche Academy, a K-7 school, provides a multicultural curriculum based on strong parental support and community partnerships.

2.5 Community Concerns related to Event Venues

The large sports and entertainment related venues have both negative and positive impacts on South Yale neighborhoods and businesses. Large areas of land dedicated to parking have a strong physical influence on the area’s appearance, while parking by fans and tailgaters for UNM and City events overflows into the adjacent residential community, often wreaking traffic havoc. UNM game day activities have a strong impact on the neighboring residential areas, causing traffic congestion, illegal parking, excessive trash, and overnight camping and UNM’s park and shuttle service operates every 15 minutes daily on residential streets during the school year. The City’s BMX facility, which opened in 2006, has been received with mixed feelings by the community. Originally sited further to the west, residents state that the new location is noisy, introduces dirt and pollution into area homes.

At the same time, as one of Albuquerque’s primary sports and event venue locations, significant numbers of visitors come to the area on a regular basis, unleashing a still un-captured market of consumers for future retail and restaurant services. With continued City and UNM improvements and investment, the area should continue to draw significant populations.

3.0 Privately Held Land

3.1 Analysis of Residentially Zoned Land

The Sector Plan boundary includes a comparatively smaller area of residentially zoned land, roughly 150 acres comprised of approximately 50 acres of single family zoning and 100 acres of multifamily zoning. The residential areas consist primarily of the Clayton Heights neighborhood located on the west side of Yale which is mostly built out with 1950’s single family homes and a few multi-family apartments and the large multifamily parcels located along Santa Clara and at Gibson.

The housing in the Clayton Heights Neighborhood is mixed, with a larger portion of single-family residential, a smaller concentrated mix of parcels zoned R-2, R-3, RG, and RT on Wilmore and Sunshine Terrace, a mobile home park, University Village, zoned SU-1 Planned Residential Development and the large undeveloped SU-1 Planned Residential Development site at Gibson. The Gibson tracts received EPC site plan approval in 2006 for 240 du and a 1.7 acre retail component.

The majority of the Plan area’s single family residential land is developed, with a few vacant parcels located in the most southern block of Buena Vista Drive and some scattered lots along Sunshine Terrace Avenue. The majority of the residential development is located on narrow, deep lots, with the majority of the blocks oriented to the east/west. However, along Sunshine Terrace Avenue the orientation shifts to north/south. A subdivision adjacent to University Blvd., Lomas Del Cielo, built in the 1980’s, is developed in a cul-de-sac form. The community has voiced concerns about the upkeep of properties, particularly related to landscaping and walls, as well as front yards being used as driveways despite the City’s ordinance banning such use.

Only a small portion of the Victory Hills residential neighborhood lies within the designated boundary and is primarily multi-family. A small development adjacent to Loma Linda Community Center consists of a single street of duplexes on
land zoned C-1 and O-1. An older, multi-family housing complex on 30 acres and zoned SU-1 PRD is located along Santa Clara. It currently consists of three parcels with 566 dwelling units. The site includes surface parking, two-stor apartment buildings and a small playground. A block of four-plexes is located along Dickerson on land zoned C-2.

3.2 Analysis of Commercially Zoned Land

Commercial development in the area is limited and disjointed. A result of the significant lack of commercial development in the Sector Plan boundary is that area residents must drive to other areas for restaurants, stores and other neighborhood services. Much of the land zoned for commercial use within the Plan area is located along Yale Boulevard, but many of these C-2 zoned parcels have never been developed and remain vacant. These lots are narrow and deep with no alley access. The southern portion of Yale toward Gibson, in the SU-1 zoned Yale Business Park, has seen recent development with the introduction of several national hotel chains and an Applebee’s frequented by airport travelers as well as area residents and local work force.

