

Technical Approach: Opportunities for Innovation

Explain how you will incorporate new ideas and practices in your design that has the potential to empower small/minority/disadvantaged groups.

If your construction cost estimate comes in at/under final cost, how does that affect our end-users? How does the project encourage non-traditional groups to get more involved in their/our community?

Tell us how your design will lend itself to cultural/community inclusivity and sensitivity. After the designer is long gone, the project needs to continue to foster a desire and comfort for our diverse community to continue engaging with the project. This is your opportunity to leave your mark in a uniquely culturally diverse City.
