- Step 1- get Roxy what she needs to fill in blanks on her spreadsheet

- Build on what we have in place.
 - "simpler program" than Tablo, potentially Excell
 - Most common dispatch code

 - How we're doing on reporting the last known well
 - Time to TPA
 - Thrombectomy... yes or no
 - How is our LAMS score performing in recognizing LVOs
17. *Ian-*
- Where are we in our performance
 - Putting this into visually dynamic representation
 - Right now what can we use
 - What can we develop it in to
 - Where are we as a system
 - What performance improvement we have after that
18. *Michael-*
- Times, volumes, dispositions is mostly what we have currently

- What are the clinical metrics we care about that need to be added
 - Preserve workflow while adding in relative information that's going to give us the answers that we want
19. *Ian-*
- How accurate is our LAMS prediction
 - Are we doing the right thing and getting people to the right place
20. *Roxy-*
- Has extracted a lot of this information, just doesn't have a column for it
 - Can get MRI results, whether or not there was TPA, or whether or not there was a Thrombectomy from Lovelace and Pres