One of the issues with the current retail development pattern along south Yale is the abundance of similar services and the lack of retail diversity. Within the seven block section of Yale included in the Plan area, are three convenience stores, several auto repair shops and related services. Most residents in the area express a need for more restaurants, neighborhood services and post-event entertainment venues. Some unique businesses in the area include a Mosque, an upscale clothing retail store, Quarter’s restaurant and liquor store, Project Share and the Yale Art Center. The southern portion of Yale, between Ross and Gibson, has developed as a hotel/office node with two new hotels planned for the large vacant parcels along Yale, south of Ross.

Other pockets of commercial land exist within the Plan boundary. A small commercial area is located at the northwest corner of Girard and Gibson. Currently this area is zoned C-3 and includes a business park, self storage units, apartment complexes and a vacant grocery store. Another area of commercial land is located along Gibson in the south west portion of the Plan area. The majority of this land is currently vacant. A large portion of the land, which was approved for residential development and a small commercial component in 2006, is now under construction.

The area bounded by Yale/Gibson/Columbia/Ross, the Yale Business Park, is zoned SU-1 for Permissive O-1, C-2 and IP uses. The majority of the land has been built out with hotels, offices, an Elks Lodge and the State Laboratory, or has been recently permitted for hotels. Two vacant parcels in this area are state owned land and are not affected by the applied zoning.

The Fairview Memorial Cemetery, located on 43 acres at the northwest corner of Yale and Santa Clara is zoned for SU-1 for Cemetery. The Cemetery is the burial site for several Spanish American war veterans, and is home to the Jewish Cemetery, dating to the early 1800s, located in the site’s Northwest corner. The cemetery was recently purchased by Daniels Family funeral services, which has long term plans to restore the Cemetery.
3.3 Retail Opportunity: South Yale’s Market Study

A market study for the South Yale Sector Development Plan area was commissioned in 2007 to analyze the existing and future retail opportunities of the area and to provide policy guidance related to the type of development the Plan should foster. The analysis was based on the current demographic data, area sports and entertainment event venue attendance, area employment (including the UNM Science and Technology Park), CNM student and staff populations, hotel and airport traffic, and overall trade area data.

According to the market study, based on the existing South Yale demographic makeup and the larger trade area forces, the following commercial and residential demands were determined:

**Residential Development - Future demand:**
- 2012: One mile radius will demand 500 new units (200 owner occupied, 300 renter)
- 2012: Trade Area will demand 1,850 new units

**Commercial/Retail – Future demand:**
- Under current conditions, South Yale area can support only 28,100sf of new retail by 2008.
- However, the retail potential is significantly greater with a transit-oriented, higher density, mixed use redevelopment.
- Any new retail will compete with existing retail in the South Yale Trade Area.

The Market Study also made specific recommendations for improving South Yale’s commercial demands, including:

- New mixed-use development along South Yale should incorporate medium density housing (15-25 units/acre)
- New single family residential should strive to be 1-2 story townhouses 15’-20’ wide
- New single family residential should be priced under $300,000 and be sized between 1,800-2,200 sf
- New rental units should be townhomes or garden style apartments, 600-1000 sf each
- A full service hotel complex (with mixed use retail services) should be encouraged
- Retail success is more likely with a City/UNM partnership to increase development along Cesar Chavez.

The results of the Market Study were used to guide design standards which allow for increased density, a mix of uses and compact development along the South Yale corridor in order to generate the rooftops and retail setting necessary to attract new commercial and service providers to the area.
CHAPTER SIX
Area Character and Conditions

Area Event Attendance Numbers 2007

UNM Athletics: approximately 180 +/- events each year
- The Pit (basketball):
  Men: 19 games (14,500 avg attendance)
  Women: 19 games (10,500 avg attendance)
- Lobo Field at Isotopes Park:
  40 baseball games (3,000/game)
- Football Stadium:
  8 games (30,000)
  10 graduations
- UNM Soccer:
  Men: 10 games (3,629 avg attendance/game)
  Women: 10 games (1,848 avg attendance/game)
- UNM Softball:
  10 games
- Other events:
  2 PowWOW (15,000 attendees)
  30 to 40 “special events” as well as special summer “camps”

