Attendees: Dr. Kim Pruett, Dr. Ian Medoro, Dr. Dorothy Habrat, Dr. Gurujot Khalsa, Deputy Chief Chris Ortiz, Dave Chapek, Capt Robert Laprise,

Motion to approve agenda by Dr. Medoro second by Dr Khalsa
motion approved.

Review of May minutes and motion to approve minutes

Motion made by Dr. Habrat and seconded by Dr. Khalsa

Motion approved

Visitor-Lovelace cardiac team with Dr. Yao and Maria Attencio
Sandoval Regional Medical Center representatives

Hospital Systems Reports

Lovelace- Dr. Raymond Yao reviewing ECMO protocol. Lovelace isn't able to commit to the standards in the protocol at this time but asking to keep them in mind as they have a cardiogenic shock program.

Please keep them in mind in the future as they have infrastructure constraints. No other updates

VA- VA is of the opinion that if they can't get the service at the VA they will send them out to the community to get treatment. Dr. Khalsa is trying to give the community's perspective to the VA Administration. Leadership turnover but nothing else to report.

Presbyterian- High volumes at the ED's and at the Pres Now's as well. High for the summer.

UNM- 130% capacity at the ED and Peds is full as well.

Old Business

None

New Business

PAC-Chief Ortiz-No Quorum potential for upcoming meetings is electrocution guideline. Talked about Femoral IO's as well.

Dr. Pruett-there is good info on Tibia IO failure rates and there is a potential for Femoral IO's. Review the Femoral IO data and get the rep's to send product.

Sandoval Regional (SRMC)-Just received their Trauma III Designation. Proved that they are able to manage the pt's they get. They can help off load many of the lower level trauma to help the system. Provided resource page uploaded to the end of these minutes. Early notice from EMS helps them activate their teams. Testing their transfer criteria to make sure they are able to keep patients. Clarification of what patients will be accepted. Dr. Medoro- We may be able

to add SRMC to the MCI protocol. Any patient's thought to be able to go to Rust and LL West Side they can be diverted to SRMC.

Lovelace-

Research Updates/Discussion

Amend Mossimo- Cerebral Oximetry study- 150-200 pt's in the trial so far. Would like to add pupilometry to help to identify early morbidity. Don't want to burden the crews on scene but to restrict this to the EMS Dr.'s.

Motion to adjourn by Dr. Khalsa second by Dr. Medoro