City Isotopes Park (April-Sept):
- 72 Games (8,500 avg. attendance/game)

City BMX Park:
- Practice sessions: 3x/week: 100 riders, plus 2.5 persons per rider
- Nationals (2/year): 2,500-5000/day, 3 days, plus 2.5 persons per rider
- State Championship (1/year): 325 riders, plus 2.5 persons per rider
- ABA camps (June through August): 200 riders/week

South Yale Trade Area Incomes:
Median Household Income (Trade Area):
- $36,200 (moderate)
Average Household Income (Trade Area):
- $65,200 (moderate)
25% (5,750) of households in trade area earn over $75,000 (high)

South Yale Populations:
UNM’s 26,000 students and employees
CNM’s 20,000 students (15,000 FTE) and 1,000 employees
Strong residential population density in proximity to Plan area:
- 13,725 persons within 1 mile
- 54,600 within larger trade area
- 23,000 housing units within the Trade Area (50% renter occupied)
- 7,550 housing units within one mile area (60% renter occupied)
Albuquerque Sunport:
- 6.5 million passengers per year/1,000 flights per week
Area hotels:
- Over 2,000 hotel rooms within 1 mile of Plan area, with occupancy rates of 100%

Figure 46: Trade Area Incomes
4.0  Transportation and Traffic
4.1  Street Connectivity and Pedestrian Accessibility
Connectivity within the plan area is problematic. Due to large portions of institutionally held land and a local cemetery, many streets in the area are not through-streets. Access to Yale from the Victory Hills neighborhood is limited to Ross and Kathryn. The only direct access from University Blvd to Yale occurs along Cesar Chavez and Gibson. Residents of the University Village trailer park and Lomas Del Cielo housing area only have access to University Blvd. Area bicycle and pedestrian routes are not clearly marked and are not part of a cohesive neighborhood network. An abandoned alley runs north/south from Kathryn behind the Loma Linda Community Center site to International Blvd.

4.1.1  Pedestrian Crossings on Cesar Chavez
Pedestrian access to City sports venues from UNM parking lots requires crossing Cesar Chavez, a heavily traveled minor arterial. Currently, the only crossing points with a traffic signal are located at the University intersection and the Yale intersection. As a result, large groups of pedestrians cross mid-block on event days, creating unsafe conditions for pedestrians and traffic snarls for both visitors and residents.

4.1.2  Community Center and Sunport Pool Access
Pedestrian access from the adjacent community is limited to the Loma Linda Community Center and Sunport Pools. Residents on the west side of Yale must cross at the off-set intersection at Kathryn to access Loma Linda Community Center and have no direct access to Sunport pool.

4.1.3  APS School Crossing Zones
The Lowell Elementary School boundary is bisected by Yale which, with its current speeds and limited pedestrian crossings, makes access to the school by young children dangerous. There are currently two school crossings on Yale: an intersection crossing at Kathryn and a marked crossing and crosswalk at Ross. According to APS, the high-speed traffic conditions along Yale are hazardous enough to warrant busing children less than 1/2 mile from the school.

4.2  Traffic Speeds
Traffic moves quickly along Yale Blvd from Gibson until it narrows above Avenida Cesar Chavez. Although this provides convenient access from the Airport to the UNM area, fast moving traffic creates an unfriendly and sometimes dangerous environment for pedestrians, resulting in limiting appropriate neighborhood scale commercial growth for nearby residents and visitors alike. Currently, there are three separate speed zones along Yale from Gibson to St. Cyr: a 45 mph zone, a 40 mph zone, and 35 mph zone north of Cesar Chavez. Traffic speeds along Cesar Chavez are posted at 45 mph, however traffic travels significantly faster.

4.3  Problematic Intersections
The existing street patterns on the west side of Yale are not in alignment with the existing street grid on the east side of Yale. As a result, streets do not align as they cross Yale. Of particular concern is the signalized intersection at Kathryn where it is unclear where to stop for the light heading southbound. In addition, this intersection is problematic in that the access to the service station on the southwest corner is located in the middle of the intersection and exiting traffic does not have to respond to the traffic signal. The intersection at Ross and Yale also has alignment problems. Though there is no signal, it is a designated school crossing and difficult for pedestrians to navigate. An existing pedestrian refuge interferes with vehicular movement through the intersection.

5.0  Drainage Issues
There currently exists a significant east-west grade change on the commercial lots running along the west side of Yale Boulevard. This grade change causes surface water to flow down onto adjacent residential properties, often flooding basements and yards. The lack of a comprehensive drainage solution requires individual commercial lot owners along Yale Boulevard to pond on-site, significantly limiting the development potential of these lots.
6.0 South Yale’s Regulatory Framework
In developing the South Yale Sector Development plan, adopted City plans were reviewed for their policies and goals guiding development in the area. The Sector Development Plan (or Plan) complies with and furthers the goals and policies of other adopted plans, including:

6.1 Albuquerque/Bernalillo County Comprehensive Plan
The Comprehensive Plan provides general policy framework for development in the City and County. It designates the South Yale area as part of the City’s Established Urban Area with directives for compact mixed-use and higher density development along its primary streets. The goal of the Plan’s Centers and Corridors policies is to create market conditions which support development of activity centers and corridors that contribute to the redevelopment of these designated areas. By developing and connecting transit corridors with activity centers vehicle needs are balanced with other forms of transportation that reduce the auto dependency, trip times, and increase citizens usage of multi-modal transportation services, including public transit, bicycle and pedestrian opportunities.

The Yale Sector Development Plan represents an opportunity to create the mix of land uses and densities that promotes the use of transit and links designated enhanced transit corridors with connections to major activity centers.

Nearby Comprehensive Plan designated “Major Activity Centers”:
- Sunport
- University of New Mexico
- CNM
- Downtown
- Nob Hill

Comprehensive Plan designated “Special Activity Centers”:
- UNM Sports Complex
- Isotopes Park, City Veloport

Comprehensive Plan designated “Enhanced Transit Corridors”:
- University Blvd
- Gibson Blvd
- Yale Blvd (south of Gibson)

6.2 Planned Growth Strategy
The Planned Growth Strategy was adopted in 2002. It proposes a strategy for creating new vitality in existing neighborhoods by developing various regulatory and non-regulatory mechanisms to encourage quality community-based infill development and redevelopment. As part of its overall implementation strategy, the PGS encourages the adoption of Smart Growth and Traditional Neighborhood Development principles, codes and processes for inclusion into local governing plans, such as Sector Development Plans like the South Yale Sector Plan and Metropolitan Redevelopment Plans. The Traditional Neighborhood Development principles advocated by the PGS include: Creating economic and social vitality by allowing a mixture of complementary land uses including housing, retail, offices, commercial services, and civic uses; developing commercial and mixed-use areas that are safe, comfortable and attractive to pedestrians; reinforcing streets as public places that encourage pedestrian and bicycle travel; encouraging efficient land use by facilitating compact, high-density development and minimizing the amount of land that is required for surface parking; and facilitating development (land use mix, density and design) that supports public transit.

6.3 The City of Albuquerque Comprehensive Zoning Code
The Zoning Code regulates land uses, densities, and building location and height. The South Yale Sector Development Plan utilizes the Zoning Code’s land use zones as an organizing element, but tailors the permitted and prohibited uses to meet the goals of the South Yale community.
6.4 Transportation Plans

6.4.1 Long Range Bikeways System Map
The Middle Region Council of Governments Long Range Bikeway Plan designates Buena Vista Drive as a Bike Route sharing the street with the traffic lane, and University and Gibson Boulevard as Bike Lanes, with a designated lanes separated from the vehicular traffic lane.

![Figure 47: Long Range Bikeways System Map](image)

6.4.2 Long Range Roadway Plan
The Middle Region Council of Governments’ Long Range Roadway map designates Yale Boulevard, University Boulevard and Cesar Chavez as minor arterials, Girard Boulevard and Santa Clara as Collectors, and Gibson Boulevard as a limited access Principal Arterial. As the Sector Plan proposes no modifications to area street designs which would impact capacity, no changes to the streets classifications are required.

![Figure 48: Long Range Roadway Map](image)
6.4.3 Albuquerque Modern Streetcar
The City's modern streetcar project has been in planning since 1999, when it was initially envisioned as a light rail system. Unlike light rail, streetcar systems cost substantially less and are designed for local, shorter trips with slower speeds and more frequent stations. Streetcars are able to share a lane with automobiles, allowing them to fit into a lane of traffic without altering traffic flow. Because the streetcar flows with the traffic, like a bus, and is subject to the same traffic signals as other vehicles, it operates safely in high-pedestrian areas.

Streetcar systems have the potential to activate urban spaces and attract economic development. As seen in cities across the country, modern streetcars have historically acted as a catalyst to higher density, mixed-use, pedestrian-oriented development along their routes and support long-term economic growth and development due to their fixed nature. A primary principle of streetcar systems is their capacity to reduce the amount of parking required by users from 30-50%. Decreasing parking allows for more efficient use of land, allowing more building per sf, and creating greater financial feasibility for parking structures in the long-term.

The proposed routing for Albuquerque's modern streetcar will take the streetcars along Cesar Chavez and Yale Boulevard in their “Downtown – Sunport” route. This routing was identified for its proximity to multiple sports related venues, for the availability of underutilized land along Yale Boulevard with significant redevelopment potential, and nearby park and ride facilities, including UNM student parking and the Loma Linda Community Center. Within the Plan area, proposed stops identified in a 2006 Stop Study Report are located approximately ¼ miles intervals and occur along Cesar Chavez at University, at the UNM Football stadium and at the Veloport. Along Yale Boulevard, stops are located at Cesar Chavez, Kathryn, Ross and north of Gibson.

Along Yale, streetcar stops will occur at bulbouts equal in length to about 2-3 parking spaces for a single streetcar stop. Stops are programmed to include: Benches, Shelter/Canopy, Platforms, Bike Racks, Trash Cans, landscaping, and public art.

6.5 Other Plans Influencing the Sector Plan’s Development
In addition to the existing adopted plans and policies guiding development in the area, South Yale is uniquely located in an area where the master plans of large institutional landholders, including the City of Albuquerque, UNM, CNM and Albuquerque Public Schools, play a significant role in shaping the urban character of the area.

6.5.1 South Yale MRA Designation and Plan
The South Yale Plan area received a Metropolitan Redevelopment Area designation in early 2007. It received this designation from the Albuquerque City Council upon recommendation by the Albuquerque Development Commission, based on findings that “the presence of a substantial number of deteriorated structures, unsafe conditions, deterioration of site and other improvements, obsolete and impractical planning and platting and low levels of commercial activity and redevelopment which substantially impair and arrest the sound growth and economic well being the area.” The designation allows the area to receive funding for metropolitan redevelopment projects to assist in the area’s redevelopment, based on the development and approval of a Metropolitan Redevelopment Plan. In addition, the designation allows Albuquerque Public Schools to solicit additional state funding for educational programs at Lowell Elementary School, and potentially allows developers building within the MRA Plan area to receive reductions in their City Impact Fee assessments.

6.5.2 UNM South Campus Masterplan
The 2007 UNM South Campus Masterplan covers the large parcels of land owned by the University of New Mexico. The plan divides the South Campus
into two areas: The Research Park, located within the northwest portion of the South Campus and the Athletics South Campus. The masterplan list of potential projects for Research Park include a hotel development, parking garage development, as well as continued Research Park development. According to the masterplan, the large area of vacant land located south and west of the Pit was not included in the planning effort; instead the plan identified the area as an opportunity for future expansion of the Athletics South Campus.

Recognizing that the existing character of the area is defined by isolated facilities surrounded by parking, the masterplan identifies as its primary objective “unifying the South Campus in a manner similar to the main academic campus through an emphasis on the pedestrian oriented design.” The plan sets out circulation concepts and landscape concepts to improve pedestrian navigation in the area, create a more pleasurable walking experience and establish a campus identity. The plan also addresses aesthetic modifications to the structures in the area as a mechanism for creating a more visually pleasing environment and creating a unique South Campus identity.

The masterplan acknowledges neighborhood concerns related to the current aesthetic character as well as event impacts and neighborhood livability. Some of the masterplan’s suggestions for addressing those concerns as well as larger South Campus improvement issues include:

- Enhancing area landscaping
- Removing and replacing chainlink fencing with attractive fencing material and landscape
- Introducing additional enhanced crossing zones to handle pedestrian traffic
- Developing the corner property that fronts on Buena Vista and Avenida Cesar Chavez with a use that can both serve the neighborhood and the thousands of students who use the shuttle service from the east parking lot to the main campus
- Introducing an area wayfinding system
- Developing opportunities for pedestrians to linger after a game including daily use restaurant, additional meeting places and some hospitality areas
GLOSSARY

Access. Permission or ability to enter, approach or pass to and from public and private property.

Access Easement. Easement for vehicular or pedestrian access across private property.

Accessibility. Approachability and usability by people with disabilities. Degree of compliance with the federal Americans with Disabilities Act.

Amenities, pedestrian. Pedestrian amenities serve as informal gathering places for socializing, resting, and enjoyment of a particular area and contribute to a walkable district. Typical amenities include extra wide sidewalks, street trees, sitting spaces, weather protection (awnings or canopies), pedestrian scale lighting, bus stop seating, etc.

Articulation. Off-sets, projections, recessed walls, windows, doors, etc. that provide variation to a building façade.

Automobile-dependent uses or activities. Land uses that contain automobiles and/or motor vehicles as integral parts of the uses.

Big box store. Large retail store, usually over 35,000 square feet, offering wide choice, often at reduced prices.

Bollard. A post of metal, wood, or masonry that is used to separate or direct traffic (vehicles, pedestrians and/or bicycles). Bollards are usually decorative and may contain sidewalk or pathway lighting.

Build-to-Line. An alignment established a certain distance from the curb line to a line along which the building shall be built. Front porches and handicap ramps are exempt. Front porches and handicap ramps are exempt.

Building mass. The aggregate size of a building, or the total height, width, and depth of all its parts.

Building orientation to the street. Primary facade of building fronting/facing street.

Building Type. The category of a building, as described on pages 41-46.

Bulb Out or Curb Extension. This is a traffic calming measure, intended to slow the speed of traffic and increase driver awareness. They also allow pedestrians and vehicle drivers to see each other when vehicles parked in a parking lane would otherwise block visibility. A curb extension comprises an angled narrowing of the roadway and a widening of the sidewalk. This is achieved using the addition of pavement.

(CIP). Capital Implementation Program

Clear Height. Unobstructed vertical distance between two objects.

Compact development. Buildings, parking areas, streets, driveways, and public spaces are developed in a way that shortens trips, and lessens dependence on the automobile; thereby reducing levels of land consumption, energy use, and air pollution. Compact development promotes full utilization of urban services such as water lines, sewers, streets, and emergency services, by taking advantage of existing public facilities and minimizing the need for new facilities.

Density. A measurement of the number of dwelling units in relationship to a specified amount of land.

Development intensity. The amount or magnitude of a use on a site or allowed in a zone. Generally, it is measured by floor area. It may also be measured by such things as number of employees, amount of
production, trip generation, or hours of operation.

**Dimensional Standard.** Standards relating to numerical measurement, including but not limited to setback, lot area, height, required open space, etc.

**(DRB).** Design Review Board

**Drive aisle/Driveway.** An improved (e.g., paved) driving surface for one line of vehicles.

**(EPC).** Environmental Planning Commission.

**Façade.** The face or front of a building.

**Fenestration.** The openings which form a part of a building façade.

**Forecourt.** The outer or front court of a building or of a group of buildings which may contain a vehicular drop-off or parking.

**Frontage Types.** The category of building facades, as described on pages 47-48.

**Full Service Grocery.** A retail establishment which occupies at least 5,000 square feet, where most of the floor area is devoted to the sale of food products for home preparation and consumption, which typically also offers other home care and personal care products, and which is substantially larger and carry a broader range of merchandise than convenience stores.

**Human scaled.** Site and building design elements that are dimensionally related to pedestrians, such as: small building spaces with individual entrances (e.g., as is typical of downtowns and main street developments); larger buildings which have articulation and detailing to break up large masses; narrower streets with tree canopies; smaller parking areas or parking areas broken up into small components with landscaping; and pedestrian amenities, such as sidewalks, plazas, outdoor seating, lighting, weather protection (e.g., awnings or canopies), and similar features. These features are all generally smaller in scale than those which are primarily intended to accommodate automobile traffic.

**Infill and redevelopment.** The development of vacant, bypassed or under utilized lands in an area that is mainly developed.

**Mixed use development.** Development in which multiple land uses are permitted such as retail and residential.

**(MRCOG).** Mid-Region Council of Governments.

**Node.** An area of concentrated activity, often involving higher densities and a mix of uses, that encourages alternatives to automobile travel.

**Package Liquor Sales:** Retailing of Alcoholic drink, for off premise consumption.

**Pedestrian-friendly/pedestrian-oriented.** Development which is designed with an emphasis primarily on the street sidewalk and on pedestrian access to the site and building, rather than on auto access and parking areas. The building is generally placed close to the street and the main entrance is oriented to the street sidewalk. There are generally windows or display cases along building façades which face the street. Typically, buildings cover a large portion of the site. When parking areas are provided, they are generally limited in size and they are not emphasized by the design of the site.

**Plaza.** A public square or extra-wide sidewalk (e.g., as on a street corner) that allows for special events, outdoor seating, sidewalk sales and similar pedestrian activity.
**Primary entrance.** The entrance to a building that most pedestrians are expected to use. Generally, each building has one primary entrance. It is the widest entrance of those provided for use by pedestrians. In multi-tenant buildings, primary entrances open directly into the building’s lobby or principal interior ground level circulation space. When a multi-tenant building does not have a lobby or common interior circulation space, each tenant’s outside entrance is a primary entrance. In single-tenant buildings, primary entrances open directly into lobby, reception, or sales areas.

**Right-of-way (ROW).** Land that is owned in fee simple by the public, usually for transportation facilities.

**Streetscape.** The portion of the right-of-way that is between the lot line and the edge of the vehicular lanes. The principal streetscape components are curbs, sidewalks, planters, street trees and street lights.

**Structured parking.** A covered structure or portion of a covered structure that provides parking areas for motor vehicles. It includes parking on top of a structure where there is gross building area below the parking, but nothing above it. The structure can be the primary structure for a Commercial Parking facility or be accessory to multi-dwelling residential, commercial, employment, industrial, institutional, or other structures.

**Transportation mode.** The method of transportation (e.g., automobile, bus, walking, bicycling, etc.)

**Urban.** Relating to, characteristic of, or constituting a city.

**Urban design.** The conceptualization of the built environment in response to human needs and desires.

**Velodrome.** A venue for bicycle races on an elliptical track. May include stadium seating.

**(ZHE).** Zoning Hearing Examiner

SOUTH YALE PLANT LIST

Street Trees and Parking Lots
Native:
Netleaf Hackberry/Celtis reticulata
Arizona White Oak/Quercus arizonica
Fragrant Ash/Fraxinus cuspidata
Chinkapin Oak/Quercus muhlenbergia
Texas Red Oak/Quercus texana
Arizona Walnut/Juglans major
Arizona Sycamore/Platanus wrightii
Soapberry/Sapindus drummondii
Thornless Honey Mesquite/Prosopis glandulosa

Non-Native:
Common Hackberry/Celtis occidentalis
Purple Robe Locust/Robinia ambigua "Purple Robe"
Chinese Pistache/Pistacia chinensis
Lacebark Elm/Ulmus parvifolia

Small Space Trees:
Native:
Netleaf Hackberry
Oklahoma Redbud/Cercis reniformis
Mexican Redbud/Cercis mexicana
Desert Willow/Chilopsis linearis
New Mexico Olive/Forestiera neomexicana
Prairie Flame Sumac/Rhus lanceolata
Idaho Locust/Robinia ambigua
Mexican Elder/Sambucus drummondii
Jujube/Zizyphus jujube

Evergreen:
Texas Mountain Laurel/Sophora secundiflora
Texas Red Oak/Quercus texana

Non-Native:
Chitalpa/Chitalpa tashkentensis
Japanese Pagoda/Sophora japonica
Golden Raintree/Koelreuteria paniculata
Vitex/Vitex
Chinaberry/Melia azedarach
Russian Hawthome/Crataegus ambigua
Mimosa/Albizia julibrissin Rosea
Crape Myrtle/Lagerstroemia sp.

Shrubs
Native:
Fernbush/Chamaebatieria millefolium
Dalea sp/Dalea sp
Dune Broom/Parnella filifolia
Marrow/Parthenium incanum
Scarlet Sumac/Rhus glabra
Littleleaf Sumac/Rhus microphylla
Threeleaf Sumac/Rhus trilobata

Non-Native:
Butterfly bush sp/Buddleia davidii sp
Bird of Paradise/Caesalpinia gilliesii
Brooms/Genista sp.
Texas Sage sp/Leucophyllum sp.
Shrubs Continued
Native Evergreen:
Fringed sage/Artemisia frigida
Blue algerita/Berberis syn. Mahonia fremontii
Damianita/Chrysactinia mexicana
Jointfir/Ephedra sp.
Turpentine Bush/Ericameria laricifolia
Texas Sage/Leucophyllum sp.
Evergreen Sumac/Rhus virens
Mexican Blue Sage/Salvia chamaedryoides
Mojave Sage/Salvia dorrii
Arizona Rosewood/Vauquelinia californica sp.
Non-Native Evergreen:
Purple Rockrose/Cistus purpureus
Grayleaf Cotoneaster/Cotoneaster buxifolia
Silverberry/Eleagnus pungens
Dwarf Ephedra/Ephedra
Cuny Plant/Helichrysum angustifolium
English Lavender/ Lavandula angustifolia
Grosso, Alba Lavenders/Lavandula intermedia sp.
Lavender Sage/Salvia lavandulifolia
Rosemary cultivars/Rosmarinus sp.

Accents/Succulents
Agave species/Agave
Sotol/Dasylirion wheeleri
Red and Yellow Yucca/Hesperaloe sp
Beargrass/Nolina sp
Cholla/Opuntia sp
Yucca sp/ Yucca sp.

Grasses
Native:
Purple Three Awn/Aristida purpurea
Bluestem sp/Andropogon sp.
Blue Fescue sp/ Festuca sp
Muhly sp/Muhlenbergia sp
Switchgrass sp/Panicum virgatum
Sacaton sp/Sporobolus sp

Non-Native Grasses:
Karl Foerster Feather Reedgrass/Calamagrostis acutiflora
Hardy Fountain Grass/Pennisetum alopecuroides
